Modification history

| Date | Comments / modifications |
|---------------------|---|
| 29 May 2015 | Original version |
| 31 Aug 2015 | Plus chapters on AO, AI-U, AI-I |
| 11 Nov 2015 | Plus chapter on DI16/DO16 bus coupler |
| 01 Mar 2016 | Plus chapter on Counter/Posi2, new UL logo |
| 07 Mar 2016 | Analogue modules corrected |
| 26 Apr 2016 | Addition to 2-row digital terminals: L+ and L- are both internally jumpered (5.3.1) Note on installation position added (Position) Note added on order of modules in multi-FIO systems (Order of Modules in Multi-FIO Systems) Connector sleeves for Weidmüller connector (General Instructions) |
| 06 June 2016 | Chapter Relay Modules added – (5.3.9 / 5.3.12) |
| 10 July 2016 | Tables of sensor values revised (5.4) |
| 10 Nov 2016 | Chapter Thermal Modules revised (5.4.8 / 5.4.9) |
| 25 Nov 2016 | Data types modified in chapter Counter2 CounterPosi2 (5.5.1) |
| 17 Jan 2017 | Chapter Analogue Output Modules revised (5.4.2 / 5.4.3) |
| 20 Jan 2017 | Chapter General Instructions revised under connector sleeves |
| 23 Feb 2017 | Note on unused encoder signals in chapter Counter2 CounterPosi2 (5.5.1) |
| 03 Feb 2017 | Table of sensor values revised in chapter 5.4.2 / 5.4.3, UL logo added for 16/16 bus coupler added to chapter 5.2.2 |
| 08 Mar 2017 | New thermo module sub-chapters on cold point compensation and calibration (5.4.8 / 5.4.9) |
| 21 Mar 2017 | Chapter 5.4.2 AO4-U/I - 12-Bit“ revised with regard to compatibility with the module's predecessor |
| 25 Aug 2017 | Formatting of entire Instruction Manual revised. New FIO modules added – communication modules, chapter 5.7 Technical data of complex FIO modules added (Controller/Safety/Drive/CAM) Old modules removed from manual (separate Instruction Manual on FIO V1 modules) Translation |
| 31 Aug 2017 | Inserting a note for the AI-U modules |
| 01 Dez 2017 | Device "Kuhnke FIO DO8 2A" Order number 694.452.06 ID: 190485 added |
| 02 Mar 2018 | Revision of the complete manual with regard to the Low Voltage Directive. Renaming in chapter Bus Coupler DI16 / DO16 - U24_Load to undervoltage_load and U24_Logic to undervoltage_logic |
| 14 Jan 2019 | Mounting instructions for the potential distributor added. Added information for recommended Ethernet cable. |
| 03 Jul 2019 | FIO Bus Coupler DI8 DO8 and DI8 DO4 added. Info about the new Safety Modules added. |
| 28 Jan 2020 | Design change and analog module Kuhnke AI4 12Bit / AO4 16Bit CoE added |
| 29 Jan 2021 | Minor corrections in the document |
| 30 Mar 2021 | Modules DI16 2-wire and DO16 2-wire added |

1.2 About this Manual

This technical information is primarily directed to system designers, project engineers and device developers. It does not contain any availability information. We reserve the rights for errors, omissions and modifications. Pictures are similar.

Limitation of Liability

Specifications are for description only and are not to be understood as guaranteed product properties in a legal sense. Exact properties and characteristics shall be agreed in the specific contract. Claims for damages against us - on whatever grounds - are excluded, except in instances of deliberate intent or gross negligence on our part.

Terms of Delivery

The general conditions of sales and service of Kendrion Kuhnke Automation GmbH shall apply.

Copyright

© Kendrion Kuhnke Automation GmbH

This instruction manual is proprietary and protected by copyright.

No part of this document may be reproduced or copied in any way or by any means except expressly permitted in writing by Kendrion Kuhnke Automation GmbH.

Microsoft®, Windows® and the Windows® logo are registered trademarks of Microsoft Corp. in the USA and other countries. EtherCAT® is a registered trademark and patented technology, licenced by Beckhoff Automation GmbH, Germany. Further information about the PLCopen organisation is available at www.plcopen.org. CiA® and CANopen® are registered joint brands of CAN in Automation e.V. Title to all companies and company names mentioned heron as well as to products and product names is held by the respective enterprises.

CODESYS V3® is a product of 3S-Smart Software GmbH.

Warranty

Warranty is subject to the provisions of the conditions of sale of Kendrion Kuhnke Automation GmbH or any contractual agreements between the parties.

Manual Objective and Organisation

This manual describes the EtherCAT slave IO modules of Kuhnke FIO. These modules provide the EtherCAT master with the sensor details and operate the actuators. Other modules control the communication with other systems.

The EtherCAT master control unit decides how to configure the network and create the control program. This manual aims to introduce you to using the modules.

The examples are preferably based on CODESYS version 3 which has an EtherCAT master and an EtherCAT configuration utility. The procedures may change if you are using other tools.

For in-depth knowledge of IEC 611131-3 programming, please refer to the CODESYS online help engine and the references listed below.

CODESYS beginners may benefit from the comprehensive training offerings of 3S-Smart Software Solutions GmbH.

2 Reliability, Safety

2.1 Intended Use

For reasons of personal safety and to avoid material damages when working with or handling this Kuhnke product, you are advised to take heed of the notes and information contained in this instruction manual.

2.2 Target Group of the Instruction Manual

This instruction manual contains all information necessary for the use of the described product (control device, control terminal, software, etc.) according to instructions. It is written for qualified design, project planning, servicing and commissioning experts. For proper understanding and error-free application of technical descriptions, instructions for use and particularly of notes of danger and warning, extensive knowledge of automation technology is compulsory.

2.3 Intended Use

Kuhnke's products are designed, developed and manufactured for standard industrial use. They must not be used for any other purposes than the ones specified in the catalogue or the associated technical documentation. Proper and safe operation depends on the products being transported, stored, lined up, mounted, installed, put into service, operated, and serviced correctly. Ambient conditions must be within the admissible limits. Notes and information in the associated documentation apply at all times.

2.4 Transport and Storage

At times of transport and storage, protect Kuhnke FIO Module against inadmissible exposure such as mechanical stress, temperature, humidity and/or aggressive atmospheres. Transport and store Kuhnke FIO Modules only in its original packaging if possible.

Verify that the contacts are neither soiled nor damaged when consigning the unit to stock or re-packaging it. Keep and transport Kuhnke FIO Modules in a container/packaging ensuring electrostatic discharge (ESD) compliance. Some parts of the units are sensitive to ESD and may be damaged if handled inappropriately. Thus, best transport practice is to place open assemblies in statically shielded transport bags with a metal coating which avoid contamination by amines, amides or silicone. When putting Kuhnke FIO Modules into service and performing any maintenance, you should also take the appropriate precautions against electrostatic discharge.

| | |
|--|----------------|
|  | CAUTION |
| <i>Electrostatic discharge</i> | |
| <i>Destruction of or damage to the unit.</i> <ul style="list-style-type: none">⇒ Transport and store FIO Safety I/O in its original packaging.⇒ Ensure that the ambient conditions are as specified at all times during transport and storage.⇒ Handle FIO Safety I/O in a well-earthed environment (persons, place of work, packaging).⇒ Do not touch electrically conductive parts such as data contacts. Some of the electronic components may be destroyed if exposed to electrostatic discharge. | |

| | |
|--|---------------|
|  | DANGER |
| <i>Only use devices that are in perfect condition, ie that they do not show any transport damage, fluid effects or other damage</i> | |

2.5 Reliability

Reliability of Kuhnke products is brought to the highest possible standards by extensive and cost-effective means in their design and manufacture.

These include:

- selecting high-quality components,
- quality agreements with our suppliers,
- actions to avoid static charges when handling MOS circuits,
- worst case planning and design of all circuits,
- visual inspections at various stages of fabrication,
- computer-aided tests of all assemblies and their interaction in the circuit,
- statistical assessment of the quality of fabrication and of all returned goods for the immediate taking of appropriate corrective actions.

2.6 Hazard and other Warnings

Despite the actions described in section 2.4, the occurrence of faults or errors in electronic control units - even if most highly improbable - must be taken into consideration.

Please pay particular attention to the additional notices which we have marked by symbols throughout this instruction manual. While some of these notices make you aware of possible dangers, others are intended as a means of orientation. They are described further down below in descending order of importance.

Every alert and hazard warning is made up as follows:

Type and source of risk

Potential consequences of non-observance

⇒ Preventive measures

| | |
|---|---------------|
|  | DANGER |
| <i>A DANGER warning makes you aware of an immediately hazardous situation which WILL cause a serious or fatal accident if not observed.</i> | |

| | |
|---|----------------|
|  | WARNING |
| <i>A WARNING makes you aware of a potentially hazardous situation which MAY cause a serious or fatal accident or damage to this or other devices if not observed.</i> | |

| | |
|---|----------------|
|  | CAUTION |
| <i>A CAUTION alert makes you aware of a potentially hazardous situation which MAY cause an accident or damage to this or other devices if not observed.</i> | |

| | |
|---|-------------|
|  | NOTE |
| <i>A NOTE makes you aware of a potentially hazardous situation which MAY cause damage to this or other devices if not observed.</i> | |

Other Notices

| | |
|--|--------------------|
|  | Information |
| <i>This symbol draws your attention to additional information concerning the use of the described product. This may include cross references to information found elsewhere (e.g. in other manuals).</i> | |

2.7 Safety

Our products normally become part of larger systems or installations. The information below is intended to help you integrate the product into its environment without dangers to humans or material/equipment.

| | |
|---|---|
|  | DANGER Non-observance of the instruction manual <i>Measures for the prevention of dangerous faults or errors may be rendered ineffective or new hazard sources created.</i> <ul style="list-style-type: none"> ▪ Thoroughly read the instruction manual ▪ Take particular heed of the hazard warnings |
|  | Information <i>To achieve a high degree of conceptual safety in planning and installing an electronic controller, it is essential to exactly follow the instructions given in the manual because wrong handling could lead to rendering measures against dangers ineffective or to creating additional dangers.</i> |

Project Planning

- Recommendation for 24V DC supply: Generate as electrically safely separated low voltage. Suitable devices include split-winding transformers built in compliance with European Standard EN 60742 (corresponds to VDE 0551).
- Power breakdowns or power fades: the program structure is to ensure that a defined state at restart excludes all dangerous states.
- Emergency-off installations must comply with EN 60204/IEC 204 (VDE 0113). They must be operative at any time.
- Safety and precautions regulations for qualified applications have to be complied with.
- Please pay particular attention to the notices of warning which, at relevant places, will make you aware of possible sources of dangerous mistakes or faults.
- Relevant standards and VDE regulations are to be complied with in every case.
- Control elements are to be installed in such a way as to exclude unintended operation.
- Lay control cables such that interference (inductive or capacitive) is excluded if this interference could influence controller operation or its functionality.

Maintenance and Servicing

- Precautions regulation VBG 4.0 to be observed when measuring or checking a controller after power-up. This applies to section 8 (Admissible deviations when working on parts) in particular.
- Repairs must be carried out by specially trained Kuhnke staff only (usually in the main factory in Malente). Warranty expires in every other case.
- Only use parts approved of by Kuhnke. Only genuine Kuhnke modules must be used in modular controllers.
- Modular systems: always plug or unplug modules in a power-down state. You may otherwise damage the modules or (possibly not immediately recognisably!) inhibit their functionality.
- Always dispose of (rechargeable) batteries as hazardous waste.

Disposal

- When disposing of the FIO modules, ensure that the modules are disposed of in accordance with the applicable environmental regulations.
- Treat the packaging as recyclable paper and cardboard.

2.8 Electromagnetic Compatibility

Definition

Electromagnetic compatibility is the ability of a device to function satisfactorily in its electromagnetic environment without itself causing any electromagnetic interference that would be intolerable to other devices in this environment.

Of all known phenomena of electromagnetic noise, only a certain range occurs at the location of a given device. These kinds of noise are specified in the applicable product standards.

The design and immunity to interference of programmable logic controllers are internationally governed by standard

IEC 61131-2 which, in Europe, has been the basis for European Standard EN 61131-2.

| | |
|--|--------------------|
|  | Information |
| <p>Refer to IEC 61131-4, User's Guideline, for general installation instructions to be complied with to ensure that hardware interface factors and the ensuing noise voltages are limited to tolerable levels.</p> | |

Interference Emission

Interfering emission of electromagnetic fields, HF compliant to EN 55011, limiting value class A, Group 1

| | |
|--|--------------------|
|  | Information |
| <p>If the controller is designed for use in residential areas, high-frequency emissions must comply with limiting value class B as described in EN 55011. Fitting the controller into earthed metal cabinets and installing filters in the supply lines may produce a shielding compliant to the above standard.</p> | |

General Notes on Installation

As component parts of machines, facilities and systems, electronic control systems must comply with valid rules and regulations, depending on their field of application.

General requirements concerning the electrical equipment of machines and aiming at the safety of these machines are contained in Part 1 of European Standard EN 60204 (corresponds to VDE 0113).

Electrical Immission Safeguard

To eliminate electromagnetic interference, connect the control system to the protective earth conductor. Practice best cable routing.

Cable Routing and Wiring

Keep power circuits separate from control circuits:

- DC voltages 60 V ... 400 V
- AC voltages 25 V ... 400 V

Joint laying of control circuits is allowed for:

- shielded data signals
- shielded analogue signals
- unshielded digital I/O lines
- unshielded DC voltages < 60 V
- unshielded AC voltages < 25 V

Location of Installation

Ensure that temperatures, contaminations, impact, vibration or electromagnetic interference are no impediment to the installation.

Temperature

Consider heat sources such as general heating of rooms, sunlight, heat accumulation in assembly rooms or control cabinets.

Contamination

Use appropriate enclosures / cabinets to ensure operation of the FIO modules in a suitable environment. It is designed to prevent possible adverse effects of moisture, corrosive gases, liquids and conductive dust. Operation of an impermissibly dirty module is not permitted. Cleaning the device is also prohibited.

Impact and Vibration

Consider possible influences caused by motors, compressors, transfer lines, presses, ramming machines and vehicles.

Electromagnetic Interference

Consider electromagnetic interference from various local sources: motors, switching devices, switching thyristors, radio-controlled devices, welding equipment, arcing, switched-mode power supplies, converters / inverters.

Particular Sources of Interference

Inductive Actuators

Switching off inductances (such as from relays, contactors, solenoids or switching magnets) produces surge voltages. It is necessary to reduce these extra voltages to a minimum.

Throttling elements could be diodes, Z-diodes, varistors or RC elements. Their rating should conform to the specifications provided by the manufacturer or supplier of the actuators.

3 Introduction

3.1 EtherCAT®¹ — Ethernet Control Automation Technology

EtherCAT is the most powerful Ethernet-based fieldbus system currently available on the market. EtherCAT puts up the top speed mark, and its flexible topology and simple configuration make it the perfect means of controlling extremely fast processes. To give you a clue: 1000 I/Os can be addressed in 30 µs.

Because of its high performance, the simple wiring and its open protocol support, EtherCAT is often used as a fast motion control and I/O bus driven by an industrial PC or in conjunction with control technology on a smaller scale. EtherCAT moves beyond the limits of conventional fieldbus systems. Its interconnections between the controller at one end and both the I/O modules and drives at the other are as fast as those of a backplane bus. EtherCAT controllers thus nearly act like centralised control systems, overcoming the issue of bus transfer times that conventional fieldbus systems are burdened with.

3.2 Kuhnke FIO (Fast Input / Output)

Kuhnke FIO is a system of modules interconnecting via the backplane bus to make up a so-called EtherCAT network able to transfer process signals. For example, a Kuhnke FIO system may comprise a Kuhnke FIO controller or bus coupler plus any number of Kuhnke FIO I/O modules.

The head module (controller or bus coupler) converts the physical transfer technology (twisted pair) to LVDS (E-bus) and generates the system voltages required by the LVDS modules. The standard 100 Base Tx lines used for office network communications connect to the one side, the Kuhnke FIO I/O modules for the process signals connect to the other. This is how the Ethernet EtherCAT protocol is retained right through to the last I/O module. At the end of the modular device, the connection between the forward and return lines is automatically closed, the effect being that another 100 Base Tx line can be plugged in to connect the next EtherCAT unit to the second bus coupler port.

If the bus coupler is the last EtherCAT network station, i.e. if its RJ45 "Out" socket remains unplugged, the connection between the forward and return lines is automatically closed.

Kuhnke FIO Controller 113 and several Kuhnke FIO I/O modules

¹EtherCAT® is a registered trademark and patented technology, licenced by Beckhoff Automation GmbH, Germany.

3.3 Kuhnke FIO — Ventura FIO

Regular product update cycles include successive revisions of the Ventura FIO modules since 2014. Revisions focused on improving the ESD properties and ensuring conformity with the guidelines of ETG (power engineering association of VDE). The revised modules are therefore referred to Kuhnke FIO or FIO V2.

Kuhnke FIO and Ventura FIO are compatible if they share the same order number. If so they are interchangeable without having to modify the control programs.

Ventura FIO modules are controlled by a wide process model map.

Kuhnke FIO modules equipped with a controller such as the analogue modules are available as variants compatible with the process map control methodology of the Ventura FIO modules or as object-controlled variants (CoE - CAN over EtherCAT).

The module descriptions in this manual will make readers aware of exceptions such as the signal range of the AO4 module.

The table below lists the visible differences between Ventura FIO and Kuhnke FIO.

| Feature | Ventura FIO | Kuhnke FIO |
|---------------------------|--|--|
| Production date | | 2014, successively |
| Design | green dot | no dot |
| Module lock | green | grey |
| Unlock button (connector) | green | black |
| LED label | EtherCAT | EtherCAT Run |
| EtherCAT LED | green/red | green/off |
| LED label (RJ45) | In, Out | In L/A, Out L/A |
| Module control | process image | process image |
| | | CoE |
| Process signal plug | extra | included |
| | green unlock button (including 2-pole) | black unlock button (2-pole: screw-type) |
| | Spring return (36-pole) | Push-in (36-pole) |

4 System Description

4.1 General Service Conditions

This section describes the general requirements of installing, wiring and troubleshooting the Kuhnke FIO modules.

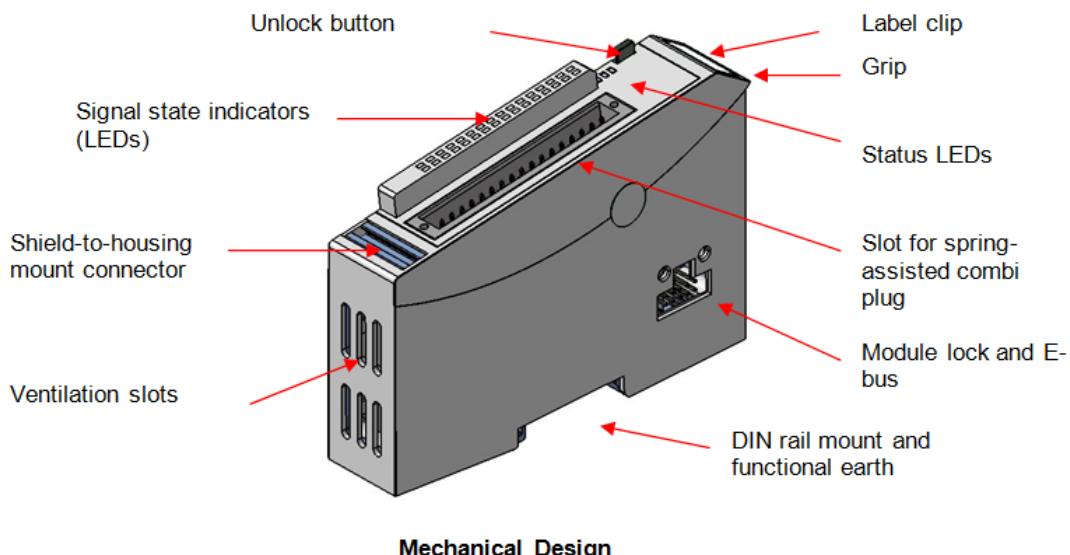

For a list of System Properties of Kuhnke FIO refer to chapter 0, page 457.

Subsequent chapters explain the specific properties of each of the modules.

4.2 Mechanical Design

The picture below shows the basic layout of the Kuhnke FIO modules.

The bus coupler and the I/O modules differ in their connectors and indicators, however.

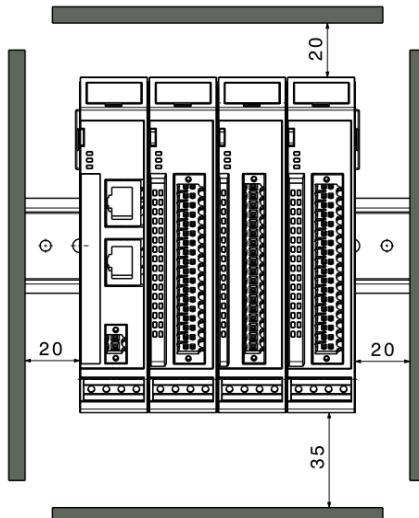

The housing mount consists of an aluminium profile with an integral snap-on device used to snap the module to a 35mm DIN rail. The housing trough including the optical fibres for the status indicators, the side face and the front is made of plastic and contains the module. The optical fibres for the signal state indicators (LEDs) are located next to the spring-assisted combi plug. They slightly protrude from the housing and allow a clear diagnosis at a glance.

Installation

Kuhnke FIO I/Os mount on 35 mm x 7.5 mm rails to DIN EN 50022.

Position

Mount with rail horizontally with the modules' multiple socket connectors pointing away from the wall. To ensure that enough air gets in through the ventilation slots, leave at least 20 mm to the top and 35 mm to adjacent devices or cabinet surfaces. Leave at least 20 mm of lateral distance to third-party units and cabinet surfaces.

Order of Modules in Multi-FIO Systems

NOTE

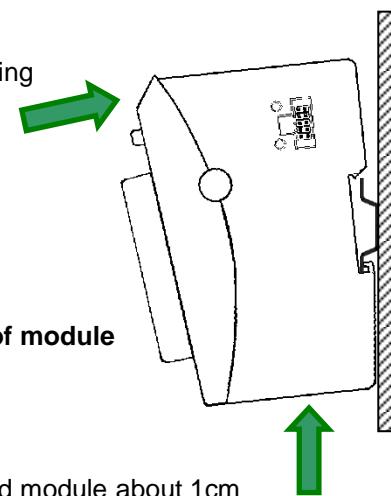

In order to ensure that the entire FIO system works properly, arrange the FIO modules by their specific E-bus load, placing the modules with the highest E-bus load immediately next to the head module (bus coupler or controller). Take account of the head module's maximum bus load.

If possible, place the Kuhnke FIO Safety I/O modules immediately next to the head module.

To Snap on a Single Module

- Push up the module against the mounting rail from below, allowing the metal spring to snap in between mounting rail and mounting area as illustrated.

Push the top of the module against the mounting wall until it snaps in.

To Interconnect Two Modules

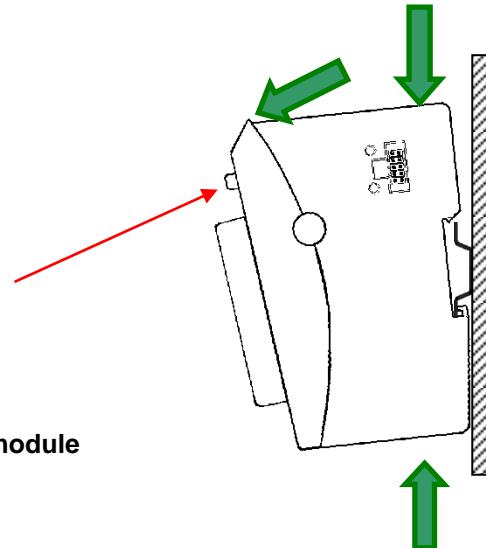

- After snapping on the first module to the rail, snap on the second module about 1cm away towards the right of the first module.
- Push the second module along the rail towards the first module until you hear the locking device snap in.

To Disconnect Two Modules

- Push down the unlock button of the module that you wish to disconnect from the module to the left of it.
- With the button still pressed, push both modules away from one another until they are about 1 cm apart.

To Take Down a Single Module

- Push the module up and against the metal spring located on the underside of the rail guide.
- Tip the module away from the rail
- as shown in the illustration.
- Pull the module down and out of the mounting rail.

4.3 System Power Supply

General Instructions

Multi-connector plugs provide many connections in a tight space.

- Unlock buttons make it easier to unplug larger connectors where there is little space.
- Screw fittings reliably hold small connectors in place.

| | |
|---|--|
|  | Note <p><i>The connectors must not be subjected to any inadmissible tension / pressure in order to avoid excessive force transmission to the board or contact problems. Avoid e.g. too strong pull due to too short wiring.</i></p> |
|---|--|

Spring-assisted multiple socket connectors support quick and easy wiring.

Single row

Tool: Screwdriver, 0.4 x 2.5 x 75 [mm] blade (DIN 5264-A)

Wires: 320 V / 10 A / 0.2 - 1.5 mm² (IEC)

Nominal current: 300 V / 10 A / 28 - 14 AWG (UL)

Supported wires with connector sleeves:

| Connector sleeve type | Wire cross section [mm ²] | | | | | | |
|---|---------------------------------------|--------|--------|--------|---------|---------|--------|
| | 0.13 | 0.25 | 0.34 | 0.50 | 0.75 | 1 | 1.5 |
| Connector sleeve w/ collar to DIN 46 228/4 | 8 / 10 | 8 / 10 | 8 / 10 | 8 / 10 | 10 / 12 | 10 / 12 | |
| Connector sleeve w/o collar to DIN 46 228/1 | 8 / 10 | 8 / 10 | 8 / 10 | 8 / 10 | 8 / 10 | 8 / 10 | 8 / 10 |
| Stripped end [mm] / sleeve length [mm] | | | | | | | |

The spring-assisted PUSH-IN connector allows you to quickly attach the wires by direct insertion without any tools. Just insert the connector sleeve end of the stripped solid or fine wire in the correct opening.

Two rows:

Wires: 320V / 13.4 A / 0.14 - 1.5 mm² (IEC)

Nominal current: 300 V / 9.5 A / 26 - 16 AWG (UL)

Supported wires with connector sleeves:

| Connector sleeve type | Wire cross section [mm ²] | | | | | | |
|---|---------------------------------------|---------|---------|---------|---------|---------|---------|
| | 0.14 | 0.25 | 0.34 | 0.50 | 0.75 | 1 | 1.5 |

| Stripped end [mm] / sleeve length [mm] | | | | | | | |

| | |
|---|---|
|  | NOTE <p><i>Do not connect the power supply lines through from one Kuhnke FIO to the next. To ensure that there is as little interference as possible, install a central power supply point and establish a star topology of as short wires as possible between the central point and Kuhnke FIO.</i></p> |
|---|---|

System Power Supply

A system connector supplies the Kuhnke FIO Safety I/O system with system power from an upstream bus coupler or a compact controller. This system power supply is used for the analysis circuitry and for bus communication only.

| | |
|---|--------------------|
|  | Information |
| <i>Please also note the connection printing on the device before the electrical installation.</i> | |

| | |
|---|----------------|
|  | WARNING |
| <p>Potentially hazardous failures due to wrong voltages supplied <i>Supplying the wrong voltages may damage or destroy the unit and may provoke potentially hazardous failures.</i></p> <p>Preventive measures:</p> <ul style="list-style-type: none">⇒ We recommend to use PELV/SELV-ready power supply units to EN50178 or EN60950-1 to supply 24 VDC to bus couplers or compact PLCs.⇒ Only use the GND terminal to connect the power supply unit to earth (PELV system). Do not use earthing variants that connect earth to +24V.⇒ Remember that, even in case of a fault, a maximum voltage of U max. < 33 V maybe supplied to these assemblies. If you cannot rule out this risk, external protection of the power supply is mandatory.⇒ To ensure that there is as little interference as possible, install a central power supply point and establish a star topology of as short wires as possible between the central point and the block of FIO modules. | |

Earth

Connect the Kuhnke FIO modules to earth by attaching the metal housing to functional earth.

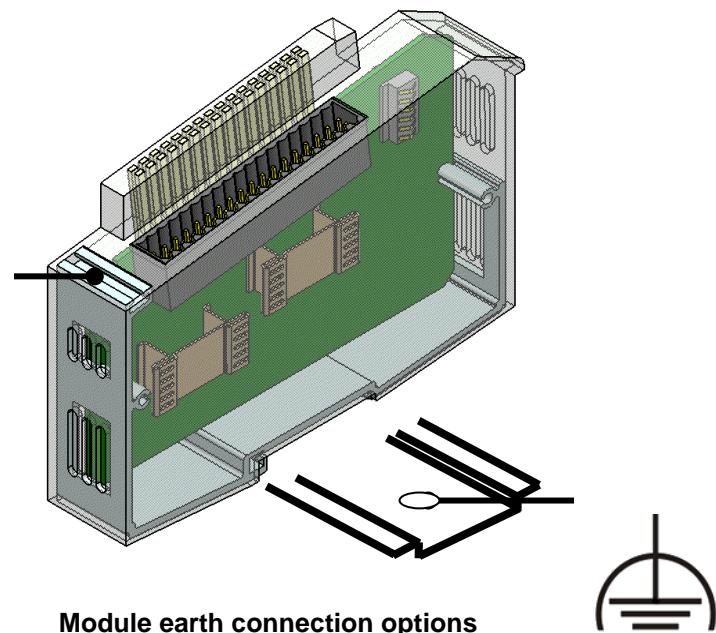

Since the functional earth connector dissipates HF currents, it is of utmost importance for the module's noise immunity.

HF interference is dissipated from the electronics board to the metal housing. The metal housing therefore needs to be suitably connected to a functional earth connector.

You will normally have to ensure that

- the connection between module housing and DIN rail conducts well,
- the connection between DIN rail and switching cabinet conducts well,
- the switching cabinet is safely connected to earth.

In special cases you may attach the earth wire straight to the module.

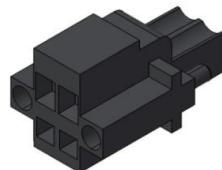

Information

Earth wires should be short and have a large surface (copper mesh). Refer to [http://de.wikipedia.org/wiki/ground_\(electronics\)](http://de.wikipedia.org/wiki/ground_(electronics)) for further details

Bus Coupler

The system power supply connects to the bus coupler through a 2-pole plug-type terminal block with a bolt flange. Since the bus coupler supplies power to both the E-bus and the logic circuits of the I/O modules, its power consumption depends on the number of I/O modules connected.

Power to the I/O module outputs is supplied separately.

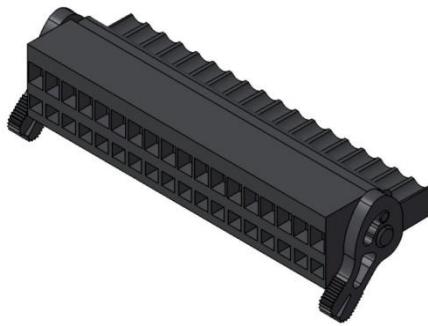

Spring-assisted plug with bolt flange for bus coupler connection

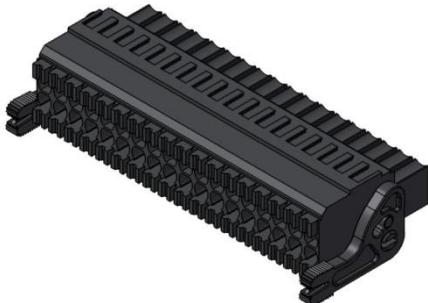

I/O Modules

The I/O supply connects to the I/O module using plug-type terminal blocks with different numbers of poles.

The bus coupler supplies power to the logic circuits of I/O modules without their own micro-controller. Modules equipped with a micro-controller may feature a power supply unit that power is supplied to through the IO connector.

Spring-assisted connector with I/O module unlock button

Two-row push-In connector with unlock button

**NOTE**

Externally turning off the I/O power supply (L+) can be used to trip all outputs. In that case, LED Power indicates that no voltage is being supplied. Mind, though, that not all modules have a voltage watchdog to indicate the state to the control unit. To have your control program check whether power is supplied to the IOs, connect L+ to a digital input and poll that input as an indirect indicator of the IO power supply.

Remember the following if you choose to do so:

**NOTE**

Avoid any reverse feeding of outputs while the power supply to the outputs is turned off.

This applies if the system is still supplied with power.

Outputs enabled by the user program may be supplied power via the protective diode of a reversely fed output, thus overriding the switch-off function of these outputs. Moreover, the protective diode of the feeding outputs may yield under high loads and be destroyed.

4.4 Status LEDs

LED "EtherCAT Run"

An LED labelled "EtherCAT Run" is located on both the bus coupler and the I/O modules. It indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "In L/A", LED "Out L/A"

The "In L/A" and "Out L/A" LEDs are located on the bus coupler. They indicate the physical state of the Ethernet.

| State | LED flash code | Explanation |
|---------------|-----------------|------------------------|
| Not connected | Off | No Ethernet connection |
| Connected | Green, on | Connected to Ethernet |
| Traffic | Green, flashing | Exchanging telegrams |

LED "IO"

Every I/O module has an LED labelled "IO". It indicates the state of the module's I/Os. Refer to the I/O module sections in this manual to know which states of a module are monitored and indicated.

LED "Power"

An LED labelled "Power" is located on every module that has a power supply connector (e.g. for digital outputs). It indicates the state of the I/O module's I/O power supply.

| State | LED flash code | Explanation |
|-------|----------------|----------------------|
| On | Green, on | 24 VDC supply ok |
| Off | Off | 24 VDC supply not ok |

5 Kuhnke FIO Modules

5.1 Controller

5.1.1 Controller 113

Separate instruction manuals describe the FIO-series mini-IPC control units. For further information, please click the link below.

Link to the documentation: <http://productfinder.kuhnke.kendrion.com>

Technical Data

| Type | Kuhnke FIO Controller 113 |
|-----------------------|---|
| Processor | 454 MHz i.MX28 Freescale |
| RAM / remanent memory | 128 MB / flash storage |
| Drives | On-board flash memory, SD(HC) card slot |
| Software | Operating system: Windows® Embedded CE 6.0 Application: CODESYS V3 Soft PLC plus WebVisu... |
| Ports | 1x RS232, 1x USB 2.0 |
| Networks | 1x Ethernet 10/100 Mbps – RJ45 |
| Fieldbus interfaces | 1x CAN, electrically isolated EtherCAT®, internal through the E-Bus interface, external through an extender module |
| Integral I/Os | 1x DI, interrupt-enabled |
| Housing (W x H x D) | Aluminium base, plastic, 25 x 120 x 90 [mm] |
| Installation | 35 mm DIN rail |
| Power supply | 24 VDC / (19.2 ... 28.8) |
| Output | Approx. 3 W (@ 24 VDC) |
| Operating temperature | 0 °C...+55 °C |

5.1.2 Controller 116

Separate instruction manuals describe the FIO-series mini-IPC control units. For further information, please click the link below.

Link to the documentation: <http://productfinder.kuhnke.kendrion.com>

Technical Data

| | |
|------------------------------|---|
| Type | Kuhnke FIO Controller 116 |
| Processor | i.MX6 SoloX Freescale 800 MHz |
| RAM / remanent memory | 256 MB / flash storage |
| Drives | On-board flash memory, SD(HC) card slot |
| Software | Operating system: Windows® Embedded Compact 2013 Application: CODESYS V3 Soft PLC plus optional WebVisu... |
| Ports | 1x RS232, 1x USB 2.0 |
| Networks | 1x Ethernet 10/100 Mbps – RJ45 |
| Fieldbus interfaces | 1x CAN, electrically isolated EtherCAT®, internal through the E-Bus interface, external through an extender module |
| Integral I/Os | 1x DI, interrupt-enabled |
| Housing (W x H x D) | Aluminium base, plastic, 25 x 120 x 90 [mm] |
| Installation | 35 mm DIN rail |
| Power supply | 24 VDC / (19.2 ... 28.8) |
| Output | Approx. 3.5 W (@ 24 VDC) |
| Operating temperature | 0 °C...+55 °C |

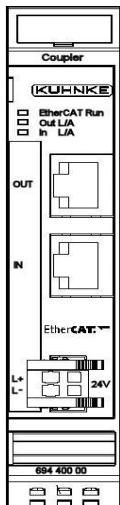

5.2 Bus Coupler and Extender

EtherCAT is an industrial real-time Ethernet and is suitable for hard and soft real-time requirements in automation technology. Please observe the following notes for the safe operation of an EtherCAT fieldbus system.

- Only use Ethernet cables that are at least Category 5 (CAt5) according to EN 50173 or ISO / IEC 11801 for connecting EtherCAT devices.
- Auto-crossing allows you to use both balanced (1: 1) and cross-over cables between EtherCAT devices.
- The permissible cable length between two EtherCAT devices may not exceed 100 meters.

|  | Information |
|---|--------------------|
| <p><i>Twist and permanent tensile load close to the connector of the Ethernet cable strain the connections. If the Ethernet plug is seated with a lot of play and not sufficiently guided in the socket, tilting effects occur at the plug connections. This often leads to contact interruptions and thus to field bus interruptions.</i></p> <p><i>Vibration test show, the deeper the plug sits in the socket, the more robust the connection. In the industrial sector, the mechanical requirements with regard to vibration and impact resistance are known to be higher than in the IT sector.</i></p> <p><i>Depending on the manufacturer and system, the plug-in depths available on the connectors available on the market vary from approximately 8 mm to almost 12 mm. Standard plugs are around 9 mm insertion depth. Connectors designed for the industrial sector reach according to the manufacturer up to 11.8 mm.</i></p> | |

5.2.1 Bus Coupler

The Kuhnke FIO bus coupler converts the physical transfer technology (twisted pair) to LVDS (E-bus) and generates the system voltages required by the LVDS modules. The standard 100 Base Tx lines used for office network communications connect to the one side, the Ventura FIO I/O modules for the process signals connect to the other. This is how the EtherCAT protocol is retained right through to the last single I/O module. At the end of the modular device, the connection between the forward and return lines is automatically closed, the effect being that another 100 Base Tx line can be plugged in to connect the next EtherCAT unit to the second bus coupler port.

Bus coupler front view

Information

Best noise emission results are obtained by connecting the shield of the EtherCAT cable to operative earth.

Use the

Shield Terminal, for example (see section **6.2**)

Connectors

Approval:.....

5.2.2 Bus Coupler DI16/DO16

The Kuhnke FIO bus coupler DI16/DO16 is an EtherCAT IO module providing the functions of the Kuhnke FIO bus coupler and Kuhnke FIO DI16/DO16 modules in a single unit. Its E-bus power has been reduced to 2 A to make it particularly fit for use in smaller blocks of modules. The module's bus coupler element converts the physical transfer technology (twisted pair) to LVDS (E-bus) and generates the voltages required by the LVDS modules. The module features 16 digital inputs and 16 digital outputs. The E-bus port on the side allows a flexible extension of the bus coupler DI16/DO16 by Kuhnke FIO-series EtherCAT I/O modules.

Front view of bus coupler DI16/DO16

Information

Best noise emission results are obtained by connecting the shield of the EtherCAT cable to operative earth.

5.2.4 Extender 2 Port

Kuhnke's FIO Extender lets you extend a Kuhnke FIO block or a Kuhnke FIO Control (Embedded PC) by EtherCAT slaves equipped with a standard 100 Base Tx connection. The extender converts the physical transfer technology from LVDS (E-bus) to twisted pair. The module is normally located at the end of the block. You may also place the extender at any point after the bus coupler or the FIO Control module, though, to design a star topology of EtherCAT slaves, for example.

The LED labelled "EtherCAT Run" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

5.2.4.1.1 LED "Out2", LED "Out1"

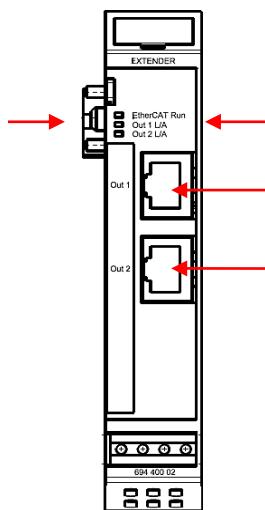

The "Out2" and "Out1" LEDs indicate the physical state of the Ethernet port they are allocated to.

| State | LED flash code | Explanation |
|---------------|-----------------|------------------------|
| Not connected | Off | No Ethernet connection |
| Connected | Green, on | Connected to Ethernet |
| Traffic | Green, flashing | Exchanging telegrams |

Function

The 2-port extender module actually has 4 ports. Calling it a 2-port module is due to its 2 standard RJ45 100 Base-Tx ports (OUT1, OUT2). The other 2 ports are used by the E-bus.

Your configuration should take account of the order in which the ports are addressed, i.e. of the transfer path of the EtherCAT frame.

| Port | Connector | Order |
|--------|-----------|-------|
| Port A | E-bus in | 1 |
| Port B | Out 2 | 3 |
| Port C | E-bus out | 4 |
| Port D | Out 1 | 2 |

LEDs "Channel"

| State | LED | Explanation |
|-------|-----------|-----------------|
| On | Green, on | Output enabled |
| Off | Off | Output disabled |

Function

The DO8 Relay NO 24 VDC module features 8 relay outputs.

Variable

| Variable | Data type | Explanation |
|----------------|-----------|--------------------------|
| DigitalOutputn | BOOL | Digital output (n=0...7) |
| Reserved | BOOL | Unused output addresses |

Module State

| Variable | Data type | Explanation |
|-----------|-----------|--------------------------------------|
| VoltageOK | BOOL | Low voltage (supplied power < 19.2V) |

NOTE

In case of undervoltage the switching of the relays is prevented and already energized relays fall off.

NOTE

Operation of the module in the limit range (temperature / total current) reduces the lifetime of the module. Pay attention to a good allocation of the switching currents to the individual outputs insert e.g. two outputs loaded with 5A if possible not directly next to each other.

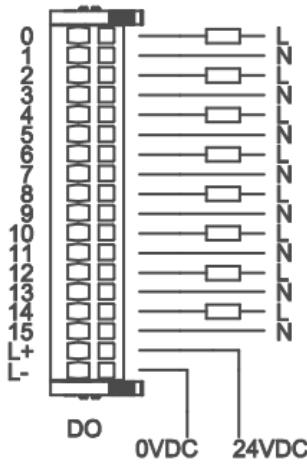

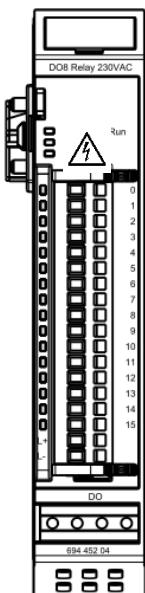

Technical Data

| | |
|--|----------------------------------|
| Digital outputs | 8 normally open relays |
| Max. switching current (resistive) | 5.0 A each |
| Max. switching current (inductive) | 2.0 A each |

Terminals

Power supply to module I/Os

L+ 24 VDC

L- 0 V

Status LEDs

LED "EtherCAT Run"

The LED labelled "EtherCAT Run" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "IO"

LED "IO" has no function.

LED "Power"

The LED labelled "Power" indicates the state of the I/O module's I/O power supply.

| State | LED flash code | Explanation |
|-------|----------------|----------------------|
| On | Green, on | 24 VDC supply ok |
| Off | Off | 24 VDC supply not ok |

LEDs "Channel"

| State | LED | Explanation |
|-------|-----------|-----------------|
| On | Green, on | Output enabled |
| Off | Off | Output disabled |

Function

The DO8 Relay NO 230 VDC module features 8 relay outputs.

Variable

| Variable | Data type | Explanation |
|----------------|-----------|--------------------------|
| DigitalOutputn | BOOL | Digital output (n=0...7) |
| Reserved | BOOL | Unused output addresses |

Module State

| Variable | Data type | Explanation |
|-----------|-----------|--------------------------------------|
| VoltageOK | BOOL | Low voltage (supplied power < 19.2V) |

NOTE

In case of undervoltage the switching of the relays is prevented and already energized relays fall off.

NOTE

Operation of the module in the limit range (temperature / total current) reduces the lifetime of the module. Pay attention to a good allocation of the switching currents to the individual outputs insert e.g. two outputs loaded with 5A if possible not directly next to each other.

Technical Data

| | |
|--|----------------------------------|
| Digital outputs | 8 normally open relays |
| Max. switching current (resistive) | 5.0 A each |
| Max. switching current (inductive) | 2.0 A each |
| Min. admissible load | 10 mA @ 5 VDC |
| Min. mech. switching cycles | 2×10^7 |
| Min. electr. switching cycles | 3×10^5 (2A/30 VDC) |
| Switching voltage..... | max. 24 VDC/230 VAC |
| IO/power connection..... | 18-pin plug |
| Controller | ASIC ET1200 |
| Baud rate | 100 Mbit/s |
| E-bus connector | 10-pole system plug in side wall |
| Terminating module | not required |
| Power supply | 24 VDC -20% +25% |
| E-bus load..... | 130 mA |

Status LEDs

LED "EtherCAT Run"

The LED labelled "EtherCAT Run" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|-----------|----------------|--|
| Ok | Green, on | No error |
| Error | Off | Malfunction of module if E-bus LED = On |
| | | Inoperative if E-bus LED = Off |
| | Red, 1x | Short circuit |
| | Red, 2x | Low voltage |
| | Red, 4x | EtherCAT watchdog control |
| | Red, 6x | Module-specific fault |
| | Red, 7x | Configuration error (E-bus pre-operational), no. of process data differs from that in the module |
| Defective | Red, on | Module defective |

LED "Power"

The LED labelled "Power" indicates the state of the I/O module's I/O power supply.

| State | LED flash code | Explanation |
|-------|----------------|----------------------|
| On | Green, on | 24 VDC supply ok |
| Off | Off | 24 VDC supply not ok |

LEDs "Channel"

The "Channel" LEDs indicate the state of every channel.

| State | LED flash code | Explanation |
|-------|----------------|-----------------------------------|
| On | Green, on | Channel enabled |
| Off | Off | Channel disabled |
| Error | Red, 1x | Short circuit |
| | Red, 3x | Wire failure |
| | Red, 5x | Excessive temp. of output drivers |

Functions

The module AI4 12Bit / AO4 16Bit has 4 analog inputs and 4 analog outputs. All channels can be parameterized almost independently of each other, giving the module a high degree of flexibility.

Input and output values can be easily scaled according to their use so that, for example, the measured value of a sensor can be read directly in the desired unit.

Configuration examples

Input mapping

Depending on the configuration of the analog inputs, various predefined mappings are available.

A basic distinction is made between the following display formats:

- Field Value Physical: Input value in [V] or [mA] as REAL
Mapping 1A01_h active
- Field Value Increments: Input value in digits as UINT
Mapping 1A02_h active
- Process Value: Scaled input value (Process value) as REAL
Mapping 1A03_h active

View of the mapped process data in CODESYS V3:

The screenshot shows the configuration interface for the AI4_12_Bit_AO4_16_Bit module. On the left, there's a navigation tree with nodes like 'Allgemein', 'Prozessdaten', 'Startparameter', 'EtherCAT E/A-Abbildung', 'Status', and 'Information'. The main area is divided into two tables: 'Ausgänge auswählen' (Outputs select) and 'Eingänge auswählen' (Inputs select). The 'Ausgänge auswählen' table lists four output channels (AO Output FV 1 to 4) with their types (REAL) and indices (16#6330:01 to 16#6330:04). The 'Eingänge auswählen' table lists four input channels (AI input FV 1 to 4) with their types (UINT) and indices (16#213F:00 to 16#213F:03). There are also sections for 'Device Control' and 'Process Value' which are currently inactive (indicated by a greyed-out checkbox).

Using the analog inputs

The analog inputs are parameterized as voltage input 0...10 V at delivery. Depending on the connected sensor, these can be parameterised via the following object:

| Object | Explanation |
|----------------------------------|---|
| AI Sensor Type 6110 _h | <p>42 = 0...10 V (Default)</p> <p>52 = 0...20 mA</p> <p>51 = 4...20 mA</p> |

Input scaling

Input values can be scaled channel by channel by specifying two set points or by specifying factor and offset. The scaled input values are output as process values (PV). These are output in a separately map able object.

| Objekt | Beschreibung |
|---|---|
| AI Input PV 6130 _h | Mapable object of the scaled analog input values The predefined mapping object 1A03h can be selected for this purpose. |
| AI Channel Control 2001 _h | Bit 1 = 0: Scaling by factor and offset Bit 1 = 1: Scaling by set points |
| AI Input Scaling 1 FV 6120 _h | Set point 1 Field value [V] or [mA] |
| AI Input Scaling 1 PV 6121 _h | Set point 1 Process value |
| AI Input Scaling 2 FV 6122 _h | Set point 2 Field value [V] or [mA] |
| AI Input Scaling 2 PV 6123 _h | Set point 2 Process value |
| AI Scaling Factor 6126 _h | Scaling factor [Process value / Field value] |
| AI Scaling Offset 6127 _h | Scaling offset [Process value] |
| | |

Ausgangsmapping

Depending on the configuration of the analog outputs, various predefined mappings are available.

A basic distinction is made between the following display formats:

- Field Value Physical: Output value in [V] or [mA] as REAL
Mapping 1601_h active
- Field Value Increments: Output value in digits as UINT
Mapping 1602_h active
- Process Value: Scaled output value (Process value) as REAL
Mapping 1603_h active

The above mappings are exclusive of each other, so only one of the 3 mappings can be activated.

Using the Analog Outputs

The analog outputs are not active on delivery. To use an analog output, it must be activated. The analog outputs are activated by configuring the output type of the respective output.

| Objekt | Beschreibung |
|----------------------------------|---|
| AO Output Type 6310 _h | 0 = Disabled (Default) 10 = 0...10 V 11 = +/- 10 V 20 = 0...20 mA 21 = 4...20 mA |

Output scaling

Output values can be scaled channel by channel by specifying two set points.

The scaled output values are output as a process value (PV).

These are output in a separately mapable object.

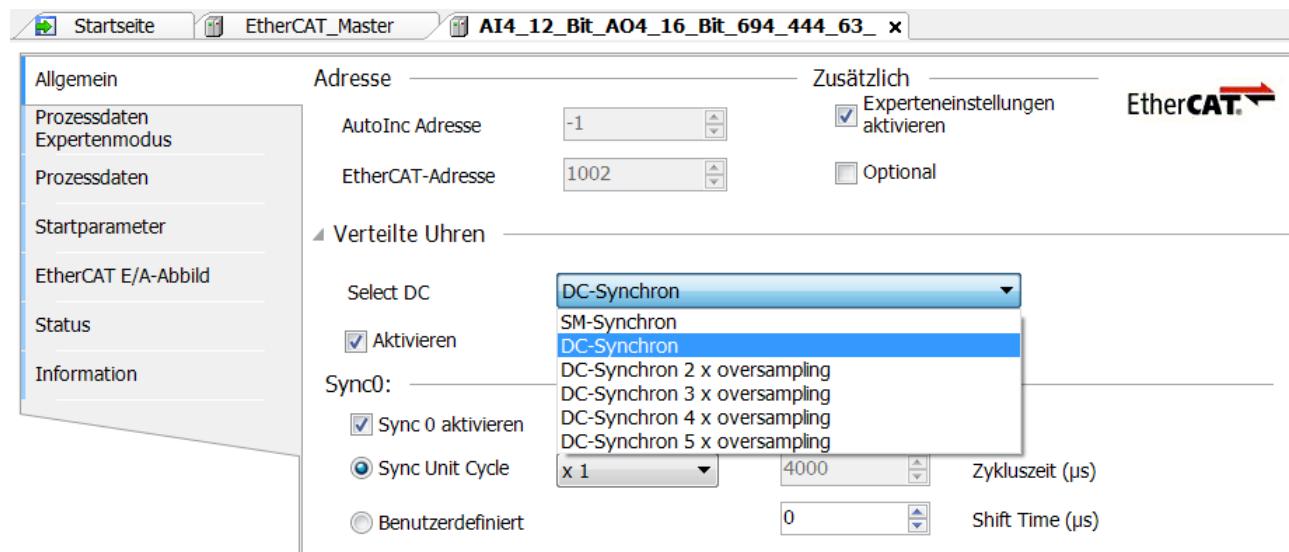

| Objekt | Beschreibung |
|--|--|
| AO Output PV 6300 _h | Mapable object contains the process value (PV) of the corresponding analog output. The predefined mapping object 1603 _h can be selected for this, other possibly selected mapping objects 1601 _h or 1602 _h must be deselected. |
| AO Output Scaling 1 FV 6320 _h | Set point 1 Field value [V] or [mA] |
| AO Output Scaling 1 PV 6321 _h | Set point 1 Process value |
| AO Output Scaling 2 FV 6322 _h | Set point 2 Field value [V] or [mA] |
| AO Output Scaling 2 PV 6323 _h | Set point 2 Process value |

Distributed Clocks Operation

In order to acquire or output data in an EtherCAT network at a certain time on all participants simultaneously, all participants must work synchronously. For this purpose there is a local clock in the EtherCAT slave controllers, which is automatically synchronised by the EtherCAT master with the master clock in the EtherCAT network with an accuracy of less than 100ns.

The EtherCAT slave controllers in the EtherCAT network generate interrupts synchronously. This interrupt collects input data or processes output data simultaneously.

Several DC modes are available on the AI4 / AO4:

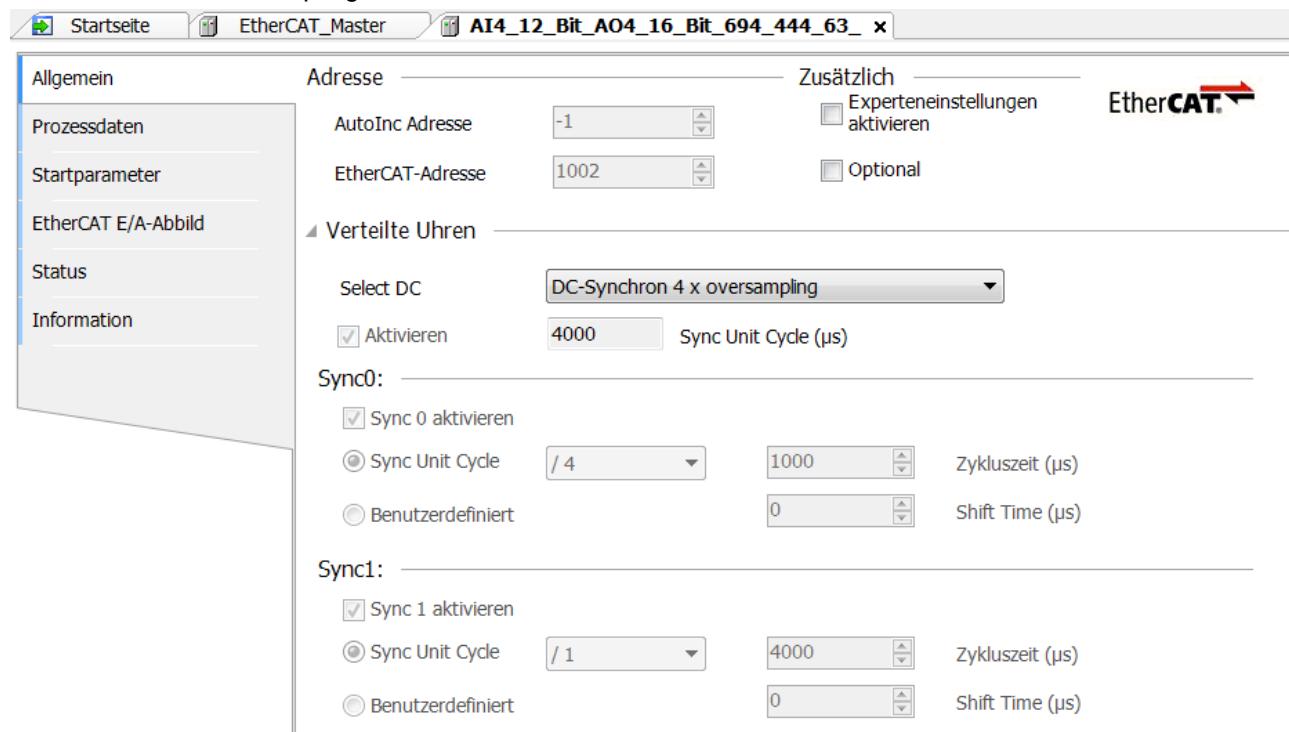

DC synchronous oversampling operation

In oversampling mode, it is possible to acquire up to 5 measured values in one bus cycle, enabling the acquisition of rapidly changing measured values.

For n-times oversampling, one of the DC synchronous operating modes with the desired factor n is selected in the EtherCAT slave setting.

Example:

- DC- Cycle time 4000µs
- 4-times oversampling

Every 1000µs the Sync 0 interrupt is triggered on the module, in which the input values are read.

These are available in the following objects:

| Field Value (Real) | Process Value (Real) |
|--|--|
| AI1 Oversample Data FV 2101 _h | AI1 Oversample Data PV 2131 _h |
| AI2 Oversample Data FV 2102 _h | AI2 Oversample Data PV 2132 _h |
| AI3 Oversample Data FV 2103 _h | AI3 Oversample Data PV 2133 _h |
| AI4 Oversample Data FV 2104 _h | AI4 Oversample Data PV 2134 _h |

Furthermore, every 4000µs the Sync 1 interrupt is triggered, with which the output values are written and the average value of the sampled input values is calculated.

Object dictionary

Device Type 1000h

| Access | read only |
| PDO Mapping | No |
| Default Value | 04 |

| | |
|----------------------|-------------------------|
| Name | 1st Object to be mapped |
| Subindex | 01 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 6300 01 20 _h |

| | |
|----------------------|-------------------------|
| Name | 2nd Object to be mapped |
| Subindex | 02 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 6300 02 20 _h |

| | |
|----------------------|-------------------------|
| Name | 3rd Object to be mapped |
| Subindex | 03 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 6300 03 20 _h |

| | |
|----------------------|-------------------------|
| Name | 4th Object to be mapped |
| Subindex | 04h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 6300 04 20h |

| | |
|----------------------|-------------------------|
| Name | 5th Object to be mapped |
| Subindex | 05h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000h |

| | |
|----------------------|-------------------------|
| Name | 6th Object to be mapped |
| Subindex | 06h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000h |

| | |
|----------------------|-------------------------|
| Name | 7th Object to be mapped |
| Subindex | 07h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000h |

| | |
|----------------------|-------------------------|
| Name | 8th Object to be mapped |
| Subindex | 08h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000h |

Each subindex (1-8) describes one mapped object. A mapping entry consists of four bytes which are composed as follows:

| | | |
|-------------|------------|-------------------------------------|
| Index[16] | Bit 31..16 | Index of the object to be mapped |
| SubIndex[8] | Bit 15..8 | Subindex of the object to be mapped |
| Length[8] | Bit 7..0 | Length of the object to be mapped |

Mapping 1A00h (Error Field)

| | |
|------------------------|-------------|
| Name | Error Field |
| Index | 1A00h |
| Object Code | RECORD |
| No. of Elements | 9 |
| Data Type | PDO_MAPPING |

| | |
|----------------------|-----------------------------|
| Name | Highest sub index supported |
| Subindex | 00h |
| Data type | UNSIGNED8 |
| Access | read only |
| PDO Mapping | No |
| Default Value | 01h |

| | |
|----------------------|-------------------------|
| Name | 1st Object to be mapped |
| Subindex | 01h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 213F 00 10h |

| | |
|----------------------|-------------------------|
| Name | 2nd Object to be mapped |
| Subindex | 02h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000h |

| | |
|----------------------|-------------------------|
| Name | 3rd Object to be mapped |
| Subindex | 03h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000h |

| | |
|----------------------|-------------------------|
| Name | 4th Object to be mapped |
| Subindex | 04h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000h |

| | |
|----------------------|-------------------------|
| Name | 5th Object to be mapped |
| Subindex | 05 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 6th Object to be mapped |
| Subindex | 06 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 7th Object to be mapped |
| Subindex | 07 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 8th Object to be mapped |
| Subindex | 08 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

Each subindex (1-8) describes one mapped object. A mapping entry consists of four bytes which are composed as follows:

| | | |
|-------------|------------|-------------------------------------|
| Index[16] | Bit 31..16 | Index of the object to be mapped |
| SubIndex[8] | Bit 15..8 | Subindex of the object to be mapped |
| Length[8] | Bit 7..0 | Length of the object to be mapped |

Mapping 1A01_h (AI Field Value Pysical)

| | |
|------------------------|------------------------|
| Name | AI Field Value Pysical |
| Index | 1A01 _h |
| Object Code | RECORD |
| No. of Elements | 9 |
| Data Type | PDO_MAPPING |

| | |
|----------------------|-----------------------------|
| Name | Highest sub index supported |
| Subindex | 00 _h |
| Data type | UNSIGNED8 |
| Access | read only |
| PDO Mapping | No |
| Default Value | 04 _h |

| | |
|----------------------|-------------------------|
| Name | 1st Object to be mapped |
| Subindex | 01 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 6100 01 20 _h |

| | |
|----------------------|-------------------------|
| Name | 2nd Object to be mapped |
| Subindex | 02 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 6100 02 20 _h |

| | |
|----------------------|-------------------------|
| Name | 3rd Object to be mapped |
| Subindex | 03 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 6100 03 20 _h |

| | |
|----------------------|-------------------------|
| Name | 4th Object to be mapped |
| Subindex | 04 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 6100 04 20 _h |

| | |
|----------------------|-------------------------|
| Name | 5th Object to be mapped |
| Subindex | 05 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 6th Object to be mapped |
| Subindex | 06 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 7th Object to be mapped |
| Subindex | 07 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 8th Object to be mapped |
| Subindex | 08 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

Each subindex (1-8) describes one mapped object. A mapping entry consists of four bytes which are composed as follows:

| | | |
|-------------|------------|-------------------------------------|
| Index[16] | Bit 31..16 | Index of the object to be mapped |
| SubIndex[8] | Bit 15..8 | Subindex of the object to be mapped |
| Length[8] | Bit 7..0 | Length of the object to be mapped |

Mapping 1A02_h (AI Field Value Increments)

| | |
|------------------------|---------------------------|
| Name | AI Field Value Increments |
| Index | 1A02 _h |
| Object Code | RECORD |
| No. of Elements | 9 |
| Data Type | PDO_MAPPING |

| | |
|----------------------|-----------------------------|
| Name | Highest sub index supported |
| Subindex | 00 _h |
| Data type | UNSIGNED8 |
| Access | read only |
| PDO Mapping | No |
| Default Value | 04 _h |

| | |
|----------------------|-------------------------|
| Name | 1st Object to be mapped |
| Subindex | 01 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 7100 01 20 _h |

| | |
|----------------------|-------------------------|
| Name | 2nd Object to be mapped |
| Subindex | 02 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 7100 02 20 _h |

| | |
|----------------------|-------------------------|
| Name | 3rd Object to be mapped |
| Subindex | 03 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 7100 03 20 _h |

| | |
|----------------------|-------------------------|
| Name | 4th Object to be mapped |
| Subindex | 04 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 7100 04 20 _h |

| | |
|----------------------|-------------------------|
| Name | 5th Object to be mapped |
| Subindex | 05 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 6th Object to be mapped |
| Subindex | 06 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 7th Object to be mapped |
| Subindex | 07 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 8th Object to be mapped |
| Subindex | 08 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

Each subindex (1-8) describes one mapped object. A mapping entry consists of four bytes which are composed as follows:

| | | |
|-------------|------------|-------------------------------------|
| Index[16] | Bit 31..16 | Index of the object to be mapped |
| SubIndex[8] | Bit 15..8 | Subindex of the object to be mapped |
| Length[8] | Bit 7..0 | Length of the object to be mapped |

Mapping 1A03h (AI Process Value)

| | |
|------------------------|------------------|
| Name | AI Process Value |
| Index | 1A03h |
| Object Code | RECORD |
| No. of Elements | 9 |
| Data Type | PDO_MAPPING |

| | |
|----------------------|-----------------------------|
| Name | Highest sub index supported |
| Subindex | 00h |
| Data type | UNSIGNED8 |
| Access | read only |
| PDO Mapping | No |
| Default Value | 04h |

| | |
|----------------------|-------------------------|
| Name | 1st Object to be mapped |
| Subindex | 01h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 6130 01 20h |

| | |
|----------------------|-------------------------|
| Name | 2nd Object to be mapped |
| Subindex | 02h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 6130 02 20 |

| | |
|----------------------|-------------------------|
| Name | 3rd Object to be mapped |
| Subindex | 03h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 6130 03 20h |

| | |
|----------------------|-------------------------|
| Name | 4th Object to be mapped |
| Subindex | 04h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 6130 04 20h |

| | |
|----------------------|-------------------------|
| Name | 5th Object to be mapped |
| Subindex | 05 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 6th Object to be mapped |
| Subindex | 06 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 7th Object to be mapped |
| Subindex | 07 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 8th Object to be mapped |
| Subindex | 08 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

Each subindex (1-8) describes one mapped object. A mapping entry consists of four bytes which are composed as follows:

| | | |
|-------------|------------|-------------------------------------|
| Index[16] | Bit 31..16 | Index of the object to be mapped |
| SubIndex[8] | Bit 15..8 | Subindex of the object to be mapped |
| Length[8] | Bit 7..0 | Length of the object to be mapped |

Mapping 1A04_h (Oversample FV AI1)

| | |
|------------------------|-------------------|
| Name | Oversample FV AI1 |
| Index | 1A04 _h |
| Object Code | RECORD |
| No. of Elements | 9 |
| Data Type | PDO_MAPPING |

| | |
|----------------------|-----------------------------|
| Name | Highest sub index supported |
| Subindex | 00 _h |
| Data type | UNSIGNED8 |
| Access | read only |

| Default Value | 05 _h |

| | |
|----------------------|-------------------------|
| Name | 1st Object to be mapped |
| Subindex | 01 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2101 01 10 _h |

| | |
|----------------------|-------------------------|
| Name | 2nd Object to be mapped |
| Subindex | 02 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2101 02 10 |

| | |
|----------------------|-------------------------|
| Name | 3rd Object to be mapped |
| Subindex | 03 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2101 03 10 _h |

| | |
|----------------------|-------------------------|
| Name | 4th Object to be mapped |
| Subindex | 04 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2101 04 10 _h |

| | |
|----------------------|-------------------------|
| Name | 5th Object to be mapped |
| Subindex | 05 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2101 05 10 _h |

| | |
|----------------------|-------------------------|
| Name | 6th Object to be mapped |
| Subindex | 06 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 7th Object to be mapped |
| Subindex | 07 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 8th Object to be mapped |
| Subindex | 08 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

Each subindex (1-8) describes one mapped object. A mapping entry consists of four bytes which are composed as follows:

| | | |
|-------------|------------|-------------------------------------|
| Index[16] | Bit 31..16 | Index of the object to be mapped |
| SubIndex[8] | Bit 15..8 | Subindex of the object to be mapped |
| Length[8] | Bit 7..0 | Length of the object to be mapped |

Mapping 1A05_h (Oversample FV AI2)

| | |
|------------------------|-------------------|
| Name | Oversample FV AI2 |
| Index | 1A05 _h |
| Object Code | RECORD |
| No. of Elements | 9 |
| Data Type | PDO_MAPPING |

| | |
|----------------------|-----------------------------|

| | |
|----------------------|-------------------------|
| Name | 1st Object to be mapped |
| Subindex | 01 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2102 01 10 _h |

| | |
|----------------------|-------------------------|
| Name | 2nd Object to be mapped |
| Subindex | 02 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2102 02 10 |

| | |
|----------------------|-------------------------|
| Name | 3rd Object to be mapped |
| Subindex | 03 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2102 03 10 _h |

| | |
|----------------------|-------------------------|
| Name | 4th Object to be mapped |
| Subindex | 04 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2102 04 10 _h |

| | |
|----------------------|-------------------------|
| Name | 5th Object to be mapped |
| Subindex | 05 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2102 05 10 _h |

| | |
|----------------------|-------------------------|
| Name | 6th Object to be mapped |
| Subindex | 06 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 7th Object to be mapped |
| Subindex | 07 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 8th Object to be mapped |
| Subindex | 08 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

Each subindex (1-8) describes one mapped object. A mapping entry consists of four bytes which are composed as follows:

| | | |
|-------------|------------|-------------------------------------|
| Index[16] | Bit 31..16 | Index of the object to be mapped |
| SubIndex[8] | Bit 15..8 | Subindex of the object to be mapped |
| Length[8] | Bit 7..0 | Length of the object to be mapped |

Mapping 1A06_h (Oversample FV AI3)

| | |
|------------------------|-------------------|
| Name | Oversample FV AI3 |
| Index | 1A06 _h |
| Object Code | RECORD |
| No. of Elements | 9 |
| Data Type | PDO_MAPPING |

| | |
|----------------------|-----------------------------|
| Name | Highest sub index supported |
| Subindex | 00 _h |
| Data type | UNSIGNED8 |
| Access | read only |
| PDO Mapping | No |
| Default Value | 05 _h |

| | |
|----------------------|-------------------------|
| Name | 1st Object to be mapped |
| Subindex | 01 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2103 01 10 _h |

| | |
|----------------------|-------------------------|
| Name | 2nd Object to be mapped |
| Subindex | 02 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2103 02 10 |

| | |
|----------------------|-------------------------|
| Name | 3rd Object to be mapped |
| Subindex | 03 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2103 03 10 _h |

| | |
|----------------------|-------------------------|
| Name | 4th Object to be mapped |
| Subindex | 04 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2103 04 10 _h |

| | |
|----------------------|-------------------------|
| Name | 5th Object to be mapped |
| Subindex | 05 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2103 05 10 _h |

| | |
|----------------------|-------------------------|
| Name | 6th Object to be mapped |
| Subindex | 06 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 7th Object to be mapped |
| Subindex | 07 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 8th Object to be mapped |
| Subindex | 08 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

Each subindex (1-8) describes one mapped object. A mapping entry consists of four bytes which are composed as follows:

| | | |
|-------------|------------|-------------------------------------|
| Index[16] | Bit 31..16 | Index of the object to be mapped |
| SubIndex[8] | Bit 15..8 | Subindex of the object to be mapped |
| Length[8] | Bit 7..0 | Length of the object to be mapped |

Mapping 1A07_h (Oversample FV AI4)

| | |
|------------------------|-------------------|
| Name | Oversample FV AI4 |
| Index | 1A07 _h |
| Object Code | RECORD |
| No. of Elements | 9 |
| Data Type | PDO_MAPPING |

| | |
|----------------------|-----------------------------|
| Name | Highest sub index supported |
| Subindex | 00 _h |

| Access | read only |
| PDO Mapping | No |
| Default Value | 05 _h |

| | |
|----------------------|-------------------------|
| Name | 1st Object to be mapped |
| Subindex | 01 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2104 01 10 _h |

| | |
|----------------------|-------------------------|
| Name | 2nd Object to be mapped |
| Subindex | 02 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2104 02 10 |

| | |
|----------------------|-------------------------|
| Name | 3rd Object to be mapped |
| Subindex | 03 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2104 03 10 _h |

| | |
|----------------------|-------------------------|
| Name | 4th Object to be mapped |
| Subindex | 04 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2104 04 10 _h |

| | |
|----------------------|-------------------------|
| Name | 5th Object to be mapped |
| Subindex | 05 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2104 05 10 _h |

| | |
|----------------------|-------------------------|
| Name | 6th Object to be mapped |
| Subindex | 06 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 7th Object to be mapped |
| Subindex | 07 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 8th Object to be mapped |
| Subindex | 08 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

Each subindex (1-8) describes one mapped object. A mapping entry consists of four bytes which are composed as follows:

| | | |
|-------------|------------|-------------------------------------|
| Index[16] | Bit 31..16 | Index of the object to be mapped |
| SubIndex[8] | Bit 15..8 | Subindex of the object to be mapped |
| Length[8] | Bit 7..0 | Length of the object to be mapped |

Mapping 1A08_h (Oversample PV AI1)

| | |
|------------------------|-------------------|
| Name | Oversample PV AI1 |
| Index | 1A08 _h |
| Object Code | RECORD |
| No. of Elements | 9 |
| Data Type | PDO_MAPPING |

| | |
|----------------------|-----------------------------|
| Name | Highest sub index supported |
| Subindex | 00 _h |
| Data type | UNSIGNED8 |
| Access | read only |
| PDO Mapping | No |
| Default Value | 05 _h |

| | |
|----------------------|-------------------------|
| Name | 1st Object to be mapped |
| Subindex | 01 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2131 01 20 _h |

| | |
|----------------------|-------------------------|
| Name | 2nd Object to be mapped |
| Subindex | 02 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2131 02 20 |

| | |
|----------------------|-------------------------|
| Name | 3rd Object to be mapped |
| Subindex | 03 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2101 03 10 _h |

| | |
|----------------------|-------------------------|
| Name | 4th Object to be mapped |
| Subindex | 04 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2131 04 20 _h |

| | |
|----------------------|-------------------------|
| Name | 5th Object to be mapped |
| Subindex | 05 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2131 05 20 _h |

| | |
|----------------------|-------------------------|
| Name | 6th Object to be mapped |
| Subindex | 06 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 7th Object to be mapped |
| Subindex | 07 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 8th Object to be mapped |
| Subindex | 08 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

Each subindex (1-8) describes one mapped object. A mapping entry consists of four bytes which are composed as follows:

| | | |
|-------------|------------|-------------------------------------|
| Index[16] | Bit 31..16 | Index of the object to be mapped |
| SubIndex[8] | Bit 15..8 | Subindex of the object to be mapped |
| Length[8] | Bit 7..0 | Length of the object to be mapped |

Mapping 1A09_h (Oversample PV AI2)

| | |
|------------------------|-------------------|
| Name | Oversample PV AI2 |
| Index | 1A09 _h |
| Object Code | RECORD |
| No. of Elements | 9 |
| Data Type | PDO_MAPPING |

| | |
|----------------------|-----------------------------|
| Name | Highest sub index supported |
| Subindex | 00 _h |
| Data type | UNSIGNED8 |
| Access | read only |
| PDO Mapping | No |
| Default Value | 05 _h |

| | |
|----------------------|-------------------------|
| Name | 1st Object to be mapped |
| Subindex | 01 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2132 01 20 _h |

| | |
|----------------------|-------------------------|
| Name | 2nd Object to be mapped |
| Subindex | 02 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2132 02 20 _h |

| | |
|----------------------|-------------------------|
| Name | 3rd Object to be mapped |
| Subindex | 03 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2132 03 20 _h |

| | |
|----------------------|-------------------------|
| Name | 4th Object to be mapped |
| Subindex | 04 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2132 04 20 _h |

| | |
|----------------------|-------------------------|
| Name | 5th Object to be mapped |
| Subindex | 05 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2132 05 20 _h |

| | |
|----------------------|-------------------------|
| Name | 6th Object to be mapped |
| Subindex | 06 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 7th Object to be mapped |
| Subindex | 07 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 8th Object to be mapped |
| Subindex | 08 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

Each subindex (1-8) describes one mapped object. A mapping entry consists of four bytes which are composed as follows:

| | | |
|-------------|------------|-------------------------------------|
| Index[16] | Bit 31..16 | Index of the object to be mapped |
| SubIndex[8] | Bit 15..8 | Subindex of the object to be mapped |
| Length[8] | Bit 7..0 | Length of the object to be mapped |

Mapping 1A0Ah (Oversample PV AI3)

| | |
|------------------------|-------------------|
| Name | Oversample PV AI3 |
| Index | 1A0Ah |
| Object Code | RECORD |
| No. of Elements | 9 |
| Data Type | PDO_MAPPING |

| | |
|----------------------|-----------------------------|
| Name | Highest sub index supported |
| Subindex | 00h |
| Data type | UNSIGNED8 |
| Access | read only |
| PDO Mapping | No |
| Default Value | 05h |

| | |
|----------------------|-------------------------|
| Name | 1st Object to be mapped |
| Subindex | 01h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2133 01 20h |

| | |
|----------------------|-------------------------|
| Name | 2nd Object to be mapped |
| Subindex | 02h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2133 02 20 |

| | |
|----------------------|-------------------------|
| Name | 3rd Object to be mapped |
| Subindex | 03h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2133 03 20h |

| | |
|----------------------|-------------------------|
| Name | 4th Object to be mapped |
| Subindex | 04h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2133 04 20h |

| | |
|----------------------|-------------------------|
| Name | 5th Object to be mapped |
| Subindex | 05 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2133 05 20 _h |

| | |
|----------------------|-------------------------|
| Name | 6th Object to be mapped |
| Subindex | 06 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 7th Object to be mapped |
| Subindex | 07 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 8th Object to be mapped |
| Subindex | 08 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

Each subindex (1-8) describes one mapped object. A mapping entry consists of four bytes which are composed as follows:

| | | |
|-------------|------------|-------------------------------------|
| Index[16] | Bit 31..16 | Index of the object to be mapped |
| SubIndex[8] | Bit 15..8 | Subindex of the object to be mapped |
| Length[8] | Bit 7..0 | Length of the object to be mapped |

Mapping 1A0B_h (Oversample PV AI4)

| | |
|------------------------|-------------------|
| Name | Oversample PV AI4 |
| Index | 1A0B _h |
| Object Code | RECORD |
| No. of Elements | 9 |
| Data Type | PDO_MAPPING |

| | |
|----------------------|-----------------------------|
| Name | Highest sub index supported |
| Subindex | 00 _h |
| Data type | UNSIGNED8 |
| Access | read only |
| PDO Mapping | No |
| Default Value | 05 _h |

| | |
|----------------------|-------------------------|
| Name | 1st Object to be mapped |
| Subindex | 01 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2134 01 20 _h |

| | |
|----------------------|-------------------------|
| Name | 2nd Object to be mapped |
| Subindex | 02 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2134 02 20 |

| | |
|----------------------|-------------------------|
| Name | 3rd Object to be mapped |
| Subindex | 03 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2134 03 20 _h |

| | |
|----------------------|-------------------------|
| Name | 4th Object to be mapped |
| Subindex | 04 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2134 04 20 _h |

| | |
|----------------------|-------------------------|
| Name | 5th Object to be mapped |
| Subindex | 05 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 2134 05 20 _h |

| | |
|----------------------|-------------------------|
| Name | 6th Object to be mapped |
| Subindex | 06 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 7th Object to be mapped |
| Subindex | 07 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

| | |
|----------------------|-------------------------|
| Name | 8th Object to be mapped |
| Subindex | 08 _h |
| Data type | UNSIGNED32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

Each subindex (1-8) describes one mapped object. A mapping entry consists of four bytes which are composed as follows:

| | | |
|-------------|------------|-------------------------------------|
| Index[16] | Bit 31..16 | Index of the object to be mapped |
| SubIndex[8] | Bit 15..8 | Subindex of the object to be mapped |
| Length[8] | Bit 7..0 | Length of the object to be mapped |

AI Channel Control 2001h

| | |
|------------------------|--------------------|
| Name | AI Channel Control |
| Index | 2001h |
| Object Code | ARRAY |
| No. of Elements | 5 |
| Data Type | UINT8 |

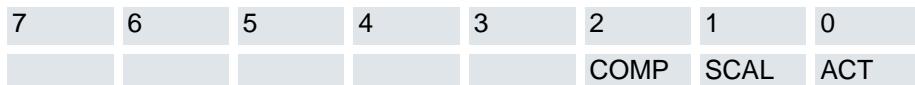

| | |
|----------------------|-----------------------------|
| Name | Highest sub index supported |
| Subindex | 00h |
| Data type | UINT8 |
| Access | read only |
| PDO Mapping | No |
| Default Value | 04h |

| | |
|----------------------|----------------------|
| Name | AI Channel Control 1 |
| Subindex | 01h |
| Data type | UINT8 |
| Access | read write |
| PDO Mapping | Yes, RX-PDO |
| Default Value | 00000000h |

| | |
|----------------------|----------------------|
| Name | AI Channel Control 2 |
| Subindex | 02h |
| Data type | UINT8 |
| Access | read write |
| PDO Mapping | Yes, RX-PDO |
| Default Value | 00000000h |

| | |
|----------------------|----------------------|
| Name | AI Channel Control 3 |
| Subindex | 03h |
| Data type | UINT8 |
| Access | read write |
| PDO Mapping | Yes, RX-PDO |
| Default Value | 00000000h |

| | |
|----------------------|----------------------|
| Name | AI Channel Control 4 |
| Subindex | 04h |
| Data type | UINT8 |
| Access | read write |
| PDO Mapping | Yes, RX-PDO |
| Default Value | 00000000h |

ACT:

- 0 = Input inactive
- 1 = Input active (Default)

SCAL:

- 0 = Input values scaled by factor and offset (Default)
- 1 = Input values scaled by set points

COMP:

- 0 = Comparator inactive (Default)
- 1 = Comparator active

AI Channel Status 2002_h

| | |
|-----------------|-------------------|
| Name | AI Channel State |
| Index | 2002 _h |
| Object Code | ARRAY |
| No. of Elements | 5 |
| Data Type | UINT8 |

| | |
|---------------|-----------------------------|
| Name | Highest sub index supported |
| Subindex | 00 _h |
| Data type | UINT8 |
| Access | read only |
| PDO Mapping | No |
| Default Value | 04 _h |

| | |
|---------------|-----------------------|
| Name | AI Channel Status 1 |
| Subindex | 01 _h |
| Data type | UINT8 |
| Access | read only |
| PDO Mapping | Yes, TX-PDO |
| Default Value | 00000000 _h |

| | |
|---------------|-----------------------|
| Name | AI Channel Status 2 |
| Subindex | 02 _h |
| Data type | UINT8 |
| Access | read only |
| PDO Mapping | Yes, TX-PDO |
| Default Value | 00000000 _h |

| | |
|---------------|---------------------|
| Name | AI Channel Status 3 |
| Subindex | 03h |
| Data type | UINT8 |
| Access | read only |
| PDO Mapping | Yes, TX-PDO |
| Default Value | 00000000h |

| | |
|---------------|---------------------|
| Name | AI Channel Status 4 |
| Subindex | 04h |
| Data type | UINT8 |
| Access | read only |
| PDO Mapping | Yes, TX-PDO |
| Default Value | 00000000h |

Kanalzustand:

| | | | | | | | |
|---|---|---|---|---|---|-------|-------|
| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| | | | | | | UpLim | LoLim |

LoLim (Lower Limit) / UpLim (Upper Limit)

0 = Limit not exceeded

1 = Limit exceeded

Error Log 2003_h

| | |
|------------------------|-------------------|
| Name | Error Log |
| Index | 2003 _h |
| Object Code | RECORD |
| No. of Elements | 9 |
| Data Type | UNSIGNED32 |

| | |
|----------------------|------------------|
| Name | Number of errors |
| Subindex | 00 _h |
| Data type | UNSIGNED8 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00h |

| | |
|----------------------|------------------------------------|
| Name | Standard error field |
| Subindex | 01 _h .. 08 _h |
| Data type | UNSIGNED32 |
| Access | read only |
| PDO Mapping | No |
| Default Value | 00000000h |

If a new error occurs, it is written to subindex 1. The existing entries in subindexes 1 to 7 are moved one position backwards. The error on subindex 7 is removed.

The number of errors that have already occurred can be read from the object with the subindex 0. If a "0" is written in this object, the counting starts again.

The object contains the error numbers from the object Error Code 213F_h

Sample Count 2100_h

| | |
|------------------------|-------------------|
| Name | Sample Count |
| Index | 2100 _h |
| Object Code | VARIABLE |
| No. of Elements | 0 |
| Data Type | UNSIGNED32 |
| Access | read only |
| PDO Mapping | Yes, TX-PDO |
| Value Range | |
| Default Value | 00h |

Number of samples since reset / restart

AI1 Oversample Data FV 2101_h

| Subindex | 04 _h |
| Data type | REAL32 |
| Access | read write |
| PDO Mapping | No |
| Default Value | 00000000 _h |

Scaling offset [Process value]

AI Input PV 6130_h

| | |
|------------------------|-------------------|
| Name | AI Input PV |
| Index | 6130 _h |
| Object Code | ARRAY |
| No. of Elements | 5 |
| Data Type | REAL32 |

| | |
|----------------------|-----------------------------|
| Name | Highest sub index supported |
| Subindex | 00 _h |
| Data type | REAL32 |
| Access | read only |
| PDO Mapping | No |
| Default Value | 04 _h |

| | |
|----------------------|-----------------------|
| Name | AI Input PV 1 |
| Subindex | 01 _h |
| Data type | REAL32 |
| Access | read only |
| PDO Mapping | Yes, TX-PDO |
| Default Value | 00000000 _h |

| | |
|----------------------|-----------------------|
| Name | AI Input PV 2 |
| Subindex | 02 _h |
| Data type | REAL32 |
| Access | read only |
| PDO Mapping | Yes, TX-PDO |
| Default Value | 00000000 _h |

| | |
|----------------------|-----------------------|
| Name | AI Input PV 3 |
| Subindex | 03 _h |
| Data type | REAL32 |
| Access | read only |
| PDO Mapping | Yes, TX-PDO |
| Default Value | 00000000 _h |

| | |
|----------------------|-----------------------|
| Name | AI Input PV 4 |
| Subindex | 04 _h |
| Data type | REAL32 |
| Access | read only |
| PDO Mapping | Yes, TX-PDO |
| Default Value | 00000000 _h |

Analog process input values as real measured variables, determined by the scaling values.

When oversampling is active, the average value of the sampled process input values is displayed.

AI Filter Type 61A0_h

| | |
|-----------------|-------------------|
| Name | AI Filter Type |

| Analog Outputs | 4 |
| Resolution..... | 16 Bit |
| Output rate..... | SM-/DC-synchronous, |
| Intrinsic error..... | ±0,2% |
| Temperature error | ±0,005%/K |
| Destruction limit against external stresses..... | 15V |

Voltage:

| | |
|-------------------------------|-----------------------------|
| Output range..... | 0 ... 10V, ± 10V |
| Short circuit protection..... | Ja |
| Short circuit current | max. 30mA |
| Load resistance | min. 1kΩ |
| Settling time..... | 0→10V: ≤22µs bei 2kΩ/<200pF |

Current:

| | |
|-----------------------|---------------------------------|
| Output range | 0...20mA, 4...20mA, 0...24mA |
| Load resistance | max. 500Ω, max. 1mH (induktive) |
| Settling time..... | 0→16V: ≤25µs at 300Ω/<1mH |

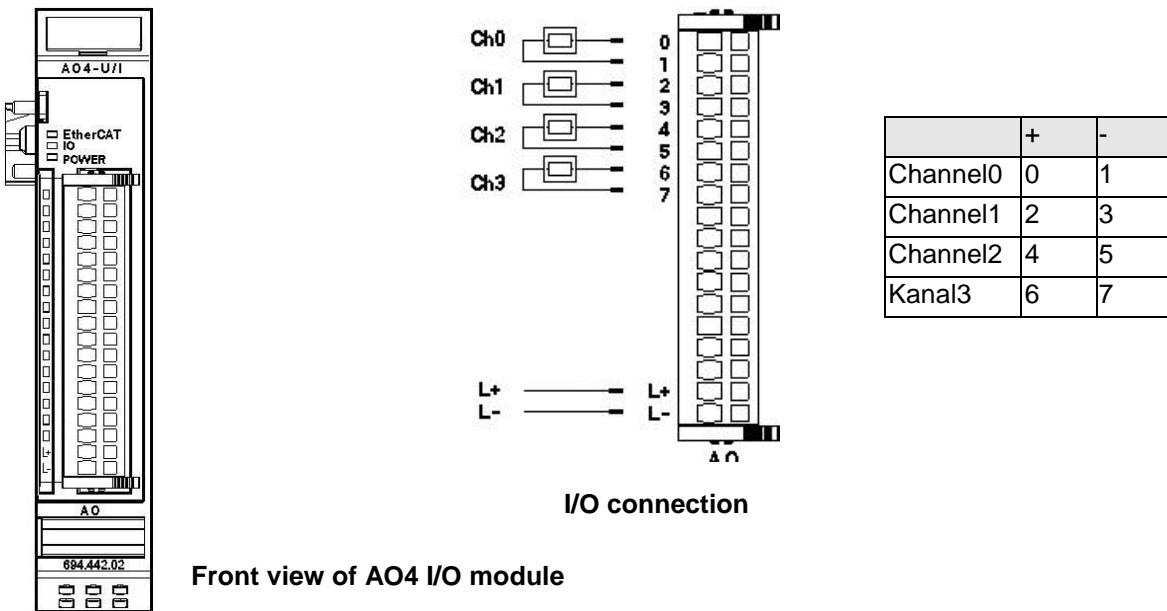

General information

Baud rate 100 Mbit/s
Controller ASIC ET1200
E-bus connector 10-pole system plug in side wall
Terminating module not required
IO/power connection 36-pin plug
Power supply 24 VDC -20% +25%
E-bus load 150 mA
Order-No. 694.444.65

Approvals:.....

5.4.2 AO4-U/I - 12-Bit

Terminals

Power supply to module I/Os

L+ 24 VDC

L- 0 V

Information

Module 694 442 02 Kuhnke FIO AO4 12-Bit is the successor module (see below for exception) compatible with module 694 442 02 Ventura FIO AO4 12-Bit. That is to say, the modules are interchangeable within the same FIO block without having to modify the device description in the EtherCAT master's control program.

Please note the following differences if you have a program including the old variant:

| Ventura FIO AO4 12-Bit (old) | Kuhnke FIO AO4 12-Bit (new) |
|------------------------------|--|
| Current: 0...±20mA | Current: 0...+20mA To be able to use the current outputs, verify that variable "Channel_n_n+1_Unipolar" of these outputs is set to True. Refer to section Module Options |
| Short-circuit detectable | Short-circuit not detectable but outputs are short circuit-protected |
| Data type of output: UINT | Data type of output: INT Run the development environment and convert the data type from UINT to INT. |

Status LEDs

LED "EtherCAT Run"

The LED labelled "EtherCAT Run" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|-----------|----------------|--|
| Ok | Green, on | No error |
| Error | Off | Malfunction of module if E-bus LED = On Inoperative if E-bus LED = Off |
| | Red, 1x | Short circuit |
| | Red, 2x | Low voltage |
| | Red, 4x | EtherCAT watchdog control |
| | Red, 6x | Module-specific fault |
| | Red, 7x | Configuration error (E-bus pre-operational), no. of process data differs from that in the module |
| Defective | Red, on | Module defective |

LED "Power"

The LED labelled "Power" indicates the state of the I/O module's I/O power supply.

| State | LED flash code | Explanation |
|-------|----------------|----------------------|
| On | Green, on | 24 VDC supply ok |
| Off | Off | 24 VDC supply not ok |

LEDs "Channel"

The "Channel" LEDs indicate the state of every channel.

| State | LED flash code | Explanation |
|-------|----------------|-----------------------------------|
| On | Green, on | Channel enabled |
| Off | Off | Channel disabled |
| Error | Red, 1x | Short circuit |
| | Red, 3x | Wire failure |
| | Red, 5x | Excessive temp. of output drivers |

Function

The AO4 module has 4 analogue outputs. Every channel can be separately set to the unipolar or bipolar output of voltages or currents.

Table "Analogue voltage/current values"

| Measured value | | | Variable value | | | | |
|----------------|---------|---------|----------------|-------------|--|-----------------|-------------|
| ± 10 | 0 .. 10 | 0 .. 20 | Bipolar [INT] | | Unipolar *Data type conversion required | | |
| V | V | mA | Decimal | Hexadecimal | Decimal [INT] | Decimal [UINT*] | Hexadecimal |
| -10 | | | -32768 | 16#8000 | | | |
| -9 | | | -29492 | 16#8CCC | | | |
| -8 | | | -26215 | 16#9999 | | | |
| -7 | | | -22938 | 16#A666 | | | |
| -6 | | | -19661 | 16#B333 | | | |
| -5 | | | -16384 | 16#C000 | | | |
| -4 | | | -13108 | 16#CCCC | | | |
| -3 | | | -9831 | 16#D999 | | | |

| 5 | 5 | 10 | 16383 | 16#3FFF | 32767 | 32767 | 16#7FFF |
| 6 | 6 | 12 | 19660 | 16#4CCC | -26216 | 39320 | 16#9998 |
| 7 | 7 | 14 | 22936 | 16#5998 | -19662 | 45874 | 16#B332 |
| 8 | 8 | 16 | 26213 | 16#6665 | -13109 | 52427 | 16#CCCB |
| 9 | 9 | 18 | 29490 | 16#7332 | -6555 | 58981 | 16#E665 |
| 10 | 10 | 20 | 32767 | 16#7FFF | -2 | 65534 | 16#FFFE |

Analogue Outputs

Write the output values into the following variables:

| Variable | Data type | Explanation |
|-----------|-----------|--------------------------------------|
| Channel_n | INT | Output value of channel n (n=0...3). |

Module Control

The module provides you with various operational options.

To set up the module choose the options as appropriate and accept by setting control bit "SetOptions" to a rising edge.

The module will confirm by returning "OptionsSet".

There are various "module error" bits that the module uses to indicate errors. The states of the error bits are retained and also used for error indication by the "IO" LED.

To reset the error bits set control bit "ResetError" to a rising edge.

| Variable | Data type | Explanation |
|------------|-----------|--------------------------------------|
| SetOptions | BOOL | Rising edge → accepts module options |
| ResetError | BOOL | Rising edge → acknowledges error |

Module Options

The following options are available for module AO4:

| Variable | Data type | Explanation | |
|-------------------------------|-----------|---|----------------|
| Channel_n_On | BOOL | Enables channel n. (set to high impedance to disable) | |
| Channel_n_Current | BOOL | Sets channel n to current output mode | |
| Channel_n_n+1_Unipolar | BOOL | Channels 0 & 1 or 2 & 3 in unipolar mode | |
| Outputs_Active_Shortcut | BOOL | Leave outputs unchanged after short circuit | |
| Outputs_Active_Undervoltage | BOOL | Leave outputs unchanged after low voltage | |
| Outputs_Active_Specific_Error | BOOL | Leave outputs unchanged after module-specific error (see 0) | |
| Outputs_Active_EtherCAT_Error | BOOL | Leave outputs unchanged after short circuit | |
| n | | 0 ... 3 | Channel number |

To set and accept options, see section Module Control.

Module State

The following module states are indicated:

| Variable | Data type | Explanation |
|----------------|-----------|--|
| Shortcut | BOOL | Short circuit (not used) |
| Undervoltage | BOOL | Low voltage (supplied power < 19.2V) |
| Watchdog | BOOL | Internal watchdog of module |
| EtherCAT_Error | BOOL | Configuration error or watchdog control |
| Specific_Error | BOOL | Module-specific fault |
| OptionsSet | BOOL | Sent by module to acknowledge SetOptions |

To reset the messages, see section Module Control.

Module-specific Messages

Apart from the module state, there is a set of messages containing details about the current state of the module:

| Variable | Data type | Explanation |
|--------------------|-----------|--|
| Channel_n_Overtemp | BOOL | Short circuit in output driver of channel n, i.e. the temperature is > 140 °C (automatic switch-off) (see Module Options, Outputs_Active_Shortcut) |
| Undervoltage_24 | BOOL | Less than 19.2 V supplied to the module (see Module Options, Outputs_Active_Undervoltage) |
| Channel_n_Open | BOOL | Current mode: channel n load is gt 500Ω Specific_Error=TRUE |
| Channel_n_Shortcut | BOOL | Voltage mode: channel n load is lt 600Ω Specific_Error=TRUE |

These messages are automatically reset when the state concerned has returned to normal.

Messages Channel_n_Open and Channel_n_Shortcut are combined into a single "Specific_Error" state of the module and output to the IO LED as "module-specific error".

Conversion Time

The AO4 module's cycle time (time from importing the output values till starting the DA converters) is 320 µs, irrespective of the number of active channels.

L- 0 V

| | Information |
|---|--------------------|
| Module 694 442 52 Kuhnke FIO AO4 16-Bit is the successor module NOT compatible with module 694 442 02 Ventura FIO AO4 12-Bit. | |
| The module complies with ETG guidelines. | |
| Before replacing a Ventura/Kuhnke FIO AO4 12-Bit module (694 442 02) with a Kuhnke FIO AO4 16-Bit module (694 442 52), you must modify the EtherCAT master's control program. | |

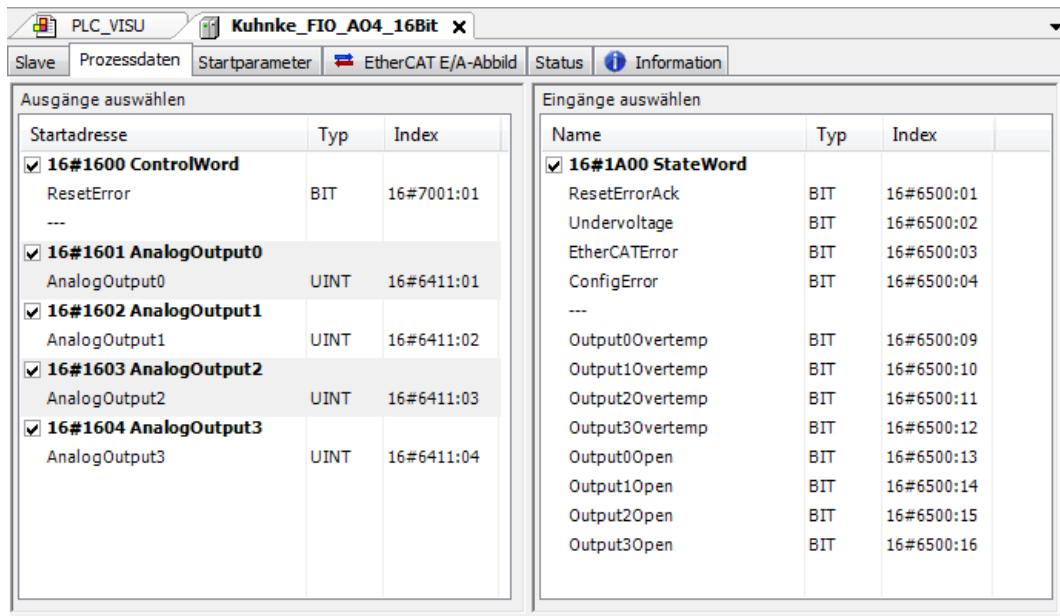

Please note the following differences:

| Ventura FIO AO4 12-Bit (old) | Kuhnke FIO AO4 16-Bit (new) |
|---------------------------------------|--|
| Current: 0...±20mA | Current: 0...+20mA |
| Short-circuit detectable | Short-circuit not detectable but outputs are short circuit-protected |
| Output not synchronised with EtherCAT | Output synchronised with SM or DC |

Output of the analogue values can be synchronised with DC (Distributed Clocks) or SM (Sync Manager).

The process data objects stored as variables in the EtherCAT master's control program are used to access the output values and the module state.

Service data objects (SDO) are available for details and settings.

You may run the configuration tool offline to change some settings of module AO4 16-Bit (such as the properties of each of the outputs). The EtherCAT master will apply the settings when starting up the module.

You can also use the SDO transfer components available for the EtherCAT master to change settings at runtime.

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|-----------|----------------|--|
| Ok | Green, on | No error |
| Error | Off | Malfunction of module if E-bus LED = On |
| | | Inoperative if E-bus LED = Off |
| | Red, 1x | Short circuit |
| | Red, 2x | Low voltage |
| | Red, 4x | EtherCAT watchdog control |
| | Red, 6x | Module-specific fault |
| | Red, 7x | Configuration error (E-bus pre-operational), no. of process data differs from that in the module |
| Defective | Red, on | Module defective |

LED "Power"

The LED labelled "Power" indicates the state of the I/O module's I/O power supply.

| State | LED flash code | Explanation |
|-------|----------------|----------------------|
| On | Green, on | 24 VDC supply ok |
| Off | Off | 24 VDC supply not ok |

LEDs "Channel"

The "Channel" LEDs indicate the state of every channel.

| State | LED flash code | Explanation |
|-------|----------------|-----------------------------------|
| On | Green, on | Channel enabled |
| Off | Off | Channel disabled |
| Error | Red, 1x | Short circuit |
| | Red, 3x | Wire failure |
| | Red, 5x | Excessive temp. of output drivers |

Function

The AO4 module has 4 analogue outputs. Every channel can be separately set to the unipolar or bipolar output of voltages or currents.

To output voltage or current readings (measured values) to the analogue outputs, verify that the associated output variables contain these values in the 2-byte two's complement format. The letter 'n' in the tables below represents the channel number (n=0...3).

Table "Analogue voltage/current values"

| Measured value | | | | Variable value (@ 16 bits) | | | |
|----------------|------|-------|------|----------------------------|-------------|-----------------|-------------|
| $\pm 10 / 10$ | 0.20 | 4..20 | 0.24 | Bipolar [UINT] | | Unipolar [UINT] | |
| Volt | mA | mA | mA | Decimal | Hexadecimal | Decimal | Hexadecimal |
| -10 | | | | 32768 | 16#8000 | | |
| -9 | | | | 36044 | 16#8CCC | | |
| -8 | | | | 39321 | 16#9999 | | |

| 9 | 18 | 18.4 | 21.6 | 29490 | 16#7332 | 58981 | 16#E665 |
| 10 | 20 | 20.0 | 24.0 | 32767 | 16#7FFF | 65534 | 16#FFFE |

StateWord

The state word is indicative of the module state:

| Bit | Name | Explanation |
|-----|-------------------|---|
| 0 | ResetErrorAck | Acknowledges "Reset Error" in Module Control |
| 1 | Undervoltage24 | 24V supply low |
| 2 | EtherCATError | Sync Manager Watchdog |
| 3 | ConfigError | Mismatch of Sync Manager's quantity structure |
| 4 | - | |
| 5 | - | |
| 6 | - | |
| 7 | - | |
| 8 | Output 0 Overtemp | Over-temperature detected by output driver (automatic switch-off) |
| 9 | Output 1 Overtemp | Over-temperature detected by output driver (automatic switch-off) |
| 10 | Output 2 Overtemp | Over-temperature detected by output driver (automatic switch-off) |
| 11 | Output 3 Overtemp | Over-temperature detected by output driver (automatic switch-off) |
| 12 | Output 0 Open | If there is no current in Current mode |
| 13 | Output 1 Open | If there is no current in Current mode |

| Bit | Name | Explanation |
|-----|---------------|--|
| 14 | Output 2 Open | If there is no current in Current mode |
| 15 | Output 3 Open | If there is no current in Current mode |

Analogue Outputs

Write the output values into the following variables:

| Variable | Data type | Explanation |
|---------------|-----------|--------------------------------------|
| AnalogOutputn | UINT | Output value of channel n (n=0...3). |

ControlWord

The control word contains a bit for acknowledging errors.

| Bit | Name | Explanation |
|------|------------|--|
| 0 | ResetError | 0 -> errors are retained, 1 -> errors cleared after removing their cause |
| 1-15 | - | not used |

RO=read-only, RW= read/write, P=process image

Technical Data

Analogue outputs 4
 Resolution 16 bit
 Output frequency Synchronised with SM/DC
 Intrinsic error ±0.2%
 Temperature error ±0.005%/K
 Destruction limit
 (external voltages) 15V

Voltage:

Measuring range 0 ... 10V, ± 10V
 Short circuit protection Yes
 Short circuit current max. 30mA
 Load resistance min. 1kΩ
 Settling time 0 → 10V: ≤22μs at 2kΩ/<200pF

Current:

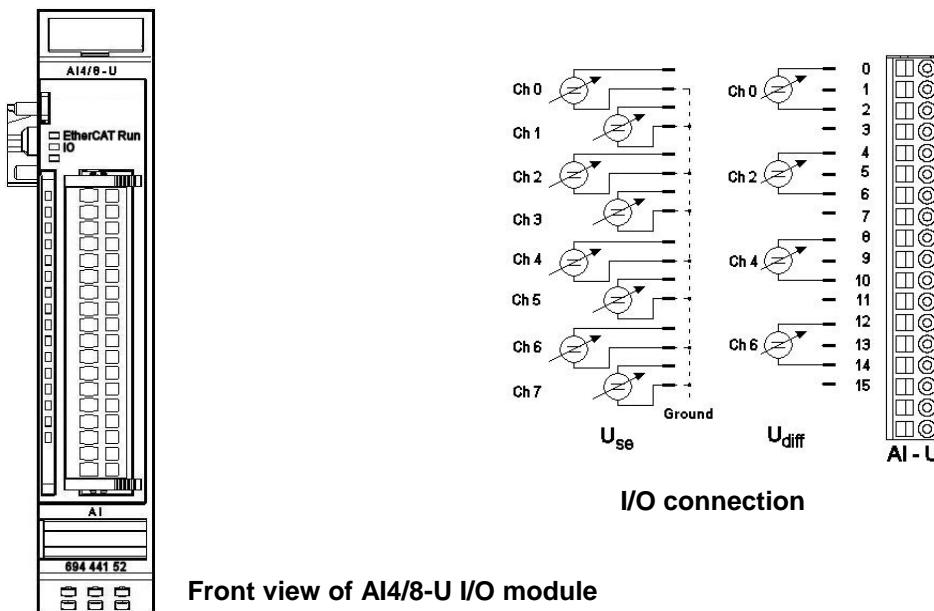

Measuring range 0...20mA, 4...20mA, 0...24mA
 Load resistance max. 500Ω, max. 1mH (inductive)
 Settling time 0 → 16V: ≤25μs at 300Ω/<1mH

Baud rate 100 Mbit/s
 Controller ASIC ET1200
 E-bus connector 10-pole system plug in side wall
 Terminating module not required
 IO/power connection 18-pin plug
 Power supply 24 VDC -20% +25%
 E-bus load 150 mA
 Part no. 694.442.52 16-Bit (CoE)

Approval:.....

5.4.4 AI4/8-U

Terminals

The module needs no separate 24V connector. Power is supplied to the module through the E-bus connector.

Operative earth / shielding of analogue wires → section 0

Information

Module 694 441 52 Kuhnke FIO AI4 8-U is the successor module NOT compatible with module 694 441 02 Ventura FIO AI4 8-U.

The module complies with ETG guidelines.

Before replacing a Ventura/Kuhnke FIO AI4 8-U module (694 441 02) with a Kuhnke FIO AI4 8-U module (694 441 52), you must modify the EtherCAT master's control program.

Status LEDs

LED "EtherCAT Run"

The LED labelled "EtherCAT Run" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|-------|----------------|---|
| Ok | Green, on | No error |
| Error | Off | Malfunction of module if E-bus LED = On |
| | | Inoperative if E-bus LED = Off |
| | Red, 4x | EtherCAT watchdog control |
| | Red, 7x | Configuration error (E-bus pre-operational), no. of |

| State | LED flash code | Explanation |
|-----------|----------------|--|
| | | process data differs from that in the module |
| Defective | Red, on | Module defective |

LED "Power"

There is no LED labelled "Power" because a separate power feed is not required.

LEDs "Channel"

The "Channel" LEDs indicate the state of every channel.

| State | LED flash code | Explanation |
|-------|----------------|------------------|
| On | Green, on | Channel enabled |
| Off | Off | Channel disabled |

Function

The AI4/8-U module has 8 analogue inputs. If signal lines are single-ended (measured against earth, L-), 8 channels are available. To measure differential signals, you will need 2 channels for every signal, i.e. you can pick up no more than 4 differential signals. Channels can be combined as follows: 0/1, 2/3, 4/5 and 6/7.

Measured Value

Table "Analogue voltage values"

| Measured value | | | Variable value (@ 16 bits) | | | |
|----------------|------|--------|----------------------------|-------------|---|-------------|
| ±10 V | ±5 V | ±2,5 V | Bipolar | | Unipolar [UINT*] * Data type conversion required | |
| Volt | Volt | Volt | Decimal | Hexadecimal | Decimal | Hexadecimal |
| -10 | -5 | -2.5 | -32768 | 16#8000 | | |
| -9 | -4.5 | -2.25 | -29492 | 16#8CCC | | |

| -6 | -3 | -1.5 | -19661 | 16#B333 | | |
| -5 | -2.5 | -1.25 | -16384 | 16#C000 | | |
| -4 | -2 | -1 | -13108 | 16#CCCC | | |
| -3 | -1.5 | -0.75 | -9831 | 16#D999 | | |
| -2 | -1 | -0.5 | -6574 | 16#E666 | | |
| -1 | -0.5 | -0.25 | -3292 | 16#F324 | | |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 1 | 0.5 | 0.25 | 3276 | 16#0CCC | 6553 | 16#1999 |
| 2 | 1 | 0.5 | 6553 | 16#1999 | 13107 | 16#3332 |
| 3 | 1.5 | 0.75 | 9830 | 16#2666 | 19660 | 16#4CCC |
| 4 | 2 | 1 | 13106 | 16#3332 | 26214 | 16#6665 |
| 5 | 2.5 | 1.25 | 16383 | 16#3FFF | 32767 | 16#7FFF |
| 6 | 3 | 1.5 | 19660 | 16#4CCC | 39320 | 16#9998 |
| 7 | 3.5 | 1.75 | 22936 | 16#5998 | 45874 | 16#B332 |
| 8 | 4 | 2 | 26213 | 16#6665 | 52427 | 16#CCCB |
| 9 | 4.5 | 2.25 | 29490 | 16#7332 | 58981 | 16#E665 |
| 10 | 5 | 2.5 | 32767 | 16#7FFF | 65534 | 16#FFFE |

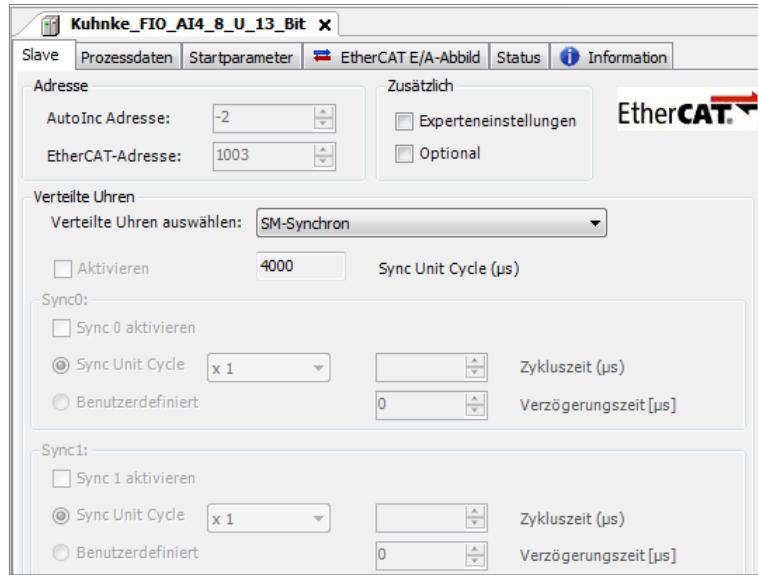

Information

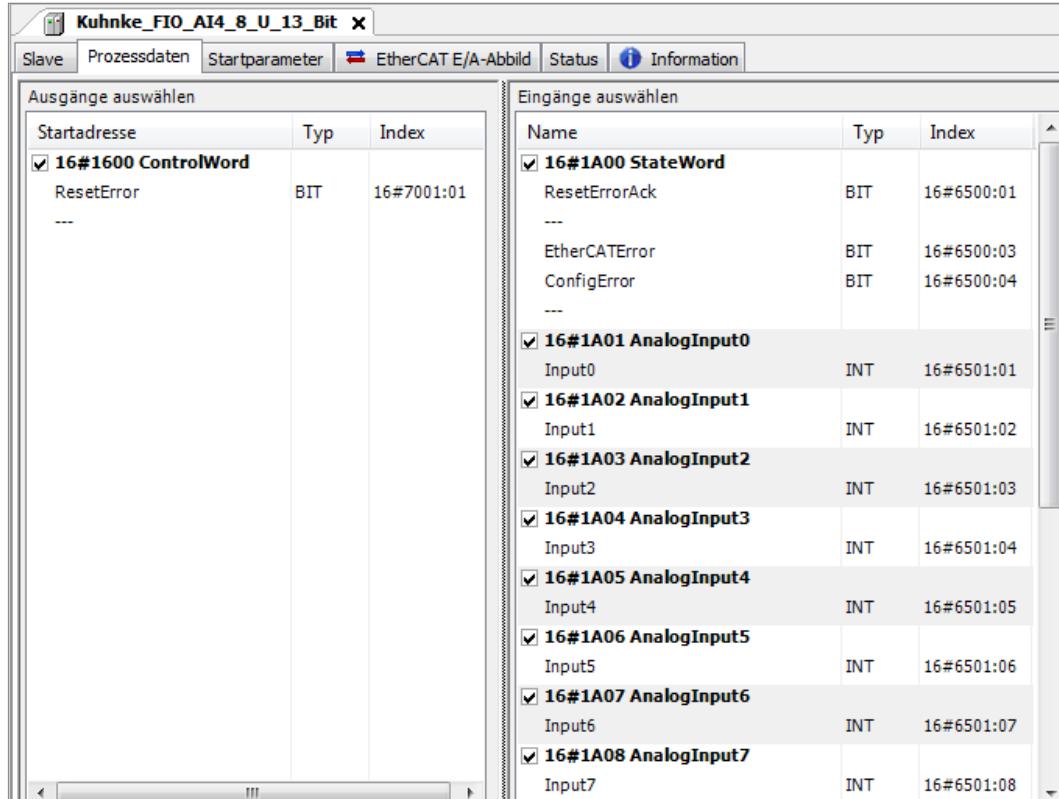

If the inputs are not used but switched on, the measured values displayed in the I / O image are floated. To prevent this, you should deactivate the measurement channel at the start parameters or set the input to ground (short-circuit when measuring differential signals).

To Set up the Options

Conversion of the analogue values can be synchronised with DC (Distributed Clocks) or SM (Sync Manager).

The process data objects stored as variables in the EtherCAT master's control program are used to access the input values and the module state.

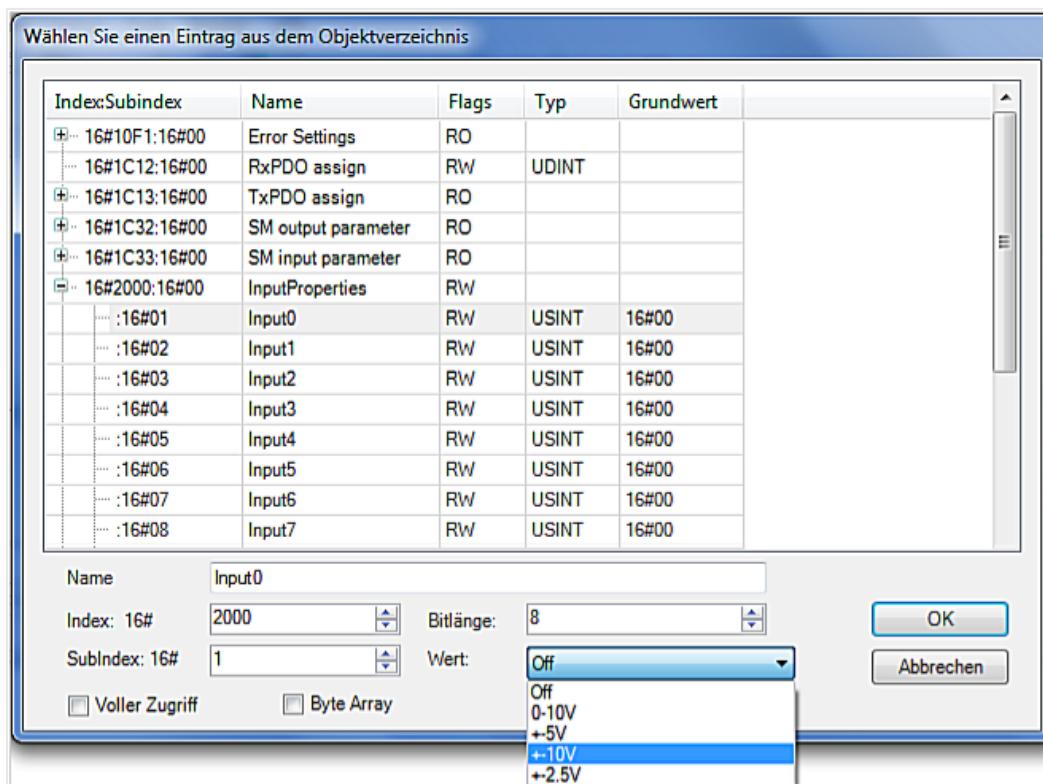

Service data objects (SDO) are available for details and settings.

You may run the configuration tool offline and choose the "Startup Parameters" to change some settings of module AI4/8U 16-Bit (such as the properties of each of the inputs). The EtherCAT master will apply the settings when starting up the module.

You can also use the SDO transfer components available for the EtherCAT master to change settings at runtime.

Click/tap on "Add...", choose an object, and set the appropriate value.

Options

You can set up the following options:

| Name | Value | Explanation |
|-----------------|----------|--|
| InputProperties | 0 | Off (default) |
| | 1 | 0-10V |
| | 2 | ±5 V |
| | 3 | ±10 V |
| | 4 | ±2,5 V |
| InputSwitch | 0 | Single-Ended (default) |
| | 1 | Differential |
| Average | n=1..255 | Inputn= average after n cycles (default=1) |

StateWord

The state word is indicative of the module state:

| Bit | Name | Explanation |
|-----|---------------|--|
| 0 | ResetErrorAck | Acknowledges "Reset Error" in Module Control |
| 1 | | not used |
| 2 | EtherCATError | Sync Manager Watchdog |

| | | |
|------|-------------|---|
| 3 | ConfigError | Mismatch of Sync Manager's quantity structure |
| 4-15 | | not used |

Analogue Inputs

Check the following variables for the digitised input values:

| Variable | Data type | Explanation |
|----------|-----------|-------------------------------|
| Inputn | INT | Value of channel n (n=0...7). |

ControlWord

The control word contains a bit for acknowledging errors.

| Bit | Name | Explanation |
|------|------------|--|
| 0 | ResetError | 0 -> errors are retained, 1 -> errors cleared after removing their cause |
| 1-15 | - | not used |

Technical Data

Analogue inputs 8 single-ended or 4 differential

Measuring range 0 ... 10V, \pm 5V, \pm 10V, \pm 2,5V

Resolution 13 bit

Start AD conversion synchronised with DC / SM

Conversion time 464 μ s (if all channels are active)

Internal resistance > 1M Ω

Input filter cutoff frequency typ. 1kHz

Measuring error < \pm 0.4%, typ. < \pm 0.2% of final value

Baud rate 100 Mbit/s

Controller ASIC ET1200

E-bus connector 10-pole system plug in side wall

Terminating module not required

IO/power connection 18-pin plug

Power supply 24 VDC -20% +25%

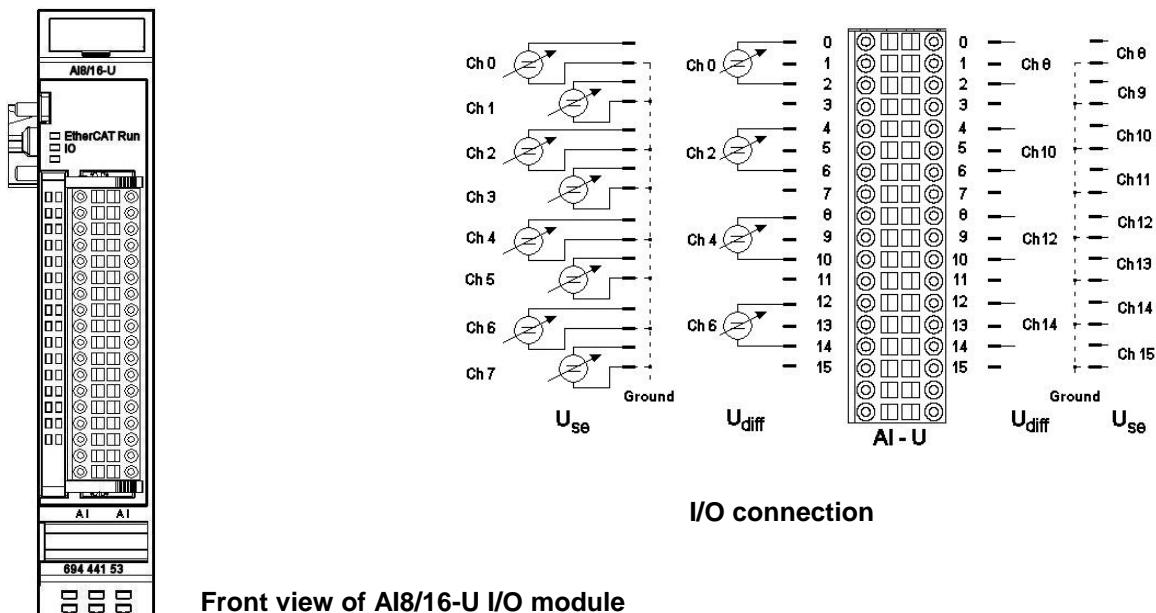

E-bus load 190 mA

Part no. 694.441.52 13-Bit (CoE)

Approval:.....

5.4.5 AI8/16-U

Terminals

The module needs no separate 24V connector. Power is supplied to the module through the E-bus connector.

Operative earth / shielding of analogue wires → section 0

Status LEDs

LED "EtherCAT Run"

The LED labelled "EtherCAT Run" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|-------|----------------|---|
| Ok | Green, on | No error |
| Error | Off | Malfunction of module if E-bus LED = On |
| | | Inoperative if E-bus LED = Off |

| State | LED flash code | Explanation |
|-----------|----------------|--|
| | Red, 4x | EtherCAT watchdog control |
| | Red, 7x | Configuration error (E-bus pre-operational), no. of process data differs from that in the module |
| Defective | Red, on | Module defective |

LED "Power"

There is no LED labelled "Power" because a separate power feed is not required.

LEDs "Channel"

The "Channel" LEDs indicate the state of every channel.

| State | LED flash code | Explanation |
|-------|----------------|------------------|
| On | Green, on | Channel enabled |
| Off | Off | Channel disabled |

Function

The AI8/16-U module has 16 analogue inputs. If signal lines are single-ended (measured against earth, L-), 16 channels are available. To measure differential signals, you will need 2 channels for every signal, i.e. you can pick up no more than 8 differential signals. Channels can be combined as follows: 0/1, 2/3, 4/5, 6/7, 8/9, 10/11, 12/13 and 14/15.

Table of measured values:

| Measured value | | | Variable value (@ 16 bits) | | | |
|----------------|------|--------|----------------------------|-------------|-------------------------------|-------------|
| ±10 V | ±5 V | ±2,5 V | Bipolar | | Unipolar [UINT [*]] | |
| Volt | Volt | Volt | Decimal | Hexadecimal | Decimal | Hexadecimal |
| -10 | -5 | -2.5 | -32768 | 16#8000 | | |
| -9 | -4.5 | -2.25 | -29492 | 16#8CCC | | |
| -8 | -4 | -2 | -26215 | 16#9999 | | |
| -7 | -3.5 | -1.75 | -22938 | 16#A666 | | |
| -6 | -3 | -1.5 | -19661 | 16#B333 | | |
| -5 | -2.5 | -1.25 | -16384 | 16#C000 | | |
| -4 | -2 | -1 | -13108 | 16#CCCC | | |
| -3 | -1.5 | -0.75 | -9831 | 16#D999 | | |
| -2 | -1 | -0.5 | -6574 | 16#E666 | | |
| -1 | -0.5 | -0.25 | -3292 | 16#F324 | | |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 1 | 0.5 | 0.25 | 3276 | 16#0CCC | 6553 | 16#1999 |
| 2 | 1 | 0.5 | 6553 | 16#1999 | 13107 | 16#3332 |
| 3 | 1.5 | 0.75 | 9830 | 16#2666 | 19660 | 16#4CCC |
| 4 | 2 | 1 | 13106 | 16#3332 | 26214 | 16#6665 |
| 5 | 2.5 | 1.25 | 16383 | 16#3FFF | 32767 | 16#7FFF |
| 6 | 3 | 1.5 | 19660 | 16#4CCC | 39320 | 16#9998 |
| 7 | 3.5 | 1.75 | 22936 | 16#5998 | 45874 | 16#B332 |
| 8 | 4 | 2 | 26213 | 16#6665 | 52427 | 16#CCCB |
| 9 | 4.5 | 2.25 | 29490 | 16#7332 | 58981 | 16#E665 |
| 10 | 5 | 2.5 | 32767 | 16#7FFF | 65534 | 16#FFFE |

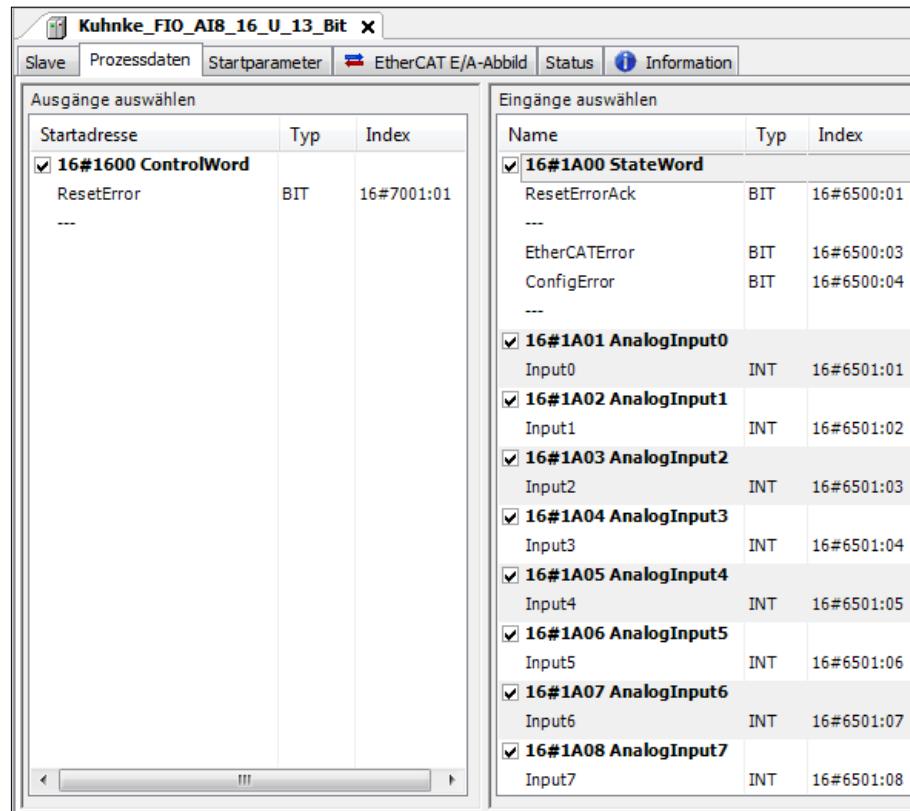

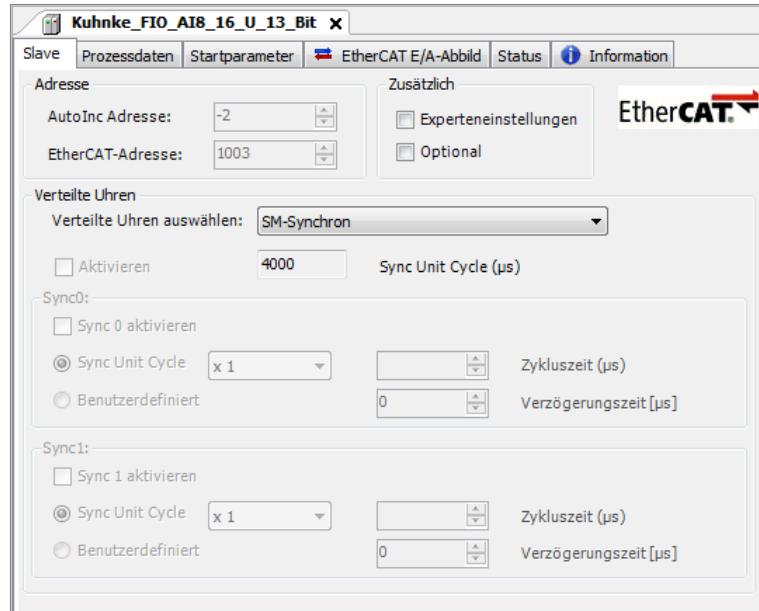

Information

If the inputs are not used but switched on, the measured values displayed in the I / O image are floated. To prevent this, you should deactivate the measurement channel at the start parameters or set the input to ground (short-circuit when measuring differential signals).

To Set up the Options

Conversion of the analogue values can be synchronised with DC (Distributed Clocks) or SM (Sync Manager).

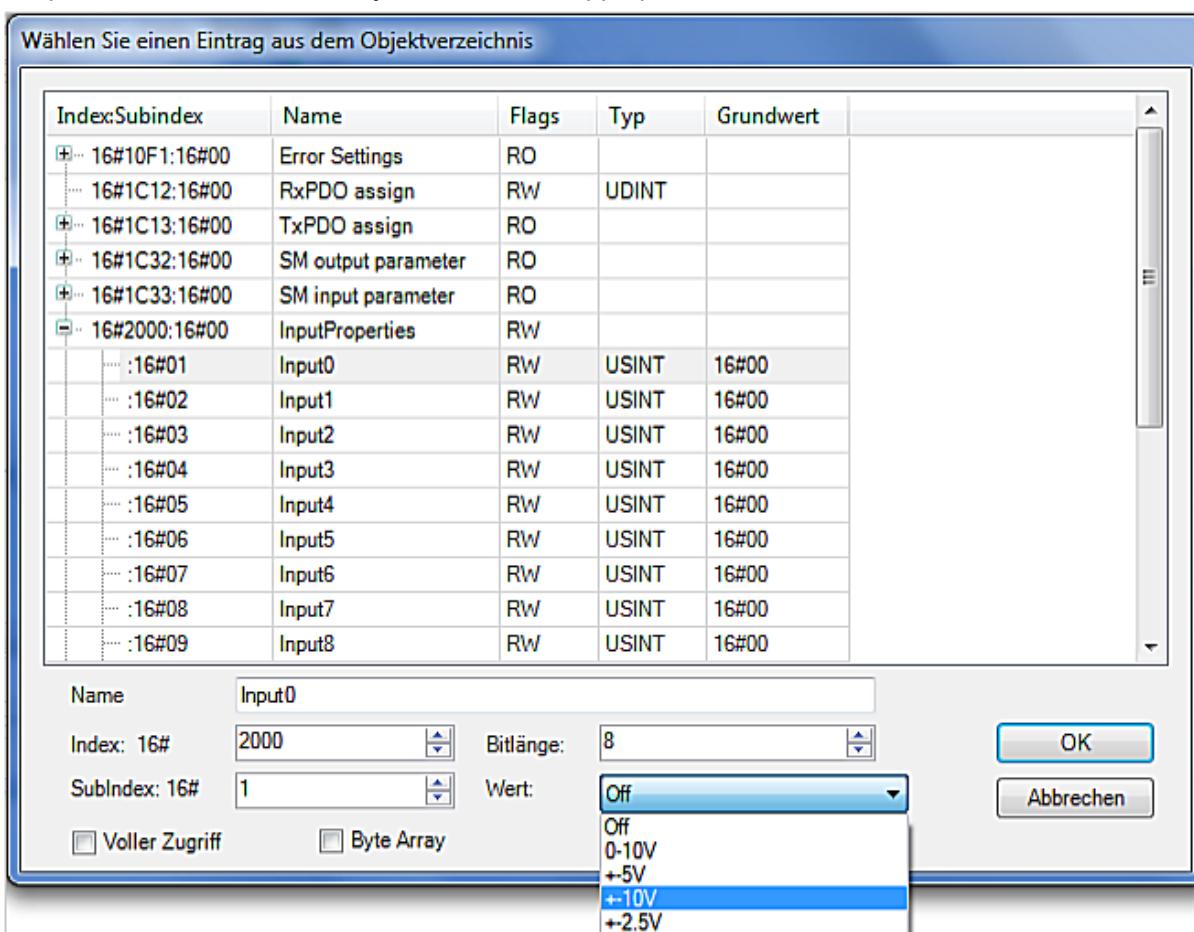

The process data objects stored as variables in the EtherCAT master's control program are used to access the input values and the module state.

Service data objects (SDO) are available for details and settings.

You may run the configuration tool offline and choose the "Startup Parameters" to change some settings of module AI4/8U 16-Bit (such as the properties of each of the inputs). The EtherCAT master will apply the settings when starting up the module.

You can also use the SDO transfer components available for the EtherCAT master to change settings at runtime.

Click/tap on "Add...", choose an object, and set the appropriate value.

Options

You can set up the following options for every channel:

| Name | Value | Explanation |
|-----------------|----------|--|
| InputProperties | 0 | Off (default) |
| | 1 | 0-10V |
| | 2 | ±5 V |
| | 3 | ±10 V |
| | 4 | ±2,5 V |
| InputSwitch | 0 | Single-Ended (default) |
| | 1 | Differential |
| Average | n=1..255 | Inputn= average after n cycles (default=1) |

StateWord

The state word is indicative of the module state:

| Bit | Name | Explanation |
|------|---------------|---|
| 0 | ResetErrorAck | Acknowledges "Reset Error" in Module Control |
| 1 | | not used |
| 2 | EtherCATError | Sync Manager Watchdog |
| 3 | ConfigError | Mismatch of Sync Manager's quantity structure |
| 4-15 | | not used |

Analogue Inputs

Check the following variables for the digitised input values:

| Variable | Data type | Explanation |
|----------|-----------|--------------------------------|
| Inputn | INT | Value of channel n (n=0...15). |

ControlWord

The control word contains a bit for acknowledging errors.

| Bit | Name | Explanation |
|------|------------|--|
| 0 | ResetError | 0 -> errors are retained, 1 -> errors cleared after removing their cause |
| 1-15 | - | not used |

5.4.6 AI4-I

Front view of AI4-I I/O module

I/O connection

Terminals

The 24 V connector supplies power to the sensors.

Power is supplied to the module through the E-bus connector.

Operative earth / shielding of analogue wires → section 0

Information

Module 694 441 51 Kuhnke FIO AI4-I 12-Bit is the successor module NOT compatible with module 694 441 01 Ventura FIO AI4-I 12-Bit.

The module complies with ETG guidelines.

Before replacing a Ventura/Kuhnke FIO AI4-I 12-Bit module (694 441 01) with a Kuhnke FIO AI4-I 12-Bit module (694 441 51), you must modify the EtherCAT master's control program.

Status LEDs

LED "EtherCAT Run"

The LED labelled "EtherCAT Run" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|-------|----------------|--|
| Ok | Green, on | No error |
| Error | Off | Malfunction of module if E-bus LED = On |
| | | Inoperative if E-bus LED = Off |
| | Red, 4x | EtherCAT watchdog control |
| | Red, 7x | Configuration error (E-bus pre-operational), no. of process data differs from that in the module |

| State | LED flash code | Explanation |
|-----------|----------------|------------------|
| Defective | Red, on | Module defective |

LED "Power"

The LED labelled "Power" indicates the state of the power supplied to the I/O module's I/O sensors.

| State | LED flash code | Explanation |
|-------|----------------|----------------------|
| On | Green, on | 24 VDC supply ok |
| Off | Off | 24 VDC supply not ok |

LEDs "Channel"

The "Channel" LEDs indicate the state of every channel.

| State | LED flash code | Explanation |
|---|----------------|----------------------------------|
| On | Green, on | Channel enabled |
| Off | Off | Channel disabled |
| Added to the CoE variant (694 441 51 Kuhnke FIO AI4-I 12-Bit) | | |
| Error | Red, 1x | Current > 20.5 mA |
| | Red, 2x | Current < 3.5 mA (4..20 mA mode) |

Function

The AI4-I module has four analogue current signal inputs. Their measuring range can be set separately for every channel, i.e. either to 0..20mA or to 4..20mA.

Analogue Inputs

Check the following variable for the digitised input values:

| Variable | Data type | Explanation |
|--------------|-----------|--|
| AnalogInputn | INT | Value measured on channel n (n= 0...3) |

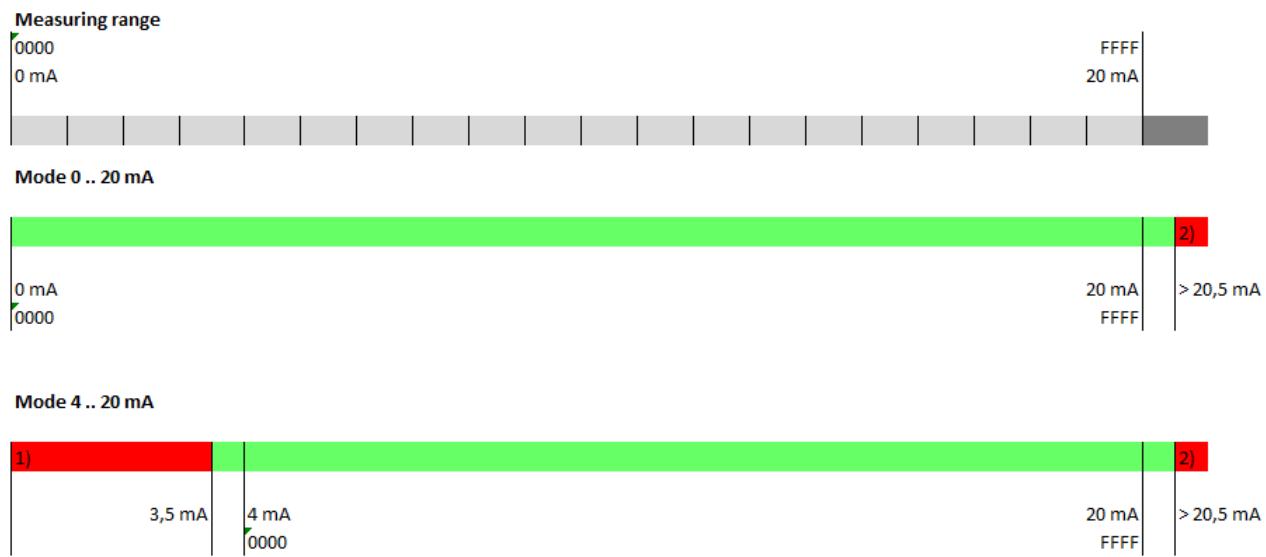

Measured value

Table "0-20 mA current mode"

| Current [mA] | Value [hex] |
|--------------|-------------|
| 0 | 0x0 |
| 10 | 0x7FFF |
| 20 | 0xFFFF |

Table "4-20 mA current mode"

| Current [mA] | Value [hex] |
|--------------|-------------|
| 4 | 0x0 |
| 12 | 0x7FFF |
| 20 | 0xFFFF |

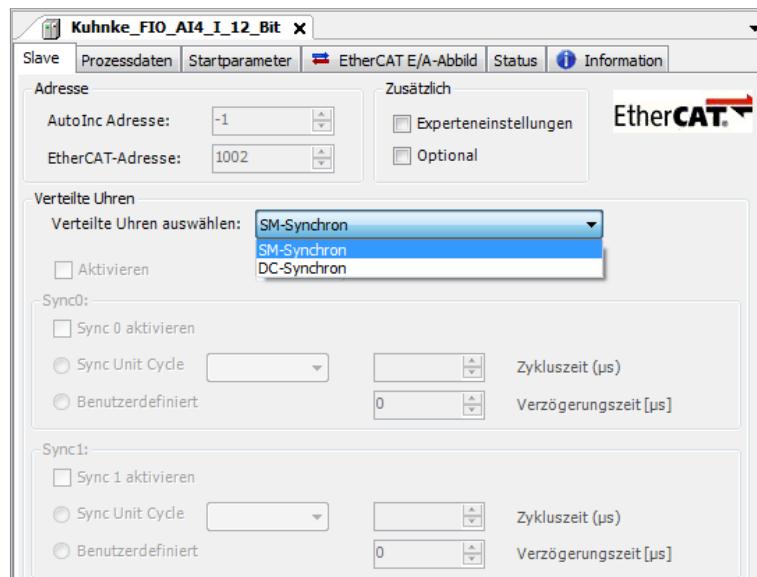

1) At a current of < 3.5 mA: EtherCat process image message "Input x low" and flash code at the input (red LED flashes 1x)

2) At a current of < 20.5 mA: EtherCat process image message "Input x high" and flash code at the input (red LED flashes 2x)

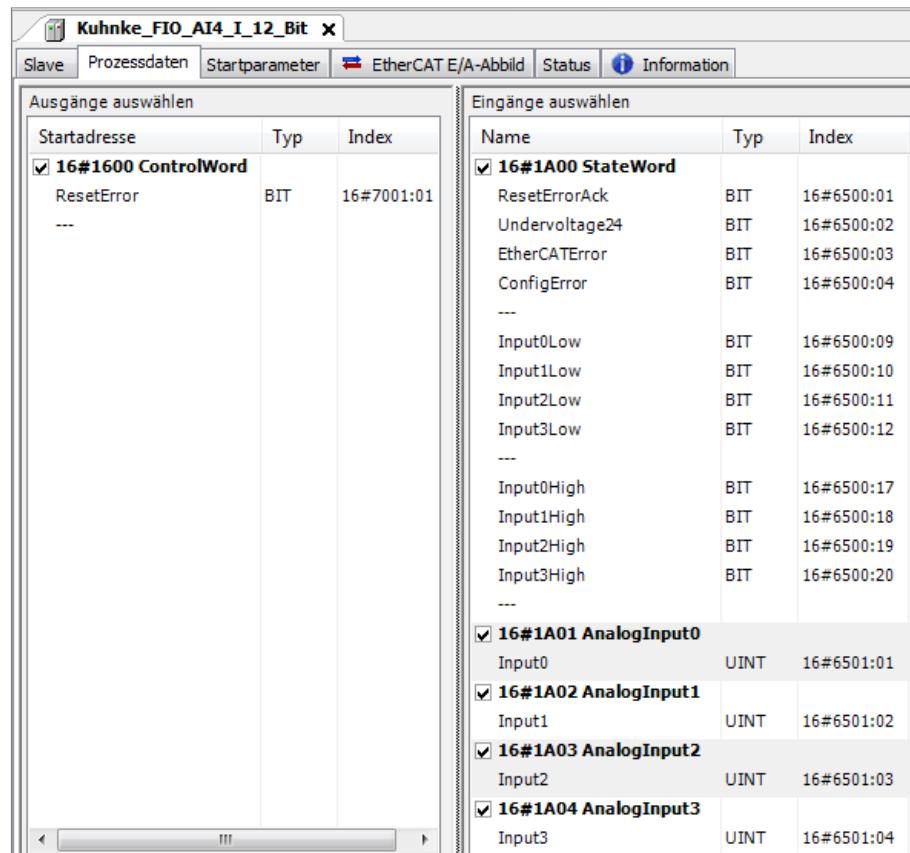

Measured & variable values and state of AI4-I CoE

To Set up the Options

Conversion of the analogue values can be synchronised with DC (Distributed Clocks) or SM (Sync Manager).

The process data objects stored as variables in the EtherCAT master's control program are used to access the input values and the module state.

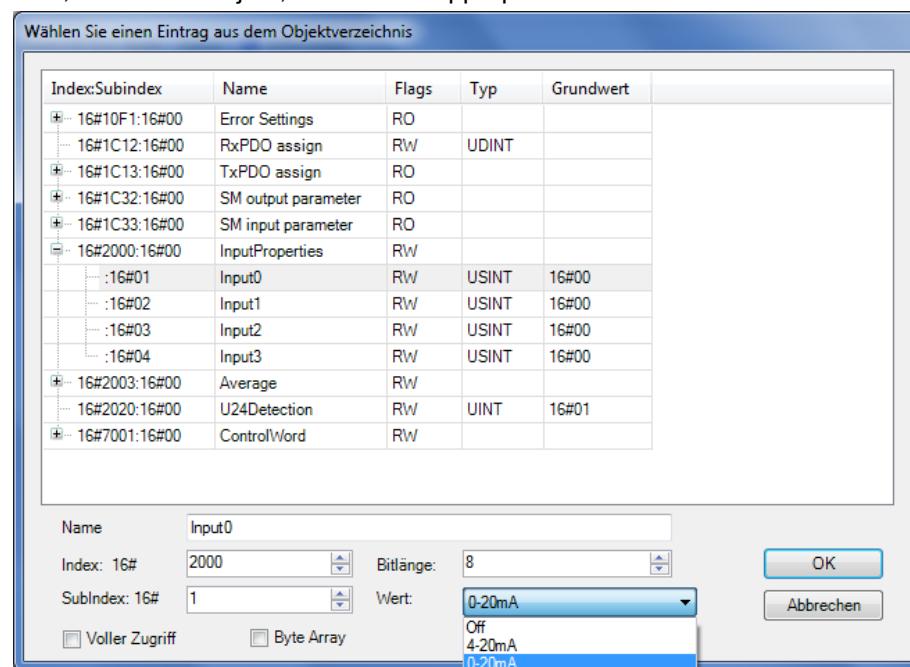

Service data objects (SDO) are available for details and settings.

You may run the configuration tool offline and choose the "Startup Parameters" to change some settings of module AI4-I 12-Bit (such as the properties of each of the inputs). The EtherCAT master will apply the settings when starting up the module.

You can also use the SDO transfer components available for the EtherCAT master to change settings at runtime.

Click/tap on "Add...", choose an object, and set the appropriate value.

Options

You can set up the following options for every channel:

| Name | Value | Explanation |
|-----------------|----------|--|
| InputProperties | 0 | Off (default) |
| | 5 | 4-20mA |
| | 6 | 0-20mA |
| Average | n=1..255 | Inputn= average after n cycles (default=1) |

StateWord

The state word (DWORD) is indicative of the module state:

| Bit | Name | Explanation |
|-------|----------------|---|
| 0 | ResetErrorAck | Acknowledges "Reset Error" in Module Control |
| 1 | Undervoltage24 | Power to passive sensors < 19 V (no error, just info) |
| 2 | EtherCATError | Sync Manager Watchdog |
| 3 | ConfigError | Mismatch of Sync Manager's quantity structure |
| 4-7 | | not used |
| 8 | Input0low | Current at 4-20mA < 3.5mA |
| 9 | Input1low | Current at 4-20mA < 3.5mA |
| 10 | Input2low | Current at 4-20mA < 3.5mA |
| 11 | Input3low | Current at 4-20mA < 3.5mA |
| 12-15 | | not used |
| 16 | Input0high | Current > 20.5 mA |
| 17 | Input1high | Current > 20.5 mA |
| 18 | Input2high | Current > 20.5 mA |
| 19 | Input3high | Current > 20.5 mA |
| 20-31 | - | not used |

Analogue Inputs

Check the following variables for the digitised input values:

| Variable | Data type | Explanation |
|----------|-----------|-------------------------------|
| Inputn | INT | Value of channel n (n=0...3). |

ControlWord

The control word contains a bit for acknowledging errors.

| Bit | Name | Explanation |
|------|------------|--|
| 0 | ResetError | 0 -> errors are retained, 1 -> errors cleared after removing their cause |
| 1-15 | - | not used |

Technical Data

Analogue inputs 4
 Measuring range 0...20mA, 4...20mA (final value: 20mA)
 Resolution 12 bit

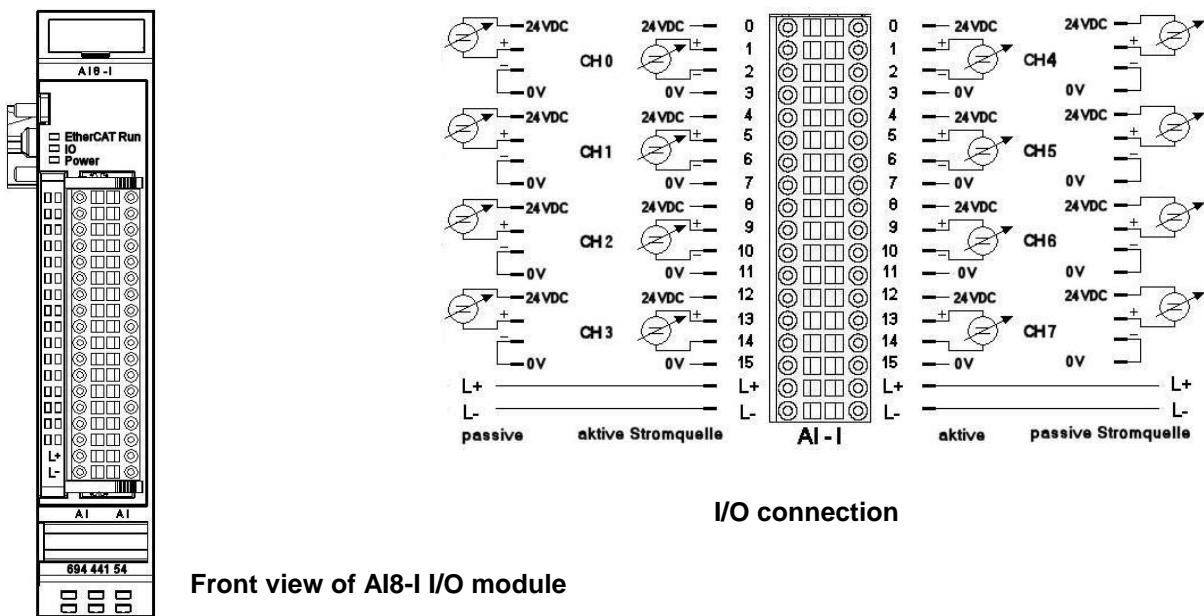

Start AD conversion synchronised with DC / SM
 Conversion time 235 µs (if all channels are active)
 Internal resistance < 300Ω
 Input filter cutoff frequency 100 kHz
 Measuring error < ±0.5%, typ. < ±0.4% of final value
 Supply of Sensors 24VDC, a total of max. 200mA

Baud rate 100 Mbit/s
 Controller ASIC ET1200
 E-bus connector 10-pole system plug in side wall
 Terminating module not required
 IO/power connection 18-pin plug
 Power supply 24 VDC -20% +25%
 E-bus load 190 mA
 Part no. 694.441.51 (CoE)

Approval:.....

5.4.7 AI8-I

Terminals

The 24 V connector supplies power to the sensors.

Power is supplied to the module through the E-bus connector.

Operative earth / shielding of analogue wires → section 0

Information

Module 694 441 54 Kuhnke FIO AI8-I 12-Bit is the successor module NOT compatible with module 694 441 04 Ventura FIO AI8-I 12-Bit.

The module complies with ETG guidelines.

Before replacing a Ventura/Kuhnke FIO AI8-I 12-Bit module (694 441 04) with a Kuhnke FIO AI8-I 12-Bit module (694 441 54), you must modify the EtherCAT master's control program.

Status LEDs

LED "EtherCAT Run"

The LED labelled "EtherCAT Run" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|-------|----------------|---|
| Ok | Green, on | No error |
| Error | Off | Malfunction of module if E-bus LED = On |

| State | LED flash code | Explanation |
|-----------|----------------|--|
| | | Inoperative if E-bus LED = Off |
| | Red, 4x | EtherCAT watchdog control |
| | Red, 7x | Configuration error (E-bus pre-operational), no. of process data differs from that in the module |
| Defective | Red, on | Module defective |

LED "Power"

The LED labelled "Power" indicates the state of the power supplied to the I/O module's I/O sensors.

| State | LED flash code | Explanation |
|-------|----------------|----------------------|
| On | Green, on | 24 VDC supply ok |
| Off | Off | 24 VDC supply not ok |

LEDs "Channel"

The "Channel" LEDs indicate the state of every channel.

| State | LED flash code | Explanation |
|---|----------------|----------------------------------|
| On | Green, on | Channel enabled |
| Off | Off | Channel disabled |
| Added to the CoE variant (694 441 51 Kuhnke FIO AI4-I 12-Bit) | | |
| Error | red | Current > 20.5 mA |
| | | Current < 3.5 mA (4..20 mA mode) |

Function

The AI8-I module has eight analogue current signal inputs. Their measuring range can be set separately for every channel, i.e. either to 0..20mA or to 4..20mA.

Analogue Inputs

Check the following variable for the digitised input values:

| Variable | Data type | Explanation |
|--------------|-----------|--|
| AnalogInputn | INT | Value measured on channel n (n= 0...7) |

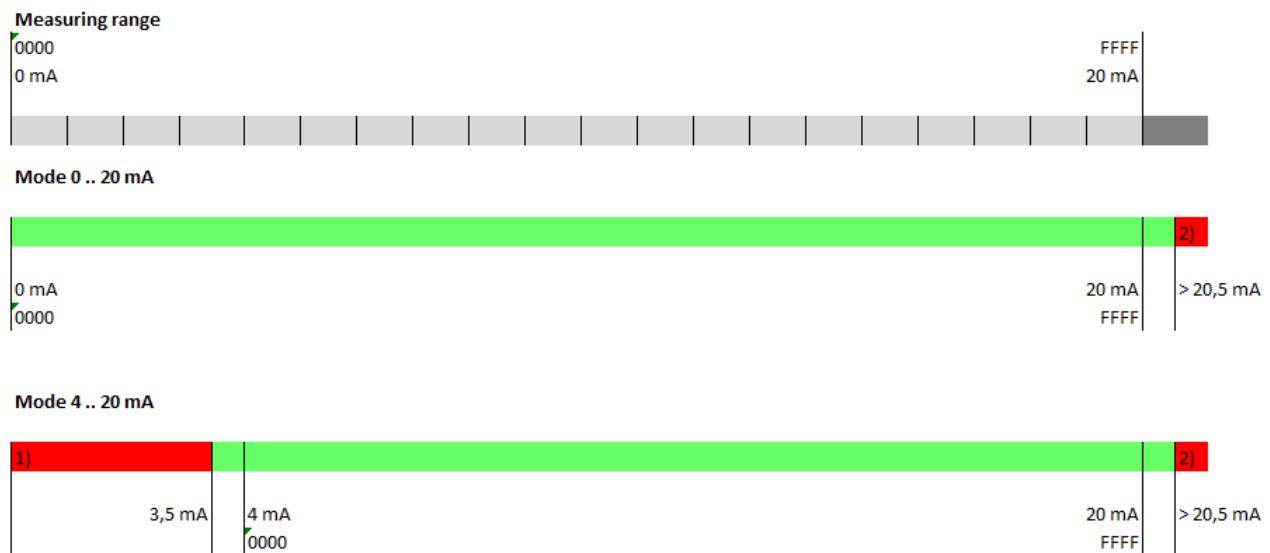

Measured value

Table "0-20 mA current mode"

| Current [mA] | Value [hex] |
|--------------|-------------|
| 0 | 0x0 |
| 10 | 0x7FFF |
| 20 | 0xFFFF |

Table "4-20 mA current mode"

| Current [mA] | Value [hex] |
|--------------|-------------|
| 4 | 0x0 |
| 12 | 0x7FFF |
| 20 | 0xFFFF |

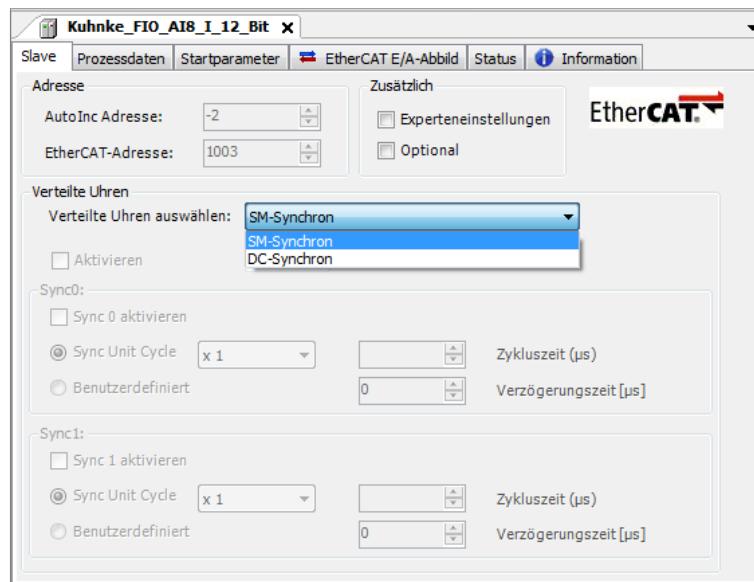

1) At a current of < 3.5 mA: EtherCat process image message "Input x low" and flash code at the input (red LED flashes 1x)

2) At a current of < 20.5 mA: EtherCat process image message "Input x high" and flash code at the input (red LED flashes 2x)

Measured & variable values and state of AI8-I CoE

To Set up the Options

Conversion of the analogue values can be synchronised with DC (Distributed Clocks) or SM (Sync Manager).

The process data objects stored as variables in the EtherCAT master's control program are used to access the input values and the module state.

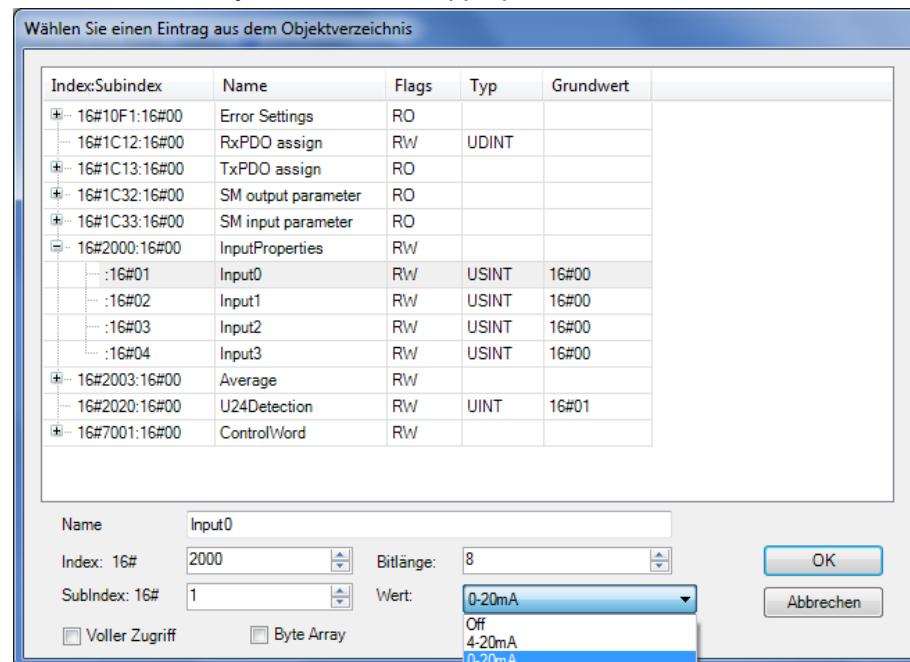

| Ausgänge auswählen | | | | Eingänge auswählen | | | |

| | | | | Input7High | BIT | 16#6500:24 | |
| | | | | --- | | | |

Service data objects (SDO) are available for details and settings.

You may run the configuration tool offline and choose the "Startup Parameters" to change some settings of module AI8-I 12-Bit (such as the properties of each of the inputs). The EtherCAT master will apply the settings when starting up the module.

You can also use the SDO transfer components available for the EtherCAT master to change settings at runtime.

Click/tap on "Add...", choose an object, and set the appropriate value.

Options

You can set up the following options for every channel:

| Name | Value | Explanation |
|-----------------|----------|--|
| InputProperties | 0 | Off (default) |
| | 5 | 4-20mA |
| | 6 | 0-20mA |
| Average | n=1..255 | Inputn= average after n cycles (default=1) |

StateWord

The state word (DWORD) is indicative of the module state:

| Bit | Name | Explanation |
|-------|----------------|---|
| 0 | ResetErrorAck | Acknowledges "Reset Error" in Module Control |
| 1 | Undervoltage24 | Power to passive sensors < 19 V (no error, just info) |
| 2 | EtherCATError | Sync Manager Watchdog |
| 3 | ConfigError | Mismatch of Sync Manager's quantity structure |
| 4-7 | | not used |
| 8 | Input0low | Current at 4-20mA < 3.5mA |
| 9 | Input1low | Current at 4-20mA < 3.5mA |
| 10 | Input2low | Current at 4-20mA < 3.5mA |
| 11 | Input3low | Current at 4-20mA < 3.5mA |
| 12 | Input4low | Current at 4-20mA < 3.5mA |
| 13 | Input5low | Current at 4-20mA < 3.5mA |
| 14 | Input6low | Current at 4-20mA < 3.5mA |
| 15 | Input7low | Current at 4-20mA < 3.5mA |
| 16 | Input0high | Current > 20.5 mA |
| 17 | Input1high | Current > 20.5 mA |
| 18 | Input2high | Current > 20.5 mA |
| 19 | Input3high | Current > 20.5 mA |
| 20 | Input4high | Current > 20.5 mA |
| 21 | Input5high | Current > 20.5 mA |
| 22 | Input6high | Current > 20.5 mA |
| 23 | Input7high | Current > 20.5 mA |
| 24-31 | - | not used |

Analogue Inputs

Check the following variables for the digitised input values:

| Variable | Data type | Explanation |
|----------|-----------|-------------------------------|
| Inputn | INT | Value of channel n (n=0...7). |

ControlWord

The control word contains a bit for acknowledging errors.

| Bit | Name | Explanation |
|------|------------|--|
| 0 | ResetError | 0 -> errors are retained, 1 -> errors cleared after removing their cause |
| 1-15 | - | not used |

Technical Data

Analogue inputs 8
Measuring range 0...20mA, 4...20mA (final value: 20mA)
Resolution 12 bit

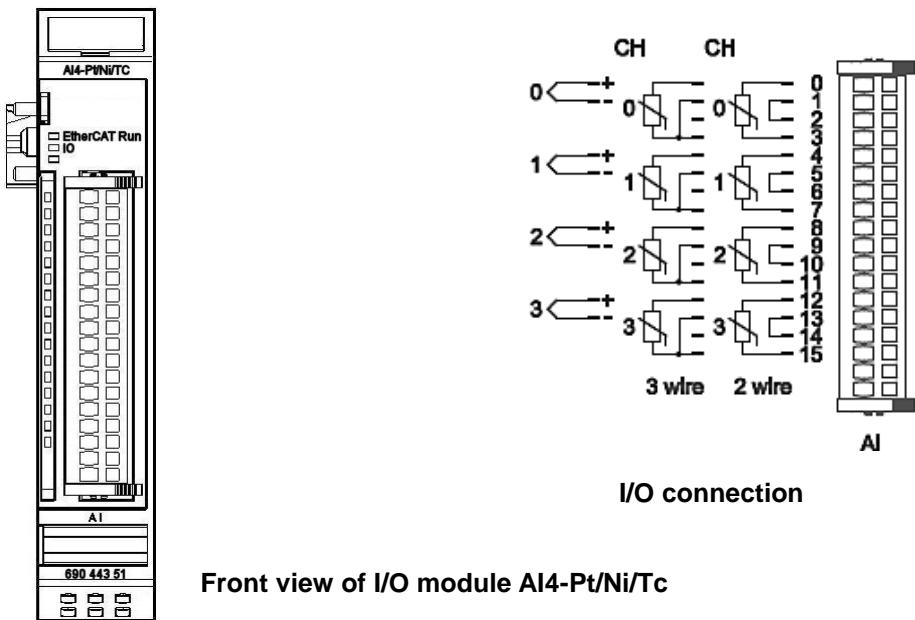

Start AD conversion synchronised with DC / SM
Conversion time 290 µs (if all channels are active)
Internal resistance < 300Ω
Input filter cutoff frequency 100 kHz
Measuring error < ±0.5%, typ. < ±0.4% of final value
Supply of Sensors 24VDC, a total of max. 200mA

Baud rate 100 Mbit/s
Controller ASIC ET1200
E-bus connector 10-pole system plug in side wall
Terminating module not required
IO/power connection 36-pin plug
Power supply 24 VDC -20% +25%
E-bus load 190 mA
Part no. 694.441.54 (CoE)

Approval:.....

5.4.8 AI4-Pt/Ni/TC

Terminals

The module needs no separate 24V connector. Power is supplied to the module through the E-bus connector.

Operative earth / shielding of analogue wires → section 0

| | Information |
|--|--------------------|
| <p>Module 694 443 57 Kuhnke FIO AI4-Pt/Ni/TC is the INCOMPATIBLE successor to the following modules:</p> <ul style="list-style-type: none"> 694 443 01 Ventura FIO AI4-Pt/Ni100 694 443 03 Ventura FIO AI4-Pt/Ni1000 694 443 05 Ventura FIO AI4-TE <p>The module complies with ETG guidelines.</p> <p>Before replacing a Ventura FIO AI4-Pt/Ni100 or 694 443 03 Ventura FIO AI4-Pt/Ni1000 or 694 443 05 Ventura FIO AI4-TE (694 443 01) with a Kuhnke FIO AI4-Pt/Ni/TC module (694 443 57), you must modify the EtherCAT master's control program.</p> | |

Status LEDs

LED "EtherCAT Run"

The LED labelled "EtherCAT Run" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|-------|----------------|-------------|
| Ok | Green, on | No error |

| State | LED flash code | Explanation |
|-----------|----------------|--|
| Error | Off | Malfunction of module if E-bus LED = On Inoperative if E-bus LED = Off |
| | Red, 4x | EtherCAT watchdog control |
| | Red, 7x | Configuration error (E-bus pre-operational), no. of process data differs from that in the module |
| Defective | Red, on | Module defective |

LEDs "Channel"

The "Channel" LEDs indicate the state of every channel.

| State | LED flash code | Explanation |
|-------|----------------|------------------|
| On | Green, on | Channel enabled |
| Off | Off | Channel disabled |
| Error | Red, 1x | Sensor low |
| | Red, 2x | Sensor high |

Note on Pt100/Ni100 mode

Error "input high" is not shown in the Pt100 and Ni100 modes, unless a temperature sensor is connected. Check that your wiring is correct (jumpered 2-wire or 3-wire connection) to ensure that all errors are detected/shown properly.

Note on thermocouple mode

- Errors *input low* and *input high* are just indicative of the temperature being out of the set range.
- A short circuit (*input low*) is not detected in thermocouple mode (types J,K) because the thermal voltage is too small for a short circuit to be relevant to the measured result.
- Since a broken wire is not detected, the floating module values may provoke an indication of error *input high* or *input low*.

Function

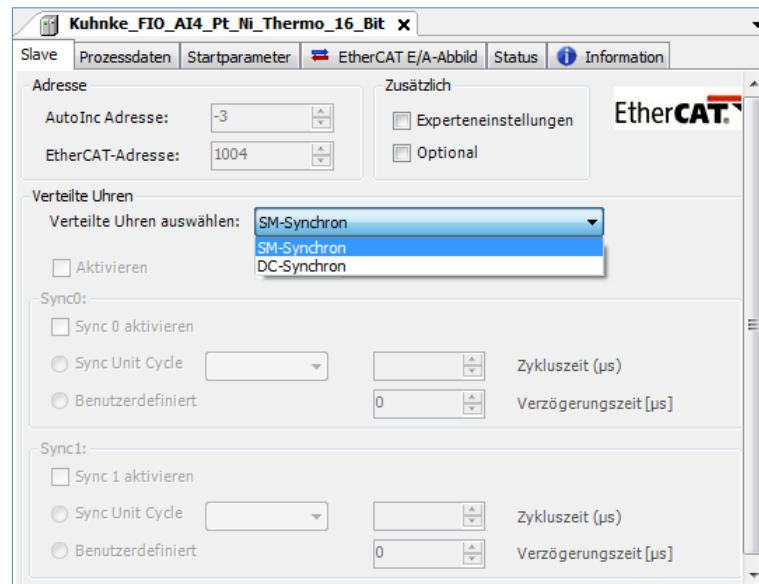

Module AI4-Pt/Ni/TC features four analogue inputs for temperature sensors. Every channel can be separately set to one of the following sensor types: millivolt, Pt100, Pt1000, Ni100, Ni1000 (DIN 43760) or thermocouple.

Measured value

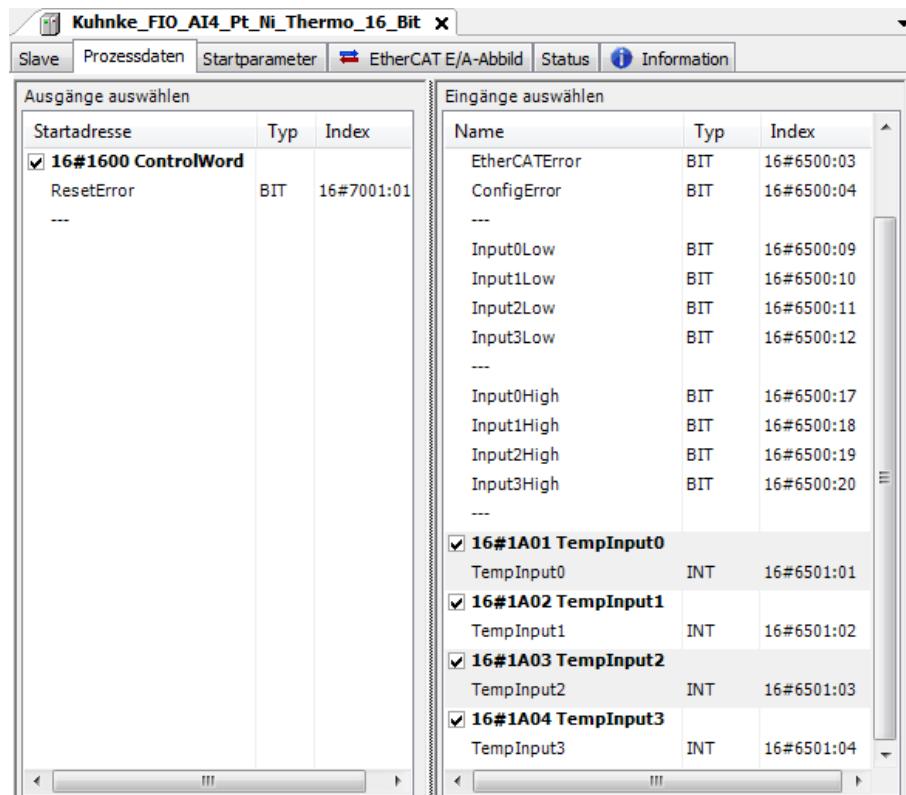

Readings are shown in 0.1 °C steps (default). Alternatively, you can choose to show them as Ohm/Volt or raw data.

To Set up the Options

Conversion of the analogue values can be synchronised with DC (Distributed Clocks) or SM (Sync Manager).

The process data objects stored as variables in the EtherCAT master's control program are used to access the input values and the module state.

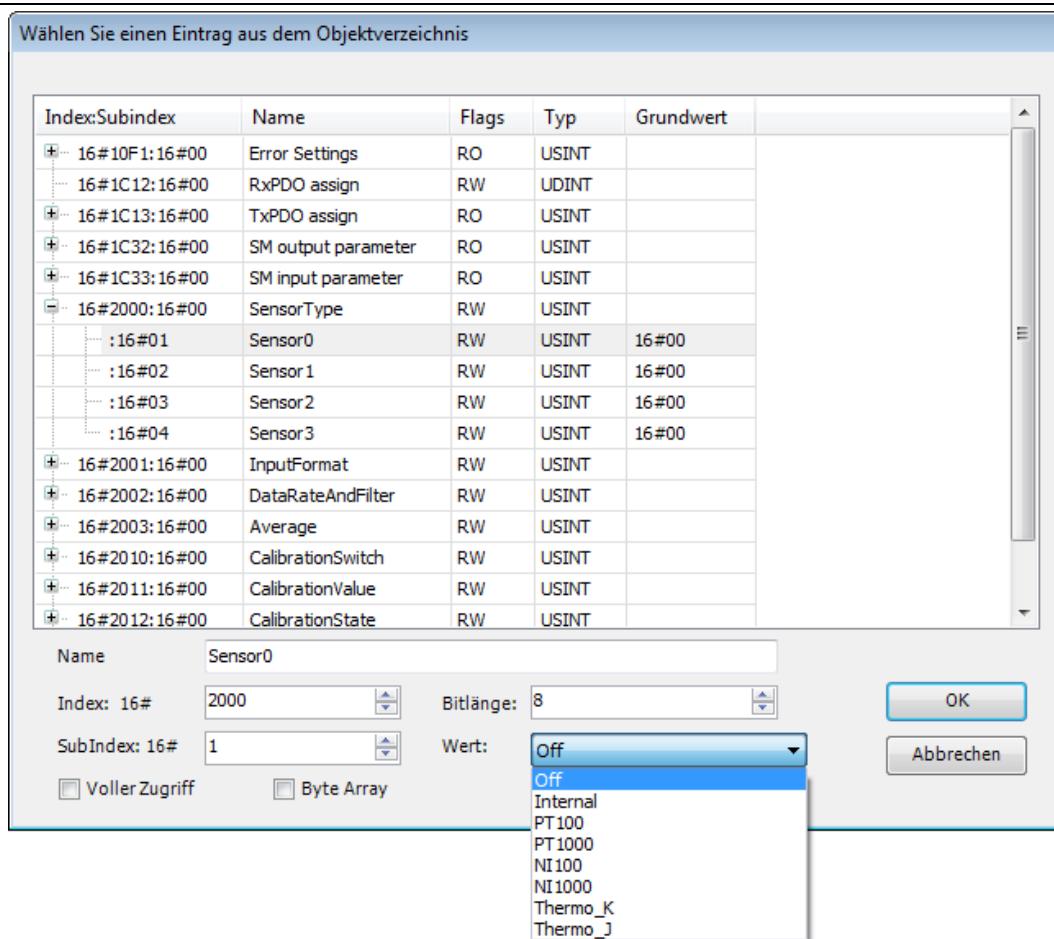

Service data objects (SDO) are available for details and settings.

You may run the configuration tool offline and choose the "Startup Parameters" to change some settings of module AI4-Pt/Ni/TC (such as the properties of each of the inputs). The EtherCAT master will apply the settings when starting up the module.

You can also use the SDO transfer components available for the EtherCAT master to change settings at runtime.

Click/tap on "Add...", choose an object, and set the appropriate value.

Options

You can set up the following options for every channel:

| Name | Value | Explanation |
|----------------------|-------|---|
| SensorType | 0 | Off (default) |
| | 1 | Internal (Cold junction) |
| | 2 | Pt100 |
| | 3 | Pt1000 |
| | 4 | Ni100 |
| | 5 | Ni1000 (DIN43760) |
| | 6 | Thermo K |
| | 7 | Thermo J |
| InputFormat | 0 | 0.1°C |
| | 1 | Ω / V |
| | 2 | Raw (raw data) |
| Data rate and filter | 0 | 1000 readings per second |
| | 1 | 600 readings per second |
| | 2 | 330 readings per second |
| | 3 | 175 readings per second |
| | 4 | 90 readings per second |
| | 5 | 45 readings per second |
| | 6 | 20 readings per second |
| | 7 | 20 readings per second plus 50 & 60 Hz filter |
| | 8 | 20 readings per second plus 50 Hz filter |

| Name | Value | Explanation |
|---------|----------|--|
| | 9 | 20 readings per second plus +60 Hz filter |
| Average | n=1..255 | Inputn= average after n cycles (default=1) |

StateWord

The state word (DWORD) is indicative of the module state:

| Bit | Name | Explanation |
|-------|---------------|---|
| 0 | ResetErrorAck | Acknowledges "Reset Error" in Module Control |
| 1 | - | not used |
| 2 | EtherCATError | Sync Manager Watchdog |
| 3 | ConfigError | Mismatch of Sync Manager's quantity structure |
| 4-7 | - | not used |
| 8 | Input0low | Incorrect range of connected reading |
| 9 | Input1low | Incorrect range of connected reading |
| 10 | Input2low | Incorrect range of connected reading |
| 11 | Input3low | Incorrect range of connected reading |
| 12-15 | - | not used |
| 16 | Input0high | Incorrect range of connected reading |
| 17 | Input1high | Incorrect range of connected reading |
| 18 | Input2high | Incorrect range of connected reading |
| 19 | Input3high | Incorrect range of connected reading |
| 20-31 | - | not used |

Analogue Inputs

Check the following variables for the digitised input values:

| Variable | Data type | Explanation |
|-------------|-----------|---|
| TemplInputn | INT | Value of channel n (n=0...3) in 0.1°C, Ω or 2µV |

ControlWord

The control word contains a bit for acknowledging errors.

| Bit | Name | Explanation |
|------|------------|--|
| 0 | ResetError | 0 -> errors are retained, 1 -> errors cleared after removing their cause |
| 1-15 | - | not used |

Cold Point Compensation

Cold points are automatically compensated if thermocouples are used. Temperature readings are taken immediately at the plug near the connection

Calibration

This module need not be calibrated by the end user because it is calibrated after fabrication.

It can only be calibrated once because the calibration values are kept on memory.

The calibration objects (2010:n; 2011:n and 2012:n) in the Startup Parameters are intended for internal use only.

Technical Data

| | |
|-------------------------------------|---|
| Analogue inputs | 4 |
| Resolution..... | 16 bit |
| Input filter cutoff frequency | typ. 0.33 Hz |
| Conversion time..... | 50 ms (adjustable) |
| Measuring error | <±0.54% (of final measuring range value) |
| Temperatur drift | <±50 ppm (of final measuring range value) |

Thermocouple

| | |
|-------------------------------|--------------------------------|
| Sensor types..... | J, K, Internal (Cold junction) |
| Cold point compensation | Yes |
| Measuring range Type K | -200°C...+1372°C |
| Measuring range Type J..... | -50°C...+760°C |
| Measuring range mV | -40 ... +65 mV |

Pt100 / Ni100

| | |
|--------------------------|----------------|
| Measuring range Pt | -75°C...+670°C |
| Measuring range Ni | -60°C...+250°C |
| Input resistance | 70...320Ω |
| Measuring current..... | 1mA (typ.) |

Pt1000 / Ni1000 DIN43760

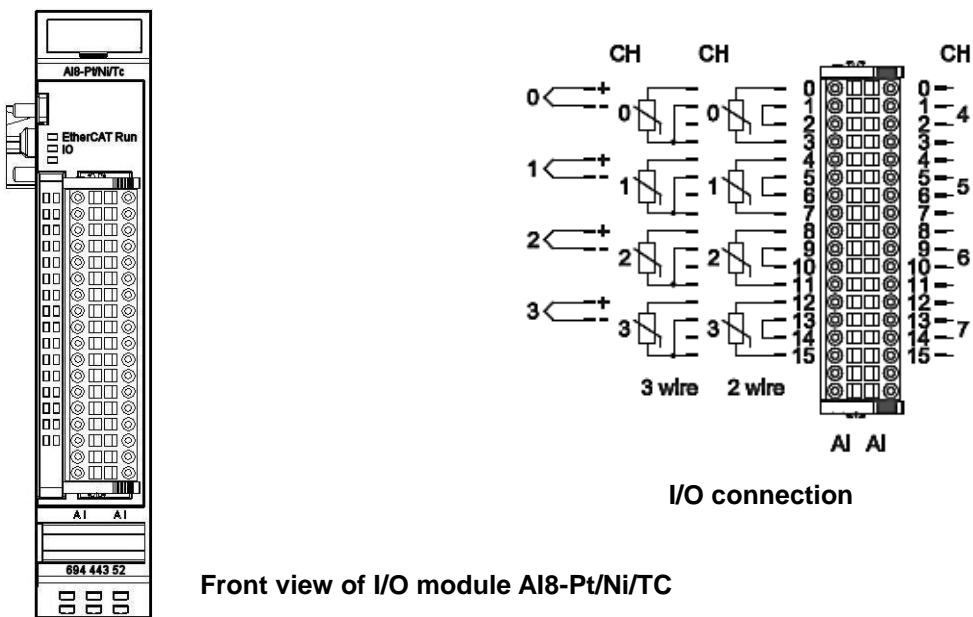

| | |
|--------------------------|----------------|
| Measuring range Pt | -75°C...+670°C |
| Measuring range Ni | -60°C...+250°C |
| Input resistance | 700...3200Ω |
| Measuring current..... | 0,1mA (typ.) |

| | |
|--------------------------|----------------------------------|
| Baud rate | 100 Mbit/s |
| Controller | ASIC ET1200 |
| E-bus connector | 10-pole system plug in side wall |
| Terminating module | not required |
| IO connection | 18-pin plug |
| Power supply | none |
| E-bus load..... | 170 mA |
| Part no. | 694.443.57 (CoE) |

Approval:.....

5.4.9 AI8-Pt/Ni/TC

Front view of I/O module AI8-Pt/Ni/TC

Terminals

The module needs no separate 24V connector. Power is supplied to the module through the E-bus connector.

Operative earth / shielding of analogue wires → section 0

| | |
|---|--------------------|
| | Information |
| <p>Module 694 443 58 Kuhnke FIO AI8-Pt/Ni/TC is the INCOMPATIBLE successor to the following modules:</p> | |
| <p>694 443 02 Ventura FIO AI8-Pt/Ni100 694 443 04 Ventura FIO AI8-Pt/Ni1000 694 443 06 Ventura FIO AI8-TE</p> | |
| <p>The module complies with ETG guidelines. Before replacing a Ventura FIO AI8-Pt/Ni100 (694 443 02) or Ventura FIO AI8-Pt/Ni1000 (694 443 04) or Ventura FIO AI8-TE (694 443 06) with a Kuhnke FIO AI8-Pt/Ni/TC module (694 443 58), you must modify the EtherCAT master's control program.</p> | |

Status LEDs

LED "EtherCAT Run"

The LED labelled "EtherCAT Run" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|-----------|----------------|--|
| Ok | Green, on | No error |
| Error | Off | Malfunction of module if E-bus LED = On |
| | | Inoperative if E-bus LED = Off |
| | Red, 4x | EtherCAT watchdog control |
| | Red, 7x | Configuration error (E-bus pre-operational), no. of process data differs from that in the module |
| Defective | Red, on | Module defective |

LEDs "Channel"

The "Channel" LEDs indicate the state of every channel.

| State | LED flash code | Explanation |
|-------|----------------|------------------|
| On | Green, on | Channel enabled |
| Off | Off | Channel disabled |
| Error | Red, 1x | Sensor low |
| | Red, 2x | Sensor high |

Note on Pt100/Ni100 mode

Error "input high" is not shown in the Pt100 and Ni100 modes, unless a temperature sensor is connected. Check that your wiring is correct (jumpered 2-wire or 3-wire connection) to ensure that all error are detected/shown properly.

Note on thermocouple mode

- Errors *input low* and *input high* are just indicative of the temperature being out of the set range.
- A short circuit (*input low*) is not detected in thermocouple mode (types J,K) because the thermal voltage is too small for a short circuit to be relevant to the measured result.
- Since a broken wire is not detected, the floating module values may provoke an indication of error *input high* or *input low*.

Function

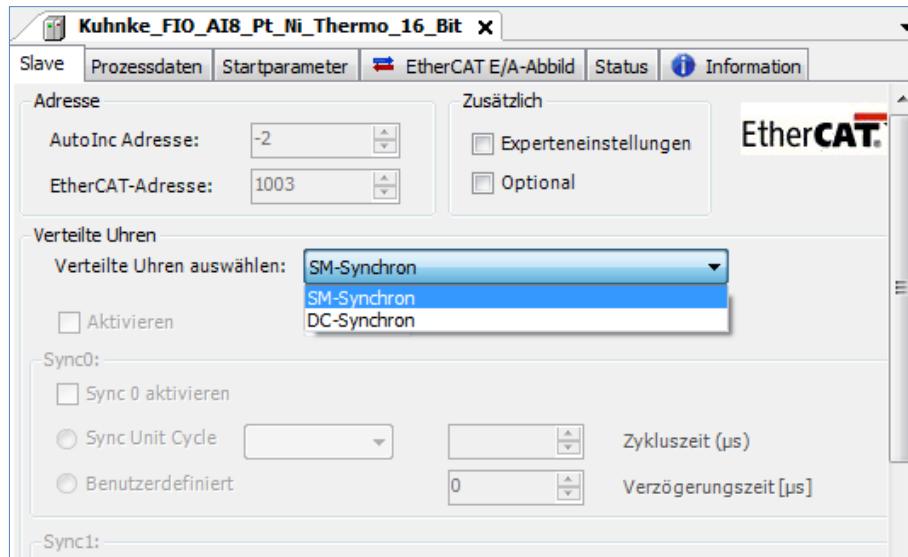

The AI8-I module has eight analogue temperature sensor inputs. Every channel can be separately set to one of the following sensor types: millivolt, Pt100, Pt1000, Ni100, Ni1000 (DIN 43760) or thermocouple.

Measured value

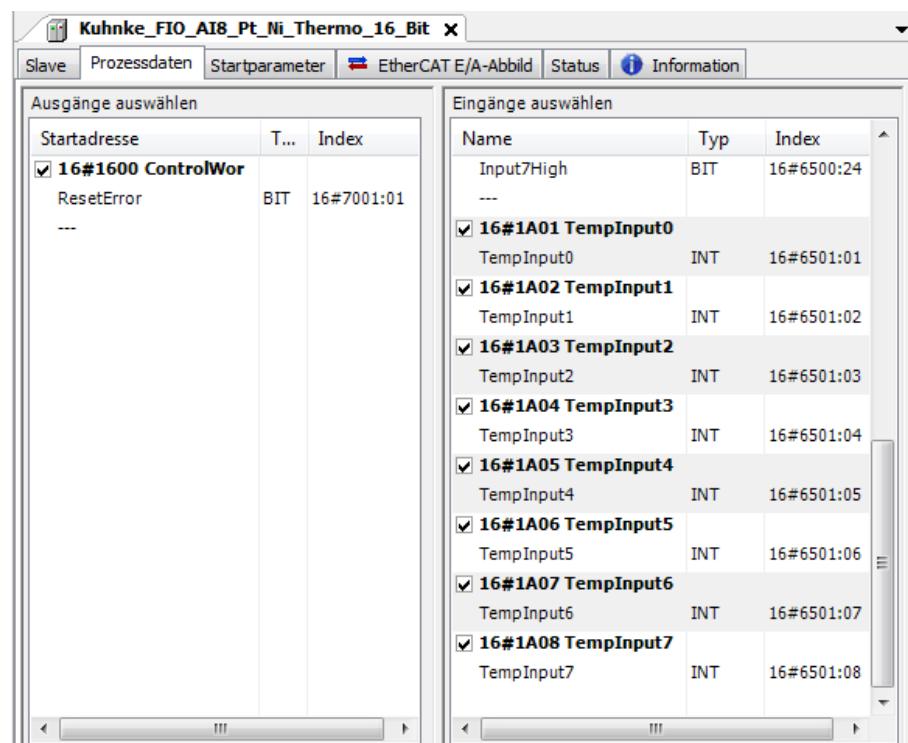

Readings are shown in 0.1 °C steps (default). Alternatively, you can choose to show them as Ohm/Volt or raw data.

To Set up the Options

Conversion of the analogue values can be synchronised with DC (Distributed Clocks) or SM (Sync Manager).

The process data objects stored as variables in the EtherCAT master's control program are used to access the input values and the module state.

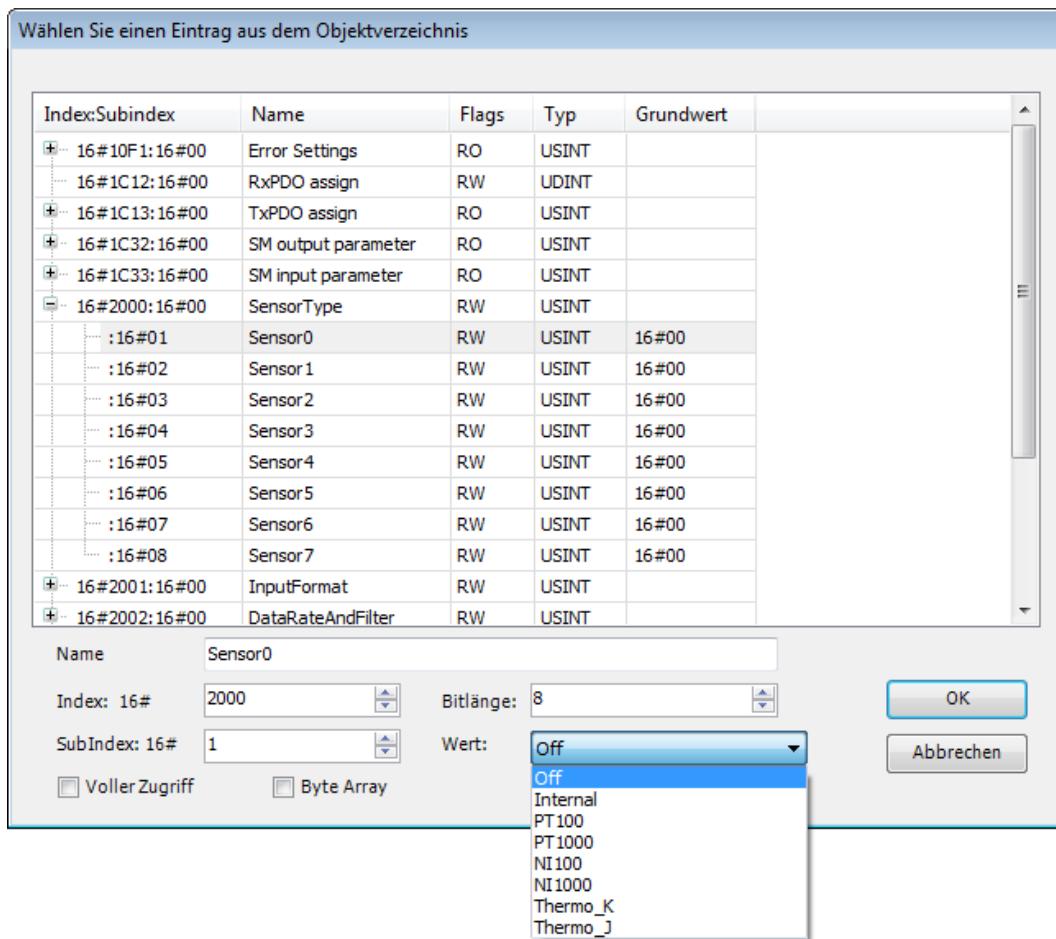

Service data objects (SDO) are available for details and settings.

You may run the configuration tool offline and choose the "Startup Parameters" to change some settings of module AI8-Pt/Ni/TC (such as the properties of each of the inputs). The EtherCAT master will apply the settings when starting up the module.

You can also use the SDO transfer components available for the EtherCAT master to change settings at runtime.

Click/tap on "Add...", choose an object, and set the appropriate value.

Options

You can set up the following options for every channel:

| Name | Value | Explanation |
|----------------------|-------|---|
| SensorType | 0 | Off (default) |
| | 1 | Internal (Cold junction) |
| | 2 | Pt100 |
| | 3 | Pt1000 |
| | 4 | Ni100 |
| | 5 | Ni1000 (DIN43760) |
| | 6 | Thermo K |
| | 7 | Thermo J |
| InputFormat | 0 | 0.1°C |
| Data rate and filter | 1 | Ω / V |
| | 2 | Raw (raw data) |
| | 0 | 1000 readings per second |
| Average | 1 | 600 readings per second |
| | 2 | 330 readings per second |
| | 3 | 175 readings per second |
| | 4 | 90 readings per second |
| | 5 | 45 readings per second |
| | 6 | 20 readings per second |
| | 7 | 20 readings per second plus 50 & 60 Hz filter |
| | 8 | 20 readings per second plus 50 Hz filter |

| Name | Value | Explanation |
|------|----------|--|
| | 9 | 20 readings per second plus +60 Hz filter |
| | n=1..255 | Inputn= average after n cycles (default=1) |

StateWord

The state word (DWORD) is indicative of the module state:

| Bit | Name | Explanation |
|-------|---------------|---|
| 0 | ResetErrorAck | Acknowledges "Reset Error" in Module Control |
| 1 | - | not used |
| 2 | EtherCATError | Sync Manager Watchdog |
| 3 | ConfigError | Mismatch of Sync Manager's quantity structure |
| 4-7 | - | not used |
| 8 | Input0low | Incorrect range of connected reading |
| 9 | Input1low | Incorrect range of connected reading |
| 10 | Input2low | Incorrect range of connected reading |
| 11 | Input3low | Incorrect range of connected reading |
| 12 | Input4low | Incorrect range of connected reading |
| 13 | Input5low | Incorrect range of connected reading |
| 14 | Input6low | Incorrect range of connected reading |
| 15 | Input7low | Incorrect range of connected reading |
| 16 | Input0high | Incorrect range of connected reading |
| 17 | Input1high | Incorrect range of connected reading |
| 18 | Input2high | Incorrect range of connected reading |
| 19 | Input3high | Incorrect range of connected reading |
| 20 | Input4high | Incorrect range of connected reading |
| 21 | Input5high | Incorrect range of connected reading |
| 22 | Input6high | Incorrect range of connected reading |
| 23 | Input7high | Incorrect range of connected reading |
| 24-31 | - | not used |

Analogue Inputs

Check the following variables for the digitised input values:

| Variable | Data type | Explanation |
|-------------|-----------|---|
| TemplInputn | INT | Value of channel n (n=0...7) in 0.1°C, Ω or 2µV |

ControlWord

The control word contains a bit for acknowledging errors.

| Bit | Name | Explanation |
|------|------------|--|
| 0 | ResetError | 0 -> errors are retained, 1 -> errors cleared after removing their cause |
| 1-15 | - | not used |

Cold Point Compensation

Cold points are automatically compensated if thermocouples are used. Temperature readings are taken immediately at the plug near the connection

Calibration

This module need not be calibrated by the end user because it is calibrated after fabrication.

It can only be calibrated once because the calibration values are kept on memory.

The calibration objects (2010:n; 2011:n and 2012:n) in the Startup Parameters are intended for internal use only.

Status LEDs

"EtherCAT" LED

The LED labelled "EtherCAT" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|-----------|----------------|--|
| Ok | Green, on | No error |
| Error | Off | Malfunction of module if E-bus LED = On Inoperative if E-bus LED = Off |
| | Red, 2x | Low voltage |
| | Red, 3x | Internal watchdog |
| | Red, 4x | EtherCAT watchdog control |
| | Red, 7x | Configuration error (E-bus pre-operational), no. of process data differs from that in the module |
| Defective | Red, on | Module defective |

LED "Power"

The LED labelled "Power" indicates the state of the I/O module's I/O power supply.

| State | LED flash code | Explanation |
|-------|----------------|----------------------|
| On | Green, on | 24 VDC supply ok |
| Off | Off | 24 VDC supply not ok |

Status LEDs of IOs

The status LEDs of the IOs are indicative of the state of each of the digital I/Os.

| Trm. | Voltage | LED | Explanation |
|----------|---------|-------|---------------------------------------|
| 0..3 | 24V | Green | Digital inputs |
| 4 | 24V | Green | Digital output |
| 7, 9, 11 | 5 V | Green | Incremental encoder signals A, B, Ref |

Function

Module Counter2 features 2 identical channels.

Every channel features ports for 1 incremental encoder, 4 digital inputs and 1 digital output.

Module Counter/Posi2 also has an extra analogue output.

The variables are put into groups.

1. To control and monitor the entire module:

- Module Control/Module State

2. To control and monitor counter 1 or 2:

- Options/Control/State/Error

3. Readings of counter 1 or 2:

- Set-points/Actual Values

4. State of the digital IOs of counter 1 or 2:

- Digital Outputs/Digital Inputs/Time Stamp of Input Edge/Output Delay

5. State of the analogue outputs of counter 1 or 2:

- Optional Analogue Outputs (function provided by module Counter/Posi2 only)

| + | WcState |

Control and State principle:

When a control bit turns (=TRUE), the rising edge makes the module run the associated function.

To indicate that the function is running, the module changes the associated status bit (=TRUE). When the control bit becomes (=FALSE) again, the module also resets the status bit to (=FALSE).

| | |
|---|--------------------|
|  | Information |
| <i>The text below describes the function of Counter/Posi 1. The information applies to Counter/Posi 2 also.</i> | |

Operation Synchronised with Frames or DC

The module runs in the appropriate mode, depending on whether Distributed Clocks (DC) is used or not.

By default, the module synchronises with frames. When the first DC frame is received, the module synchronises with DC mode and stays in this mode until it is switched off the next time.

Synchronised with Frames

The EtherCAT master sends EtherCAT frames containing the output data for the module. The module imports and processes the output data whenever it receives any of these frames. In return, the module exports its input data to the EtherCAT frame and sends the frame to the master.

Synchronised with DC

A module synchronised with DC will automatically generate DC interrupts according to the Distributed Clocks rules.

The EtherCAT master again sends EtherCAT frames containing the output data for the module. Whereas the module will again import the output data contained in that frame, it will not process the data until it encounters a DC interrupt. The module uses the DC interrupt to export its input data to a buffer from where it is picked up by the next EtherCAT frame sent to the master.

This method allows you to synchronise the times of the digital inputs and digital outputs of several modules in the same EtherCAT network.

Refer to page 217 and following, Counter 1 - Time Stamp of Input Edge and Output delay (underway).

To Control and Monitor the Entire Module

The module is controlled by the variables of group "Module Control". The state of the settings is contained in the variables of group "Module State".

Module Control

For the time being, this module has no global module options.

The module uses various "module state" bits to indicate errors. The states of these error bits are retained. They cannot be cleared until the error has been removed. To reset the error bits set control bit "ResetError" to a rising edge.

| Variable | Data type | Explanation |
|------------|-----------|----------------------------------|
| ResetError | BOOL | Rising edge → acknowledges error |

Module State

The following module states are indicated:

| Variable | Data type | Explanation |
|------------------|-----------|---|
| LowSupplyVoltage | BOOL | Low voltage |
| Watchdog | BOOL | Internal watchdog of module |
| EtherCAT_Error | BOOL | Configuration error or watchdog control |

Acknowledgement: see Module Control

Control/Monitoring of Counter 1

The counter properties are set by the variables of group "Counter 1 Options".

The module is controlled by the variables of group "Counter 1 Control".

The state of the settings is contained in the variables of group "Counter 1 State".

Information

The variables of groups Counter 1 Options / Control / Status let you use the counter module for almost any kind of task.

Counter 1 Options

The module provides you with various options of how to operate Counter 1. The module uses control bit "SetOptions_1" (refer to Counter 1 Control) to set the options which are retained until the settings are changed the next time.

- To set up the module choose the options as appropriate and accept by setting control bit "SetOptions_1" to a rising edge. The module will confirm by returning "OptionsSet_1=TRUE". When "SetOptions_1" becomes FALSE, the module responds by sending "OptionsSet_1=FALSE" to indicate that it is ready for the next setup cycle.

| Variable | Data type | Value | Explanation | |
|---|-----------|-------|--|--|
| Enable_Compare_1 | BOOL | 0 | Disables the reference value function | |
| | | 1 | Enables the reference value function | |
| SelectEncoder_1 | BOOL | 0 | A, B, Ref and detection of direction | |
| | | 1 | Event counter at A B=0 down B=1 up | |
| | | | If SelectEncoder=1 only (event counter) | |
| SetResolution_1 | BOOL | 0 | Rising and falling edges | |
| | | 1 | Rising edges only | |
| ControlOutput_1 | BOOL | 0 | Output_0_0 is a digital output | |
| | | 1 | Reference value function controls Output_0_0. | |
| OnErrorHandlerOutputsOff_1 (Release 3 or higher) | BOOL | 0 | All digital and analogue outputs keep refreshing after a module error. | |
| | | 1 | All digital and analogue outputs turn 0 after a module error. | |

Counter 1 Control

The state of the control variables controls when and how counters and references are enabled or disabled.

Set the appropriate variable to start the set and reset functions.

The associated status variable indicates that a function is running.

After a reset of the control variable, the counter module also resets the associated status variable.

| Variable | Data type | Value | Explanation |
|---------------------|-----------|-------|--------------------------------------|
| SetOptions_1 | BOOL | 0/1 | Accepts Counter 1 Options |
| ResetReferenced_1 | BOOL | 0/1 | Resets status bit "Referenced_1" |
| ResetCompared_1 | BOOL | 0/1 | Resets status bit "Compared_1" |
| ResetCaptured_1 | BOOL | 0/1 | Resets status bit "Captured_1" |
| EnableCounter_1 | BOOL | 0 | Counter disabled |
| | | 1 | Counter enabled |
| EnableReferencing_1 | BOOL | 0 | Referencing disabled |
| | | 1 | Referencing enabled |
| SetCounter_1 | BOOL | 0/1 | Sets the counter to the preset value |
| SetCompare_1 | BOOL | 0/1 | Sets the reference value |
| SetPreset_1 | BOOL | 0/1 | Sets the preset value |
| SetMax_1 | BOOL | 0/1 | Sets the final counter value |

Counter 1 State

The status variables indicate the state of the counter. This applies to

- events and
- notifications that settings are being applied.

| Variable | Data type | Explanation |
|---------------------|-----------|--|
| Counting_1 | BOOL | Counter enabled |
| Referenced_1 | BOOL | Reference function has been run. Use ResetReferenced_1 to reset |
| Clockwise_1 | BOOL | Up-counting |
| Compared_1 | BOOL | Reference value function has been run. Use ResetCompared_1 to reset |
| Captured_1 | BOOL | Capture function has been run. Use ResetCaptured_1 to reset |
| CounterSet_1 | BOOL | Counter set to preset value |
| CompareSet_1 | BOOL | Reference value has been set |
| PresetSet_1 | BOOL | Preset value has been set |
| MaxSet_1 | BOOL | Final counter value has been set |
| OptionsSet_1 | BOOL | Counter 1 options accepted |
| OutputsOnErrorOff_1 | BOOL | Error switches off the outputs (release 3 or higher) |

Counter 1 Error

Use these variables to indicate error states.

| Variable | Data type | Explanation |
|--------------------|-----------|---|
| OutputsForcedOff_1 | BOOL | Outputs set to 0 after a module error auf 0 (release 3 or higher) |
| Err_Reserve_1_x | BOOL | Reserved error bits |

Readings of Counter 1

Counter 1 Set-points

The counter can be preset to various set-points. Use variable "SetValue_1" and the following control bits of group "Counter 1 Control" to transfer the value of the variable to the relevant registers.

| Variable | Explanation |
|--------------|--|
| SetCounter_1 | Accepts value as actual counter reading |
| SetCompare_1 | Accepts value as the reference value |
| SetPreset_1 | Accepts value as the preset value |
| SetMax_1 | Accepts value as the final counter value |

- Check variable "SelectedValue" to find the actual counter readings currently used as presets.
- Use variable "Select_1" to choose the value you wish to see in variable "SelectedValue".

| Variable | Data type | Explanation |
|------------|-----------|--|
| Select_1 | USINT | Selects the value of Counter1 to be shown in variable "SelectedValue". |
| | | 0 None |
| | | 1 Reference value (Compare) |
| | | 2 Preset value (Preset) |
| | | 3 Final value (Max) (default: 2.147.483.647) |
| | | 4 Captured value (Capture) |
| | | 5 Counting pulses per second |
| | | 6 Revolutions per minute |
| SetValue_1 | UDINT | 128 Version info |
| | | Set-point of Counter1 to be transferred by a control bit |

Counter 1 Actual Values

These variables indicate the actual counter value and the current presets. Variable "SelectedValue" multiplexes (use Select_1 to select) and shows the presets.

| Variable | Data type | Explanation |
|---------------|-----------|---|
| Counter_1 | UDINT | Actual value of Counter1 |
| Selected_1 | USINT | Selects the value of Counter1 to be shown in variable SelectedValue. (Value retrieved from Select_1) |
| | | 0 None |
| | | 1 Reference value (Compare) |
| | | 2 Preset value (Preset) |
| | | 3 Final value (Max) |
| | | 4 Captured value (Capture) |
| | | 5 Counting pulses per second |
| | | 6 Revolutions per minute |
| SelectedValue | UDINT | 128 Version info |
| | | Counter1 value currently selected |

Version info:

| Byte | 3 | 2 | 1 | 0 |
|-------------|-----------|---------|-------|-----------|
| Explanation | Version # | Release | Level | Type code |
| Example | 0x2 | 0x00 | 0x00 | 0x53 |
| | 2 | 0 | 0 | S |

Digital I/Os

Counter 1 - Digital Inputs

These variables indicate the state of the digital inputs.

| Variable | Data type | Explanation |
|---------------|-----------|----------------------------------|
| Input_0_0 | BOOL | Digital input 0 |
| Input_0_1 | BOOL | Digital input 1 |
| Input_0_2 | BOOL | Digital input 2 |
| Input_0_3 | BOOL | Digital input 3 |
| In_Output_0_0 | BOOL | Digital output 0 value retrieved |

Counter 1 - Time Stamp of Input Edge

These variables indicate the time at which the state of the digital inputs changed. The current mode defines the point at which measuring the time starts.

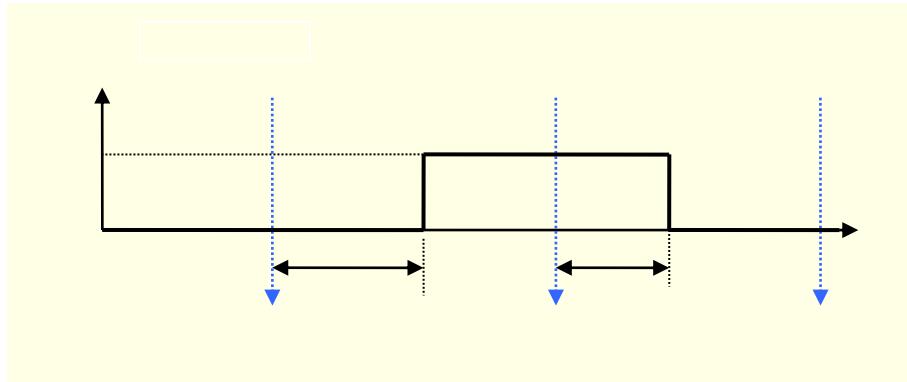

(Refer to section Operation Synchronised with Frames or DC on page 212)

| Variable | Data type | Explanation |
|--------------|-----------|--|
| Input_0_0_TS | UINT | Time stamp of digital input 0 (hardware trigger) |
| Input_0_1_TS | UINT | Time stamp of digital input 1 (software polling) |
| Input_0_2_TS | UINT | Time stamp of digital input 2 (software polling) |
| Input_0_3_TS | UINT | Time stamp of digital input 3 (software polling) |

| | |
|--|--------------------|
|  | Information |
| <i>The time stamp is measured in μs between the frame or DC interrupt and the change of input signal. The time stamp value turns 0xFFFF if the signal does not change between two frame or DC interrupts.</i> | |

If synchronised with frames:

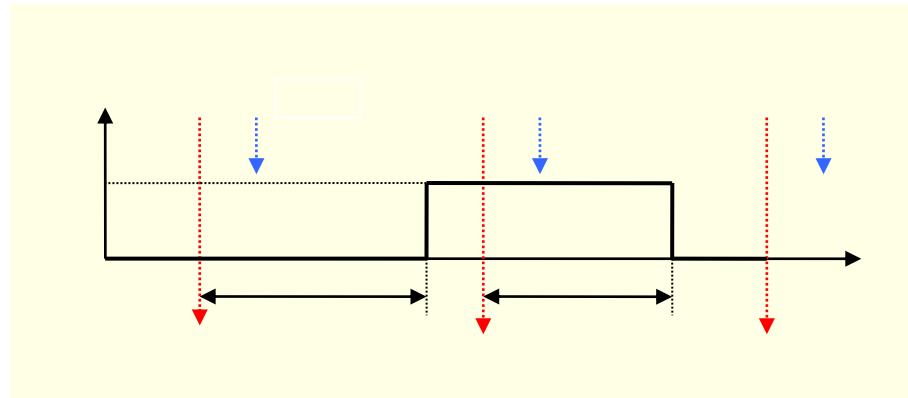

The time stamp saves the time between the last frame interrupt and the change of input state and sends that time to the EtherCAT master with the next frame.

| Frame | Digital Input | |
|-------|---------------|------------------|
| | Variable | Time stamp |
| n+1 | TRUE | Time stamp (n) |
| n+2 | FALSE | Time stamp (n+1) |

If synchronised with DC:

The time stamp saves the time between the last DC interrupt and the change of input state and sends that time to the EtherCAT master with the next frame.

| Frame | Digital Input | |
|-------|---------------|------------------|
| | Variable | Time stamp |
| n+1 | TRUE | Time stamp (n) |
| n+2 | FALSE | Time stamp (n+1) |

Digital Outputs

The variables define the state of the digital outputs.

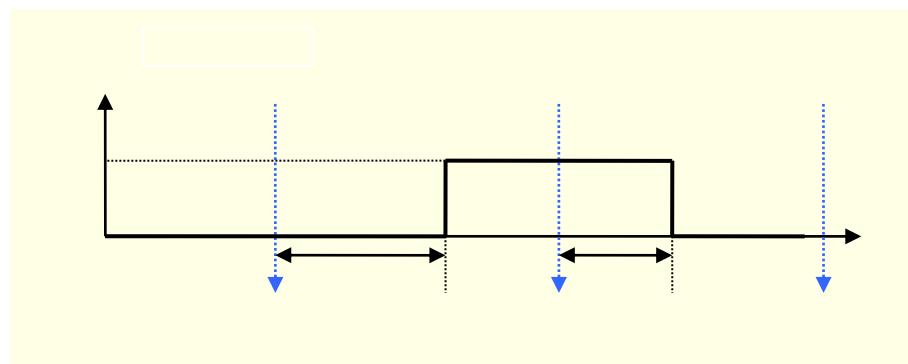

| Variable | Data type | Explanation |
|------------|-----------|------------------|
| Output_0_0 | BOOL | Digital output 0 |

Output delay (underway)

This variable defines the time at which the output is set.

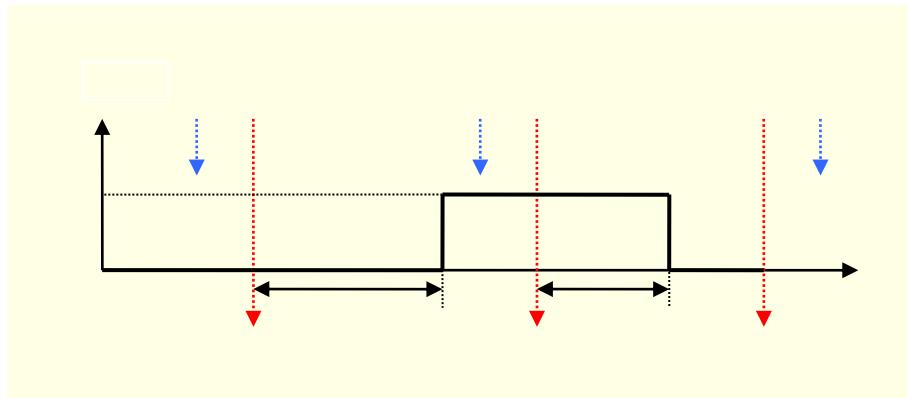

| Variable | Data type | Explanation |
|----------------|-----------|--------------------------|
| Output_0_0_Del | UINT | Output delay, in μ s |

If synchronised with frames:

| Frame | Digital Output | |
|-------|----------------|--------------------|
| | Variable | Output delay |
| n | TRUE | Output delay (n) |
| n+1 | FALSE | Output delay (n+1) |

If synchronised with DC:

| Frame | Digital Output | |
|-------|----------------|--------------------|
| | Variable | Output delay |
| n | TRUE | Output delay (n) |
| n+1 | FALSE | Output delay (n+1) |

Analogue Outputs (Counter/Posi2.5V only)

These variables define the voltage reading of the analogue outputs.

| Variable | Data type | Explanation |
|----------------|-----------|-------------------|
| AnalogOutput_1 | UINT | Analogue output 1 |

Table "Voltage output values"

| Voltage [V] | Hex value | Decimal value |
|-------------|-----------|---------------|
| -10 | 0x8000 | -32768 |
| -5 | 0xC000 | -16384 |
| 0 | 0x0 | 0 |
| 5 | 0x3FFF | 16384 |
| 10 | 0x7FFF | 32767 |

Examples

Enable Counter

The counter remains enabled for as long as variable "EnableCounter_1" is TRUE.

| | |
|------------------------------|------------------------------------|
| Term2_EnableCounter_1:=TRUE; | (*Enables the counter*) |
| Term2_Counting_1; | (*TRUE if the counter is enabled*) |
| Term2_Clockwise_1; | (*TRUE if counting up*) |

Set / Clear Counter

A rising edge of "SetCounter_1" accepts the value of "SetValue_1" as the actual counter value.
"CounterSet_1=TRUE" indicates that the function is running.

Returning "SetCounter_1" to FALSE also returns "CounterSet_1" to FALSE.

| | |
|------------------------------------|--|
| Term2_SetValue_1:=diCounterValue ; | (*Write value to register*) |
| | (* 0 = clear*) |
| Term2_SetCounter_1:=TRUE; | (*and accept as actual counter value*) |
| Term2_CounterSet_1; | (*TRUE when accepted*) |

Set Reference Value

A rising edge of control bit "SetOptions_1" accepts the configuration settings set in "Counter 1 Options".
Status bit "OptionsSet_1" confirms that the settings have been accepted.

Example: set up the reference value function.

PROGRAM Initialise

VAR

```
bInit: BOOL := TRUE ;
Step: USINT;
```

END_VAR

IF bInit THEN

CASE Step OF

(*Choose options and accept with rising edge of "Set_Options")

| | |
|----|---|
| 0: | Term2_EnableCounter_1:=TRUE; (*Enable counter*) |
| | Term2_EnableCompare_1:=TRUE; (*Enable reference function*) |
| | Term2_ControlOutput_1:=TRUE; (*Reference function sets output*) |
| | Term2_SetValue_1:=10000; (*Value set = 10000..*) |
| | Term2_SetCompare_1:=TRUE; (*.is used as reference value*) |
| | Term2_SetOptions_1:=TRUE; (*Accept*) |
| | Step:= 1; |

(*Wait until accepting "OptionsSet" and "CompareSet" has been confirmed*)

| | |
|----|---|
| 1: | IF Term2_OptionsSet_1 AND Term2_CompareSet_1 THEN |
| | Step:= 2; |

END_IF

(*Reset "Set_Options" and " SetCompare" to default*)

| | |
|----|----------------------------|
| 2: | Term2_SetOptions_1:=FALSE; |
| | Term2_SetCompare_1:=FALSE; |
| | Step:=0; |
| | bInit:=FALSE; |

END_CASE

END_IF

Set Preset Value

A rising edge of "SetPreset_1" accepts the value of "SetValue_1" as the preset value. "PresetSet_1=TRUE" indicates that the function is running.

Returning "SetPreset_1" to FALSE also returns "PresetSet_1" to FALSE.

```
Term2_SetValue_1:=diPresetValue ; (*Write value to register*)
Term2_SetPreset_1:=TRUE;          (*and accept as preset value*)
Term2_PresetSet_1;               (*TRUE when accepted*)
```

Set Maximum Value

A rising edge of "SetMax_1" accepts the value of "SetValue_1" as the final counter value. "MaxSet_1=TRUE" indicates that the function is running.

Returning "SetMax_1" to FALSE also returns "MaxSet_1" to FALSE.

```
Term2_SetValue_1:=di.MaxValue ;   (*Write value to register*)
Term2_SetMax_1:=TRUE;            (*and accept as final counter value*)
Term2_MaxSet_1;                 (*TRUE when accepted*)
```

Digital Output

Refer to page 214: Counter 1 Options.

The output can be optionally controlled by variable "Output_0_0" or the reference value function. Use variable "ControlOutput_1" to decide.

(Refer to page 220 to know how to set options)

The state of the output is retrieved from the module and shown in "In_Output_0_0".

```
Term2_ControlOutput_1:=FALSE;    (*Term2_Output_0_0 sets output*)
Term2_ControlOutput_1:=TRUE;     (*Reference function sets output*)
Term2_In_Output_0_0;             (*State of output*)
```

A-B-Ref or Event Counter

(Refer to page 214: Counter 1 Options)

You may use the counter as A, B, Ref counter with detection of direction or as event counter. Use variable "ControlOutput_1" to decide.

(Refer to page 220 to know how to set options)

```
Term2_SelectEncoder_1:=FALSE;    (*A, B, Ref and detection of direction*)
Term2_SelectEncoder_1:=TRUE;      (*Event counter at A*)
                                (*B=FALSE:down, B=TRUE:up*)
```

Single and Multi-counting

The option applies to event counter mode only

(Refer to page 214: Counter 1 Options)

You can set the counter to count (all rising and falling) edges or (rising edges only) pulses. Use variable "SetResolution_1" to decide.

(Refer to page 220 to know how to set options)

```
Term2_SetResolution_1:=FALSE;     (*All edges*)
Term2_SetResolution_1:=TRUE;       (*Pulses*)
```

Referencing

You can set the counter to a preset value when a pulse occurs at the Ref input. The preset value can be 0 or any other 32-bit value.

Task:

A 500-pulse rotary encoder running in 4-fold mode outputs 2000 increments per revolution.

Every Ref signal is to set the counter to the preset value (2000). The counter is to count down to 0 within one encoder revolution.

(The incremental encoder's sense of rotation sets the counting direction.)

PROGRAM Referencing

VAR

```
bInit: BOOL := TRUE ;
StepInit: USINT;
bInitReady: BOOL;
Step: USINT;
```

END_VAR

(*1. Initialising: enable counter and set preset value*)

IF bInit THEN

CASE StepInit OF

(*Choose options and accept with rising edge of "Set_Options")

```
0:    Term2_EnableCounter_1:=TRUE;
      Term2_SetValue_1:=2000;
      Term2_SetPreset_1:=TRUE;
      Term2_SetOptions_1:=TRUE;
      StepInit:=1;
```

(*Wait until accepting "OptionsSet" and "PresetSet" has been confirmed*)

```
1:    IF Term2_OptionsSet_1 AND Term2_PresetSet_1 THEN
          StepInit:=2;
      END_IF
```

(*Reset "Set_Options" and " Set_Preset" to default*)

```
2:    Term2_SetOptions_1:=FALSE;
      Term2_SetPreset_1:=FALSE;
      StepInit:=0;
      bInit:=FALSE;
      bInitReady:=TRUE;
```

END_CASE

END_IF

(*2. Control referencing*)

IF bInitReady THEN

CASE Step OF

(*Enable referencing*)

```
0:    Term2_EnableReferencing_1:=TRUE;
      Step:=1;
```

(*Wait for Referencing*)

```
1:    IF Term2_Referenced_1 THEN
          Step:=2;
      END_IF
```

(*Reset referencing message*)

```
2:    Term2_ResetReferenced_1:=TRUE;
      Step:=3;
```

```
3:    IF NOT Term2_Referenced_1 THEN
```

(*Terminate reset of referencing message*)

```
      Term2_ResetReferenced_1:=FALSE;
```

(*Disable referencing*)

```

Term2_EnableReferencing_1:=FALSE;
Step:=0;          (*Restart referencing at next revolution.*)
END_IF
END_CASE
END_IF

```

Capture Mode (Capture)

A falling edge of digital input 1 can be used to trigger writing the current counter reading. Status bit "Captured_1" indicates the capture event. Use "ResetCaptured_1" to reset and enable "Captured_1" to indicate the next capture event.

| | |
|------------------------|---|
| Term2_Input_0_1; | (*State of input 1*) |
| Term2_Select_1:=4; | (*Show captured value in Term2_SelectedValue_1*) |
| Term2_Selected_1; | (* =4 when captured value is in Term2_SelectedValue_1*) |
| Term2_SelectedValue_1; | (*Use to read the captured value*) |
| Term2_Captured_1; | (*A capture event has occurred*) |
| Term2_ResetCaptured_1; | (*Reset Term2_Captured_1*) |

Digital Inputs (Input_0_x)

Use variable "Input_0_x" to poll the state of the digital inputs.

Permanent extra function:

Upon a falling edge of input one the current counter reading is written to the capture register.

| | |
|------------------|----------------------|
| Term2_Input_0_0; | (*State of input 0*) |
| Term2_Input_0_1; | (*State of input 1*) |
| Term2_Input_0_2; | (*State of input 2*) |
| Term2_Input_0_3; | (*State of input 3*) |

Analogue Outputs (Counter/Posi2.5V only)

Variables "AnalogOutput_x" contain the output values of the analogue outputs.

| | |
|---------------------------------|--------------------------------------|
| Term2_AnalogOutput_1:= 16#7FFF; | (*Output +10V to analogue output 1*) |
| Term2_AnalogOutput_2:= 16#8000; | (*Output -10V to analogue output 2*) |

Output values: See section Analogue Outputs (Counter/Posi2.5V only)

Status LEDs

"EtherCAT" LED

The LED labelled "EtherCAT" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|-----------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | green, | Operational, unrestricted data exchange |
| Bootstrap | Flickering | Optional if bootstrap mode is supported |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|-----------|----------------|--|
| Ok | Green, on | No error |
| Error | Off | Malfunction of module if E-bus LED = On |
| | | Inoperative if E-bus LED = Off |
| | Red, 2x | Low voltage |
| | Red, 3x | Internal watchdog |
| | Red, 4x | EtherCAT watchdog control |
| | Red, 7x | Configuration error (E-bus pre-operational), no. of process data differs from that in the module |
| Defective | Red, on | Module defective |

LED "Power"

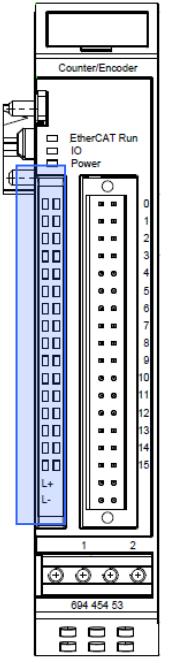

The LED labelled "Power" indicates the state of the I/O module's I/O power supply.

| State | LED flash code | Explanation |
|-------|----------------|----------------------|
| On | Green, on | 24 VDC supply ok |
| Off | Off | 24 VDC supply not ok |

Status LEDs of IOs

The status LEDs of the IOs are indicative of the state of each of the digital I/Os.

Function

The Kuhnke FIO MIX 04 module has 4 analogue inputs for recording current or voltage values and 4 analogue outputs for outputting analogue current or voltage values.

Furthermore the Kuhnke FIO Mix 04 module has 2 counter / encoder interfaces for the connection of incremental encoders or absolute value position encoders with SSI or EnDat interface. The interface can also be configured as event counter, so that 6 independent event counters are available.

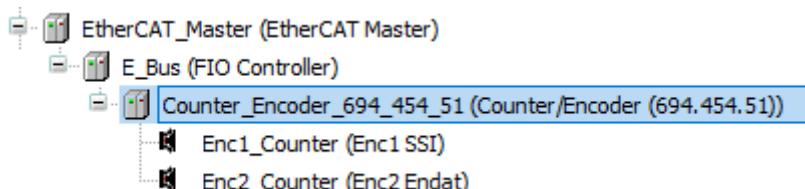

All channels can be parameterized almost independently of each other, which gives the module a high degree of flexibility.

Module configuration

The configuration of the counter/encoder interfaces is done via pluggable modules that are inserted into the corresponding slots. One slot corresponds to one counter/encoder interface. Only suitable modules can be plugged into the selected slot. This procedure is based on the "EtherCAT Modular Device Profile".

| | |
|---|--------------------|
|  | Information |
| <i>All slots must be equipped with a module.</i> | |

View CODESYS- device tree

Configuration - Overview of pluggable modules

| Slot | Slot name | Function | Module code | Module function |
|------|-----------|-----------|-------------|-------------------|
| 1 | Enc1 | Encoder 1 | 192361013 | Enc1 Counter |
| | | | 192361014 | Enc1 SSI |
| | | | 192361015 | Enc1 EnDat |
| | | | 192361016 | Enc event counter |
| 2 | Enc2 | Encoder 2 | 192361017 | Enc2 Counter |
| | | | 192361018 | Enc2 SSI |
| | | | 192361019 | Enc2 EnDat |
| | | | 192361020 | Enc event counter |

Encoder interface

The universal encoder interface offers a wide range of possibilities for the acquisition of angles, positions and pulses to be counted.

The following encoders can be connected:

- Inkremental encoder with RS422 interface (RS422)
- Inkremental encoder with 5V single ended interface (TTL)
- Inkremental encoder with 24V single ended interface (HTL)
- SSI- Encoder
- EnDat 2.1 single turn encoder
- EnDat 2.1 multi turn encoder

These encoders can be mixed as required. The module also provides the supply voltage for 5V encoders with a maximum of 150mA per encoder. This is monitored and an error is signalled if it is exceeded.

The encoder interface can also be used as an event counter and record 6 fast signals. In this case no encoder can be connected.

In the following chapters you will find an overview of the configuration options with the associated objects. These are linked to the object directory.

Encoder interface configuration – Incremental encoder

Object overview

| Slot | Object | Explanation |
|------|---|---|
| Enc1 | 0x2100 Enc1 Digital Interface Type | 64 Encoder (is assigned automatically via the module) |
| Enc2 | 0x2900 Enc2 Digital Interface Type | |
| Enc1 | 0x2103 Enc1 Digital Interface Config | Sub 01 (Level): 0=HTL, 1=TTL or 2=RS422 Sub 02 (Mode): 0=Multiturn or 1=Single Turn Sub 03 (Index Level): 0=Reference on rising edge 1=Reference on falling edge Sub 04 (SSI): 0=Straight binary 1=Grey coded binary Sub 05 (event counter): 0=Count rising edges 1=Count falling edges 3=Count both edges |
| Enc2 | 0x2903 Enc2 Digital Interface Config | |
| Enc1 | 0x2110 Enc1 Digital Interface Bit Size | Encoder resolution according to data sheet |
| Enc2 | 0x2910 Enc2 Digital Interface Bit Size | |
| Enc1 | 0x2111 Enc1 Digital Interface Baud Rate | Clock frequency according to data sheet [kHz] |
| Enc2 | 0x2911 Enc2 Digital Interface Baud Rate | |
| Enc1 | 0x6002 Enc1 Total Measuring Range | With setting "Single Turn" relevant for the overflow |
| Enc2 | 0x6802 Enc2 Total Measuring Range | |
| | | |

Encoder interface configuration – SSI Encoder

Object overview

| Slot | Object | Explanation |
|------|---|---|
| Enc1 | 0x2100 Enc1 Digital Interface Type | 65 SSI (Is assigned automatically via the module) |
| Enc2 | 0x2900 Enc2 Digital Interface Type | |
| Enc1 | 0x2103 Enc1 Digital Interface Config | Sub 01 (Level): 0=HTL, 1=TTL or 2=RS422 Sub 02 (Mode): 0=Multiturn or 1=Single Turn Sub 03 (Index Level): 0=Reference on rising edge 1=Reference on falling edge Sub 04 (SSI): 0=Straight binary 1=Grey coded binary Sub 05 (event counter): 0=Count rising edges 1=Count falling edges 3=Count both edges |
| Enc2 | 0x2903 Enc2 Digital Interface Config | |
| Enc1 | 0x2110 Enc1 Digital Interface Bit Size | Encoder resolution according to data sheet |
| Enc2 | 0x2910 Enc2 Digital Interface Bit Size | |
| Enc1 | 0x2111 Enc1 Digital Interface Baud Rate | Clock frequency according to data sheet [kHz] |
| Enc2 | 0x2911 Enc2 Digital Interface Baud Rate | |
| Enc1 | 0x6002 Enc1 Total Measuring Range | With setting "Single Turn" relevant for the overflow |
| Enc2 | 0x6802 Enc2 Total Measuring Range | |
| | | |

Encoder interface configuration – ENDAT Encoder

Object overview

| Slot | Object | Explanation |
|------|---|---|
| Enc1 | 0x2100 Enc1 Digital Interface Type | 69 EnDat (Is assigned automatically via the module) |
| Enc2 | 0x2900 Enc2 Digital Interface Type | |
| Enc1 | 0x2103 Enc1 Digital Interface Config | Sub 01 (Level): 0=HTL, 1=TTL or 2=RS422 Sub 02 (Mode): 0=Multiturn or 1=Single Turn Sub 03 (Index Level): 0=Reference on rising edge 1=Reference on falling edge Sub 04 (SSI): 0=Straight binary 1=Grey coded binary Sub 05 (event counter): 0=Count rising edges 1=Count falling edges 3=Count both edges |
| Enc2 | 0x2903 Enc2 Digital Interface Config | |
| Enc1 | 0x2110 Enc1 Digital Interface Bit Size | Encoder resolution according to data sheet |
| Enc2 | 0x2910 Enc2 Digital Interface Bit Size | |
| Enc1 | 0x2111 Enc1 Digital Interface Baud Rate | Clock frequency according to data sheet [kHz] |
| Enc2 | 0x2911 Enc2 Digital Interface Baud Rate | |
| Enc1 | 0x6002 Enc1 Total Measuring Range | With setting "Single Turn" relevant for the overflow |
| Enc2 | 0x6802 Enc2 Total Measuring Range | |
| | | |

Encoder interface configuration – Event counter

Object overview

| Slot | Object | Explanation |
|------|---|--|
| Enc1 | 0x2100 Enc1 Digital Interface Type | 80 event counter (Is assigned automatically via the module) |
| Enc2 | n/a | n/a |
| Enc1 | 0x2103 Enc1 Digital Interface Config | Sub 01 (Level): 0=HTL, 1=TTL or 2=RS422 Sub 02 (Mode): 0=Multi turn or 1=Single turn Sub 03 (Index Level): 0=Reference on rising edge 1=Reference on falling edge Sub 04 (SSI): 0=Straight binary 1=Grey coded binary |
| Enc2 | 0x2903 Enc2 Digital Interface Config | Sub 05 (event counter): 0=Count rising edges 1=Count falling edges 3=Count both edges |
| Enc1 | 0x2110 Enc1 Digital Interface Bit Size | Encoder resolution according to data sheet |
| Enc2 | 0x2910 Enc2 Digital Interface Bit Size | |
| Enc1 | 0x2111 Enc1 Digital Interface Baud Rate | Clock frequency according to data sheet [kHz] |
| Enc2 | 0x2911 Enc2 Digital Interface Baud Rate | |
| Enc1 | 0x6002 Enc1 Total Measuring Range | |
| Enc2 | 0x6802 Enc2 Total Measuring Range | With setting "Single Turn" relevant for the overflow |
| | | |

Information

The inputs of the event counter are not debounced or filtered and therefore not suitable for mechanical switches.

Encoder interface configuration – User-defined units

Besides the output of the position value in increments, the position value can also be output in user-defined units in REAL format. This applies to the use of incremental, SSI and ENDAT encoders.

The following objects are available for the output of the position value in user-defined units:

- 0x2014 Enc1 Linear Position Value
- 0x2814 Enc2 Linear Position Value

Add these objects to the PDO mapping if required.

The position value is calculated as follows:

$$\text{Linear Position Value} = \text{High Resolution Raw Value} * \frac{\text{Encoder Increments}}{\text{Motor Revolutions}} * \frac{\text{Motor Shaft Revolutions}}{\text{Driving Shaft Revolutions}} * \frac{\text{Feed}}{\text{Shaft Revolutions}}$$

Object overview

| Slot | Object | Explanation |
|------|---|---|
| Enc1 | 0x208f Enc1 Position Encoder Resolution | $\frac{\text{Encoder Increments}}{\text{Motor Revolutions}}$ |
| Enc2 | 0x288f Enc2 Position Encoder Resolution | |
| Enc1 | 0x2091 Enc1 Gear Ratio | $\frac{\text{Motor Shaft Revolutions}}{\text{Driving Shaft Revolutions}}$ |
| Enc2 | 0x2891 Enc2 Gear Ratio | |
| Enc1 | 0x2092 Enc1 Feed Constant | $\frac{\text{Feed}}{\text{Shaft Revolutions}}$ |
| Enc2 | 0x2892 Enc2 Feed Constant | |

Object dictionary

The Kuhnke FIO MIX 04 is divided into 3 virtual devices. The objects are structured as follows

| | |
|-------------------|---|
| 0x1000 ... 0x1FFF | Device specific |
| 0x2000 ... 0x23FF | Manufacture specific: Counter / Encoder 1 |
| 0x2800 ... 0x2FFF | Manufacture specific: Counter / Encoder 2 |
| 0x3000 ... 0x37FF | Manufacture specific: Analogue Input / Output |
| 0x6000 ... 0x67FF | Virtual Device: Counter / Encoder 1 |
| 0x6800 ... 0x6FFF | Virtual Device: Counter / Encoder 2 |
| 0x7000 ... 0x7FFF | Virtual Device: Analogue Input / Output |

0x1000 Device type

| | |
|-------------|----------|
| Object Code | Variable |
|-------------|----------|

| | |
|--------------|---------------|
| Sub | 0x00 |
| Name | Device type |

If a new error occurs, it is entered in subindex 1. The existing entries in sub-indexes 1 to 7 are moved one place back. The error on subindex 7 is removed.

The number of errors which have already occurred can be read from the object with subindex 0. If a "0" is written into this object, counting starts again.

| PDO Mapping | no |
| Accessname | Enc1DigitalInterfaceConfig.Enc1EventCou nter:Sensitivity |

Object for configuration of the counter/ encoder interface

Subindex 01 (Encoder: Level)

0 HTL (default)

1 TTL

2 RS422

Subindex 02 (Encoder: Mode)

0 Multiturn Encoder, no Index (default)

1 Single Turn Encoder

Subindex 03 (Encoder: Index level)

0 Reference on rising edge (default)

1 Reference on falling edge

3 Reference on both edges

Subindex 04 (SSI: Use grey code)

0 Straight binary (default)

1 Grey coded binary

Subindex 05 (Event Counter: Sensitivity)

0 Count rising edges (default)

- 1 Count falling edges
- 3 Count both edges

0x2110 Enc1 Digital Interface Bit Size

| | |
|-------------|----------|
| Object Code | Variable |

Technical Data

General

Order no. 694.454.53
I/O Supply 24 VDC (-20% / +25%)
Dimensions WxHxD..... 25 x 120 x 90 mm
Mounting 35 mm DIN-top hat rail
Storage temperature..... -25°C ... +70°C
Operating temperature 0°C ... +55°C
Relative humidity 5% ... 95% without dewing
Protection..... IP20
Interference immunity Zone B (DIN EN 61131-2)

Fieldbus (System)

Type EtherCAT* 100 Mbit/s
Connection..... 10-pole system plug at the side
Logic supply..... from EtherCAT-Coupler via E-Bus-plug
E-Bus-Last..... <100mA
Galvanic separation Separated from one another and versus the bus

Counter/Encoder

RS422..... 32Bit, 5 MHz
5/24V Single Ended..... 32Bit, 1,6 MHz
SSI 18-32 Bit, 80-1000 Kbit/s
EnDAT 2.1 100 kHz – 2 MHz
Event counter (CNT0-5) 6 x HTL/TTL 32Bit, 1 kHz

Encoder supply: 5V/150mA / encoder

Wire length:..... <30m shielded cable

5.5.3 Kuhnke FIO Drive Control

There is a separate instruction manual available for Kuhnke FIO Drive Control from the FIO range.
For further information, please click the link below.

Link to the documentation: <http://productfinder.kuhnke.kendrion.com/de>

Technical Data

| | |
|---------------------|--|
| Type | Kuhnke FIO Drive Control |
| Motor connection | 2-phase stepper motor or brushless DC motor |
| Power supply | electronics 24 VDC, motor 12..72 VDC (cULus 12..48 VDC) |
| Nominal current | 5 A, max 55°C, 5A @ 12..24 VDC / 4A @ 48 VDC) |
| Peak current | stepper motor: 10 A / brushless DC motor: 15 A |
| Incremental encoder | 5V / 24V (A, /A, B, /B, Z, /Z) |
| Hall generator | 24 V (H1, H2, H3) or 3 extra low side switching digital inputs |
| Digital inputs | 5x 1 ms (configurable, reference switch, limit switch, enable) |
| Digital outputs | 1x 0.5 A (brake output or standard output) |
| Fieldbus port | EtherCAT® 100 Mbps LVDS: E-bus |
| Installation | 35 mm DIN rail |
| Signal indication | LED located next to the terminal |
| Shield | provided directly by the module |
| Terminals | spring-assisted combi plug w/ mechanical ejector |
| Ambient conditions | 0 °C...+55 °C, IP 20, immunity to noise: Zone B to EN61131-2 |
| Housing (W x H x D) | aluminium frame, plastic 25 x 120 x 90 [mm] |
| Approval | CE, cULus |

5.5.4 Kuhnke FIO CAM Control

There is a separate instruction manual available for Kuhnke FIO CAM Control from the FIO range.

| 3 | RxD/TxD-P | Data + |
| 4 | RxD/TxD-N | Data - |

Status LEDs

LED "RN"

The LED labelled "RN" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|------------------|----------------|------------------------------------|
| Ok | Green, on | No error |
| Error | Red, flashing | 1x short circuit 2x low voltage |
| Start, defective | Red | Module not initialised |

LED "PW"

The LED labelled "PW" indicates the state of the I/O module's I/O power supply.

| State | LED flash code | Explanation |
|-------|----------------|----------------------|
| On | Green, on | 24 VDC supply ok |
| Off | Off | 24 VDC supply not ok |

LEDs "Channel"

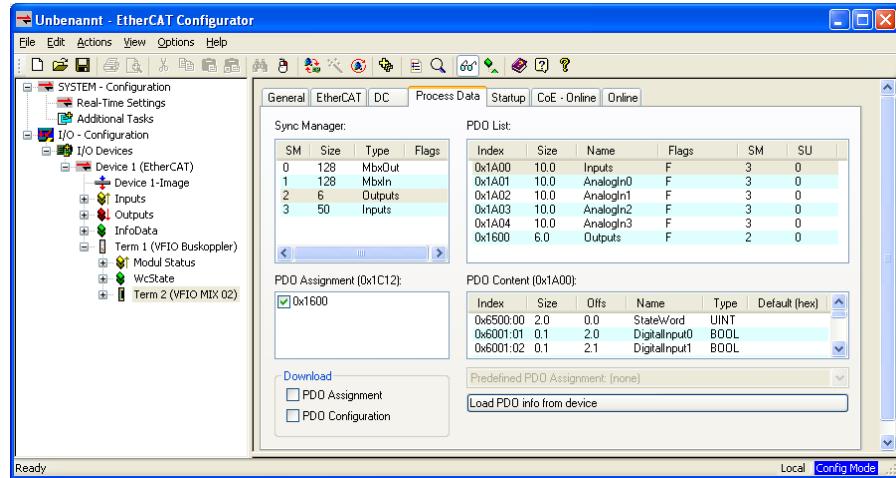

The LEDs labelled "Channel" indicate the state of the associate input/output signal.

| State | LED | Explanation |
|-------|-----------|--------------------------------------|
| On | Green, on | Input signal TRUE / output enabled |
| Off | Off | Input signal FALSE / output disabled |

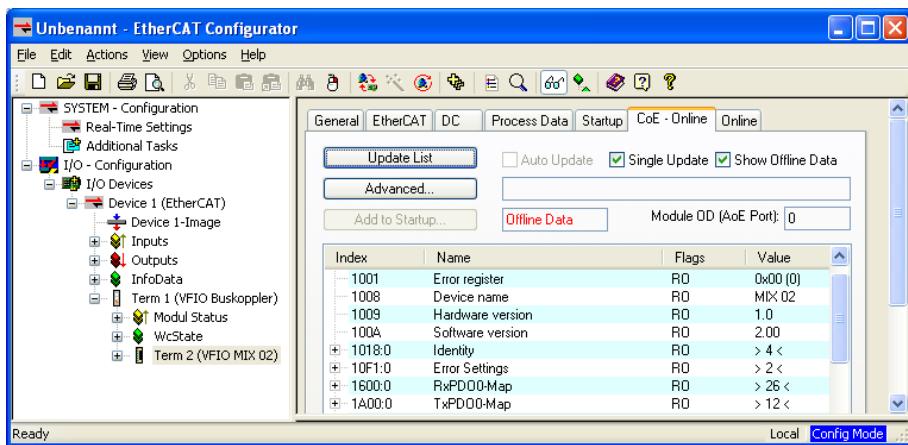

Function (CoE Variant)

Module MIX 02 features 4 interrupt-enabled digital inputs (configurable as counters), 4 analogue inputs (configurable as digital inputs) and 24 digital outputs.

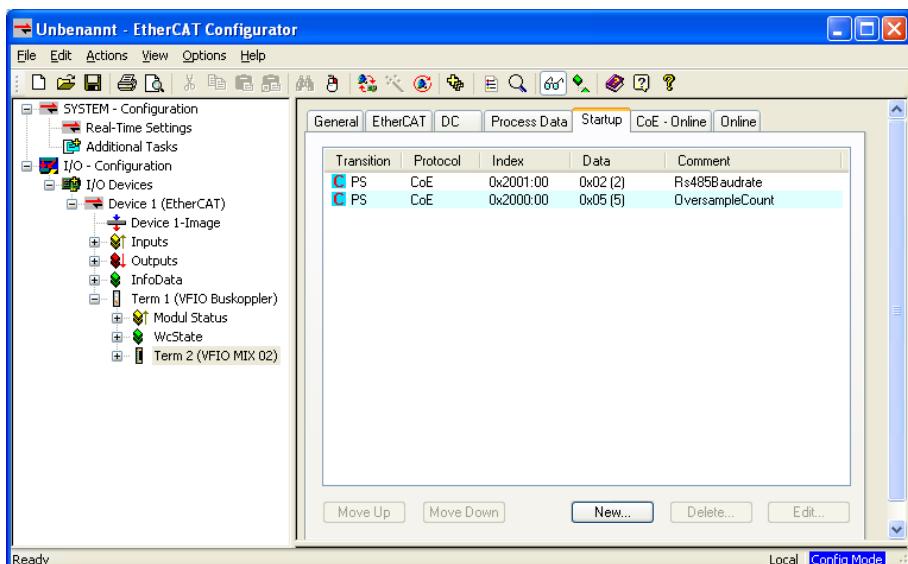

The process data objects stored as variables in the EtherCAT master's control program are used to access the IOs and the module state.

Service data objects (SDO) are available for details and settings.

You may run the configuration tool offline to change some settings of module MIX 02 (such as the RS485 baud rate). The EtherCAT master will apply the settings when starting up the module.

You can also use the SDO transfer components available for the EtherCAT master to change settings at runtime and to handle RS485 data transfer.

Inputs

The following input values apply to group Inputs:

| Variable | Data type | Explanation |
|--------------------|-----------|---|
| StateWord | UINT | State word |
| | | Bit0 Data ready for RS485 reception |
| | | Bit1 RS485 in-buffer overflow |
| | | Bit2 Short circuit (overload) of outputs |
| | | Bit3 Low CPU voltage |
| | | Bit4 Low In/Out (load) voltage |
| | | Bit5 EtherCAT watchdog error |
| | | Bit6..15 Not used |
| DigitalInput0 | BOOL | Digital input 0 |
| DigitalInput1 | BOOL | Digital input 1 |
| DigitalInput2 | BOOL | Digital input 2 |
| DigitalInput3 | BOOL | Digital input 3 |
| DigitalInput4 | BOOL | Digital input 4 |
| DigitalInput5 | BOOL | Digital input 5 |
| DigitalInput6 | BOOL | Digital input 6 |
| DigitalInput7 | BOOL | Digital input 7 |
| Counter | UDINT | Reading of event counter at DI5 |
| SampleCycleCounter | UINT | Increments when new analogue values are available |

AnalogIn0

The following input values apply to group AnalogIn0:

| Variable | Data type | Explanation |
|-------------------|-----------|------------------------------|
| AnalogIn0_Sample0 | UINT | Analogue input 0, sample n |
| AnalogIn0_Sample1 | UINT | Analogue input 0, sample n+1 |
| AnalogIn0_Sample2 | UINT | Analogue input 0, sample n+2 |
| AnalogIn0_Sample3 | UINT | Analogue input 0, sample n+3 |
| AnalogIn0_Sample4 | UINT | Analogue input 0, sample n+4 |

AnalogIn1

The following input values apply to group AnalogIn1:

| Variable | Data type | Explanation |
|-------------------|-----------|------------------------------|
| AnalogIn1_Sample0 | UINT | Analogue input 1, sample n |
| AnalogIn1_Sample1 | UINT | Analogue input 1, sample n+1 |
| AnalogIn1_Sample2 | UINT | Analogue input 1, sample n+2 |
| AnalogIn1_Sample3 | UINT | Analogue input 1, sample n+3 |
| AnalogIn1_Sample4 | UINT | Analogue input 1, sample n+4 |

AnalogIn2

The following input values apply to group AnalogIn2:

| Variable | Data type | Explanation |
|----------|-----------|-------------|
| | | |

| | | |
|-------------------|------|------------------------------|
| AnalogIn2_Sample0 | UINT | Analogue input 2, sample n |
| AnalogIn2_Sample1 | UINT | Analogue input 2, sample n+1 |
| AnalogIn2_Sample2 | UINT | Analogue input 2, sample n+2 |
| AnalogIn2_Sample3 | UINT | Analogue input 2, sample n+3 |
| AnalogIn2_Sample4 | UINT | Analogue input 2, sample n+4 |

AnalogIn3

The following input values apply to group AnalogIn3:

| Variable | Data type | Explanation | |
|-------------------|-----------|------------------------------|--|
| AnalogIn3_Sample0 | UINT | Analogue input 3, sample n | |
| AnalogIn3_Sample1 | UINT | Analogue input 3, sample n+1 | |
| AnalogIn3_Sample2 | UINT | Analogue input 3, sample n+2 | |
| AnalogIn3_Sample3 | UINT | Analogue input 3, sample n+3 | |
| AnalogIn3_Sample4 | UINT | Analogue input 3, sample n+4 | |

Outputs

The following input values apply to group Outputs:

| Variable | Data type | Explanation | |
|-----------------|-----------|-------------------|--------------------------------------|
| ControlWord | UINT | Bit 0 | Reset error message |
| | | Bit 1 | Reset counter (started by edge 0->1) |
| | | Bits 2..15 | Not used |
| DigitalOutput0 | BOOL | Digital output 0 | |
| DigitalOutput1 | BOOL | Digital output 1 | |
| DigitalOutput2 | BOOL | Digital output 2 | |
| DigitalOutput3 | BOOL | Digital output 3 | |
| DigitalOutput4 | BOOL | Digital output 4 | |
| DigitalOutput5 | BOOL | Digital output 5 | |
| DigitalOutput6 | BOOL | Digital output 6 | |
| DigitalOutput7 | BOOL | Digital output 7 | |
| DigitalOutput8 | BOOL | Digital output 8 | |
| DigitalOutput9 | BOOL | Digital output 9 | |
| DigitalOutput10 | BOOL | Digital output 10 | |
| DigitalOutput11 | BOOL | Digital output 11 | |
| DigitalOutput12 | BOOL | Digital output 12 | |
| DigitalOutput13 | BOOL | Digital output 13 | |
| DigitalOutput14 | BOOL | Digital output 14 | |
| DigitalOutput15 | BOOL | Digital output 15 | |
| DigitalOutput16 | BOOL | Digital output 16 | |
| DigitalOutput17 | BOOL | Digital output 17 | |
| DigitalOutput18 | BOOL | Digital output 18 | |
| DigitalOutput19 | BOOL | Digital output 19 | |
| DigitalOutput20 | BOOL | Digital output 20 | |
| DigitalOutput21 | BOOL | Digital output 21 | |
| DigitalOutput22 | BOOL | Digital output 22 | |
| DigitalOutput23 | BOOL | Digital output 23 | |

| Variable | Data type | Explanation |
|-----------------|-----------|-------------------|
| DigitalOutput24 | BOOL | Digital output 24 |

Analogue Inputs / Oversampling

The module cyclically gets the sensor values of the analogue inputs and assigns them to variables available for download by the EtherCAT master. Analysing the progression of analogue values must take account of both the cycle time of analogue conversions and the EtherCAT cycle.

Oversampling and its configurable parameters is provided by the module for detailed analysis. There are 2 control methods you can choose from in the configuration tool:

synchronised with SM (SM=Sync Master)

synchronised with DC (DC=Distributed Clocks)

Analogue Inputs / Oversampling Synchronised with SM

The module measures 4 analogue values per millisecond and adds or does not add them to the process image, depending on what the Oversampling parameter (Object Index 0x2000) is set to. The default is 5. This setting refreshes the analogue process image every 5 ms (check how counter input *SampleCycleCounter* increments). The readings taken every millisecond are entered in *Sample0..4* of variable *AnalogIn0.. AnalogIn4*.

Lower parameter settings refresh the process image more often and the unused sample values are left blank.

Example:

Oversampling parameter = 1 refreshes the process image after 1 millisecond already. Values will be entered in *Sample0* only. *Sample 1..4* are left blank.

Oversampling Synchronised with DC

Interrupt SYNC0 is used for analogue sampling whereas interrupt SYNC1 is used to transfer the data to the process image.

SYNC0 can be 1 to 5 times faster than SYNC1.

Example 1:

Bus cycle = 5 ms. Setting to use: "DC-synchronised 5x oversampling".

This is running Sync1 every 5 ms and SYNC0 every 1 ms.

Thus, analogue samples are read every millisecond and added to *Sample 0 to 4* of the process image after 5 ms. The *SampleCycleCounter* increments after 5 ms.

Example 2:

Bus cycle = 2 ms. Setting to use: "DC-synchronised 4x oversampling".

This is running Sync1 every 2 ms and SYNC0 every 0.5 ms.

Thus, analogue samples are read every half millisecond and added to *Sample 0 to 3* of the process image after 2 ms. *Sample4* stays 0. The *SampleCycleCounter* increments after 2 ms.

Example 3:

Bus cycle = 1 ms. Setting to use: "DC-synchronised".

This is running Sync0 every 1 ms.

Thus, analogue samples are read and added to Sample 0 of the process image every millisecond. Sample1 to 4 stay 0.

The *SampleCycleCounter* increments after 1 ms.

RS485

Object 0x2001 sets the RS485 baud rate.

| Value | Baud Rate |
|-------------|-----------|
| 0 | 2400 |
| 1 | 4800 |
| 2 (default) | 9600 |
| 3 | 19200 |
| 4 | 38400 |
| 5 | 57600 |
| 6 | 115200 |
| 7 | 230400 |
| 8 | 460800 |
| 9 | 921600 |

Object 0x2002 is used to send and receive data.

| Byte | Explanation |
|------|----------------|
| 0 | Volume of data |
| 1 | - |
| 2 | Data byte 0 |
| ... | ... |
| 9 | Data byte 7 |

Writing the object sends the [volume of data] of data bytes 0..7.

Reading the object retrieves not more than 8 data bytes from the in-queue.

[Volume of data] = 0 means that no data has been received.

Every SDO transfer to and from the object contain 10 bytes.

Bit0 of the StateWord indicates that there is data in the in-queue.

The data-in buffer contains not more than 1024 bytes. Bit1 of the *StateWord* indicates a buffer overflow.

Counter

Inputs DI5..7 are not only used as digital inputs but also as an event counter.

Counter reading *Inputs, Counter* is a 32-bit value.

- The counting cycle connects to DI5.
- DI6 sets the counting direction.
If DI6=FALSE, every rising edge of DI5 increments *Inputs, Counter*.
If DI6=TRUE , every rising edge of DI5 decrements *Input Data, PositionCounter*.

A rising edge of DI7 sets *Input, Counter* to 0

The count can also be reset by the software (rising edge of *Outputs, ControlWord Bit1*).

Analogue Inputs / Oversampling

Analogue values are converted cyclically every 1 ms but not synchronised with the receipt of EtherCAT frames. The module provides oversampling.

Reading are or are not added to the process image, depending on what the oversampling parameter is set to. The default is 5.

This setting refreshes the entire set of analogue values in the process images after 5 ms (check how the counter in the StateWord increments). The readings taken every 1 ms are entered in variables AnalogInx_Sample0..4 (x=0..3).

Lower oversampling parameter settings refresh the process image more often and the unused sample values are left blank.

Oversampling parameter = 1 refreshes the process image after 1 millisecond already.
Values will be entered in Sample0 only. Samples 1..4 are left blank.

| | |
|---|--------------------|
|  | Information |
| <p><i>Refreshing of the EtherCAT master's analogue values:</i> <i>Take account of the EtherCAT cycle to assess whether the EtherCAT master's values are up-to-date. Ideal EtherCAT cycles for this module are 1 ms to 5 ms long.</i></p> | |

| | |
|--|--------------------|
|  | Information |
| <p><i>Consistent analogue values:</i> <i>The module provide consistent sets of analogue values. Note that analysing the master's sample values must also be consistent.</i></p> | |

| | |
|---|--------------------|
|  | Information |
| <p><i>Quality of analogue values:</i> <i>Best results are obtained by connecting the shield of the signal cables to operative earth.</i></p> | |

Low Voltage

Low CPU or load voltage turns off the outputs, sets bits 3 or 4 of Inputs, StateWord and makes LED IO of the module flash (2x).

Use Outputs, ControlWord bit0 to reset the error when the voltage has returned to the admissible range (24V -20%...+25%). This also re-enables the outputs.

Short Circuit

A thermal fuse at the output driver protects the outputs. When the current exceeds the admissible range, the associated output turns off, bits 3 of Inputs, StateWord are set and LED IO of the module flashes (1x).

Use Outputs, ControlWord bit0 to reset the error after removing the short circuit.

Technical Data

| | |
|--------------------------|---------------------------------------|
| Digital inputs | 4 (8) |

5.6.2 MIX 04

Front view and I/O connection

Front view I/O-Module MIX 04

Status LEDs

LED "EtherCAT Run"

The LED labelled "EtherCAT Run" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|-----------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | green, | Operational, unrestricted data exchange |
| Bootstrap | Flickering | Optional if bootstrap mode is supported |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|-------|------------------|--|
| Ok | Green, on | No Error |
| Error | Off | Malfunction of module if E-bus LED = On Inoperative if E-bus LED = Off |
| | Red, 2 x | Undervoltage |
| | Red, 3 x | Watchdog internal |
| | Red, 4 x | EtherCAT watchdog control |
| | Red, 6 x | Module- specific error, please see details in Predefined Error Field 0x1003:01 ... 08 |
| | Red, 7 x | Configuration error (E-bus pre-operational), no. of process data differs from that in the module |
| | Start, defective | Module defektiv |

LED "Power"

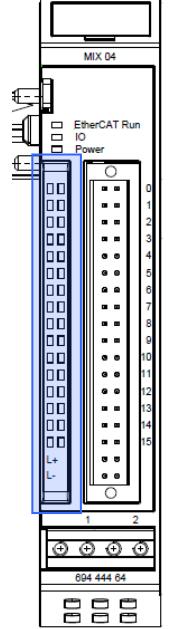

The LED labelled "Power" indicates the state of the I/O module's power supply.

| State | LED flash code | Explanation |
|-------|----------------|-----------------------|
| On | Green, on | 24 V DC supply ok |
| Off | Off | 24 V DC supply not ok |

LEDs "Channel"

The channel LEDs indicates the state of the In-/Output-Signals.

| Channel | | | Channel | Explanation | |
|---------|--|--|---------|---|--|
| AI0+ | | | AI2+ | 2-color LED: Analogue input activated, Error | |
| AI0- | | | AI2- | | |
| AI1+ | | | AI3+ | 2- color LED: Analogue input activated, Error | |
| AI1- | | | AI3- | | |
| GND | | | GND | | |
| 5V | | | 5V | | |
| A+/CLK+ | | | A+/CLK+ | Inkremental encoder: The LEDs indicate the signal status of the incremental encoder track. EnDat / SSI: The LEDs light up in time with the clock or data signal Event counter: The LEDs indicate the signal state of the event counter input | |
| A-/CLK- | | | A-/CLK- | | |
| B+/DAT+ | | | B+/DAT+ | | |
| B-/DAT- | | | B-/DAT- | | |
| Z+ | | | Z+ | | |
| Z- | | | Z- | | |
| AO0+ | | | AO2+ | Analogue output activated and without error | |
| AO0- | | | AO2- | | |
| AO1+ | | | AO3+ | Analogue output activated and without error | |
| AO1- | | | AO3- | | |

Function

The Kuhnke FIO Mix 04 module has 4 analogue inputs for recording current or voltage values and 4 analogue outputs for outputting analogue current or voltage values.

Furthermore the Kuhnke FIO Mix 04 module has 2 counter / encoder interfaces for the connection of incremental encoders or absolute value position encoders with SSI or EnDat interface. The interface can also be configured as event counter, so that 6 independent event counters are available.

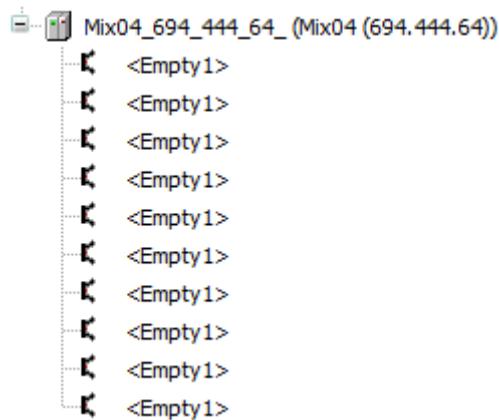

All channels can be parameterized almost independently of each other, which gives the module a high degree of flexibility.

Module configuration

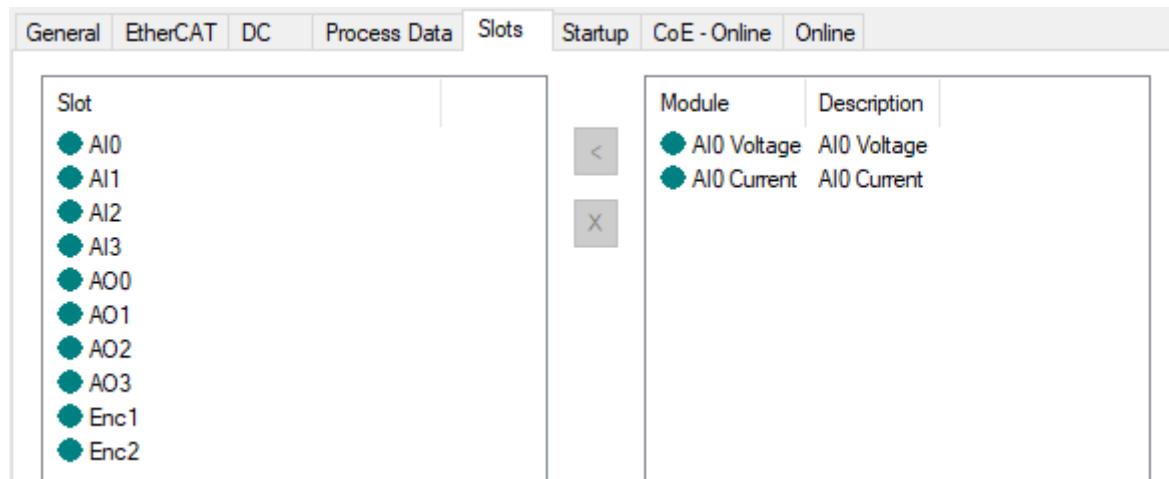

The configuration of the analogue inputs and outputs as well as the counter/encoder interfaces is done via pluggable modules that are inserted into the corresponding slots. One slot corresponds to one analogue channel or one counter/encoder interface. Only suitable modules can be plugged into the selected slot. This procedure is based on the "EtherCAT Modular Device Profile".

| | |
|---|--------------------|
|  | Information |
| <i>All slots must be equipped with a module.</i> | |

Encoder interface

The universal encoder interface offers a wide range of possibilities for the acquisition of angles, positions and pulses to be counted.

The following encoders can be connected:

- Inkremental encoder with RS422 interface (RS422)
- Inkremental encoder with 5V single ended interface (TTL)
- Inkremental encoder with 24V single ended interface (HTL)
- SSI- Encoder
- EnDat 2.1 single turn encoder
- EnDat 2.1 multi turn encoder

These encoders can be mixed as required. The module also provides the supply voltage for 5V encoders with a maximum of 150mA per encoder. This is monitored and an error is signalled if it is exceeded.

The encoder interface can also be used as an event counter and record 6 fast signals. In this case no encoder can be connected.

In the following chapters you will find an overview of the configuration options with the associated objects. These are linked to the object directory.

Encoder interface configuration – Incremental encoder

Object overview

| Slot | Object | Explanation |
|------|---|---|
| Enc1 | 0x2100 Enc1 Digital Interface Type | 64 Encoder (is assigned automatically via the module) |
| Enc2 | 0x2900 Enc2 Digital Interface Type | |
| Enc1 | 0x2103 Enc1 Digital Interface Config | Sub 01 (Level): 0=HTL, 1=TTL or 2=RS422 Sub 02 (Mode): 0=Multiturn or 1=Single Turn Sub 03 (Index Level): 0=Reference on rising edge 1=Reference on falling edge Sub 04 (SSI): 0=Straight binary 1=Grey coded binary Sub 05 (event counter): 0=Count rising edges 1=Count falling edges 3=Count both edges |
| Enc2 | 0x2903 Enc2 Digital Interface Config | |
| Enc1 | 0x2110 Enc1 Digital Interface Bit Size | Encoder resolution according to data sheet |
| Enc2 | 0x2910 Enc2 Digital Interface Bit Size | |

| Enc1 | 0x6002 Enc1 Total Measuring Range | Encoder resolution according to data sheet |
| Enc2 | 0x6802 Enc2 Total Measuring Range | |
| | | |

Encoder interface configuration – ENDAT Encoder

Object overview

| Slot | Object | Explanation |
|------|---|---|
| Enc1 | 0x2100 Enc1 Digital Interface Type | 69 EnDat (Is assigned automatically via the module) |
| Enc2 | 0x2900 Enc2 Digital Interface Type | |
| Enc1 | 0x2103 Enc1 Digital Interface Config | Sub 01 (Level): 0=HTL, 1=TTL or 2=RS422 Sub 02 (Mode): 0=Multiturn or 1=Single Turn Sub 03 (Index Level): 0=Reference on rising edge 1=Reference on falling edge Sub 04 (SSI): 0=Straight binary 1=Grey coded binary Sub 05 (event counter): 0=Count rising edges 1=Count falling edges 3=Count both edges |
| Enc2 | 0x2903 Enc2 Digital Interface Config | |
| Enc1 | 0x2110 Enc1 Digital Interface Bit Size | Encoder resolution according to data sheet |
| Enc2 | 0x2910 Enc2 Digital Interface Bit Size | |
| Enc1 | 0x2111 Enc1 Digital Interface Baud Rate | Clock frequency according to data sheet [kHz] |
| Enc2 | 0x2911 Enc2 Digital Interface Baud Rate | |
| Enc1 | 0x6002 Enc1 Total Measuring Range | Encoder resolution according to data sheet |
| Enc2 | 0x6802 Enc2 Total Measuring Range | |
| | | |

Encoder interface configuration – Event counter

Object overview

| Slot | Object | Explanation |
|------|---|--|
| Enc1 | 0x2100 Enc1 Digital Interface Type | 80 event counter (Is assigned automatically via the module) |
| Enc2 | 0x2900 Enc2 Digital Interface Type | |
| Enc1 | 0x2103 Enc1 Digital Interface Config | Sub 01 (Level): 0=HTL, 1=TTL or 2=RS422 Sub 02 (Mode): 0=Multi turn or 1=Single turn Sub 03 (Index Level): 0=Reference on rising edge 1=Reference on falling edge Sub 04 (SSI): 0=Straight binary 1=Grey coded binary Sub 05 (event counter): 0=Count rising edges 1=Count falling edges 3=Count both edges |
| Enc2 | 0x2903 Enc2 Digital Interface Config | |
| Enc1 | 0x2110 Enc1 Digital Interface Bit Size | Encoder resolution according to data sheet |
| Enc2 | 0x2910 Enc2 Digital Interface Bit Size | |
| Enc1 | 0x2111 Enc1 Digital Interface Baud Rate | Clock frequency according to data sheet [kHz] |
| Enc2 | 0x2911 Enc2 Digital Interface Baud Rate | |
| Enc1 | 0x6002 Enc1 Total Measuring Range | Encoder resolution according to data sheet |
| Enc2 | 0x6802 Enc2 Total Measuring Range | |
| | | |

Information

The inputs of the event counter are not debounced or filtered and therefore not suitable for mechanical switches.

Encoder interface configuration – User-defined units

Besides the output of the position value in increments, the position value can also be output in user-defined units in REAL format. This applies to the use of incremental, SSI and ENDAT encoders.

The following objects are available for the output of the position value in user-defined units:

- 0x2014 Enc1 Linear Position Value
- 0x2814 Enc2 Linear Position Value

Add these objects to the PDO mapping if required.

The position value is calculated as follows:

$$\text{Linear Position Value} = \text{High Resolution Raw Value} * \frac{\text{Encoder Increments}}{\text{Motor Revolutions}} * \frac{\text{Motor Shaft Revolutions}}{\text{Driving Shaft Revolutions}} * \frac{\text{Feed}}{\text{Shaft Revolutions}}$$

Object overview

| Slot | Object | Explanation |
|------|---|---|
| Enc1 | 0x208f Enc1 Position Encoder Resolution | $\frac{\text{Encoder Increments}}{\text{Motor Revolutions}}$ |
| Enc2 | 0x288f Enc2 Position Encoder Resolution | |
| Enc1 | 0x2091 Enc1 Gear Ratio | $\frac{\text{Motor Shaft Revolutions}}{\text{Driving Shaft Revolutions}}$ |
| Enc2 | 0x2891 Enc2 Gear Ratio | |
| Enc1 | 0x2092 Enc1 Feed Constant | $\frac{\text{Feed}}{\text{Shaft Revolutions}}$ |
| Enc2 | 0x2892 Enc2 Feed Constant | |

Analogue interface configuration – Analogue inputs

If a new error occurs, it is entered in subindex 1. The existing entries in sub-indexes 1 to 7 are moved one place back. The error on subindex 7 is removed.

The number of errors which have already occurred can be read from the object with subindex 0. If a "0" is written into this object, counting starts again.

| Accessname | Enc2DigitalInterfaceConfig.Enc2EventCounter:Sensitivity |

Object for configuration of the counter/ encoder interface

Subindex 01 (Encoder: Level)

0 HTL (default)

1 TTL

2 RS422

Subindex 02 (Encoder: Mode)

0 Multiturn Encoder, no Index (default)

1 Single Turn Encoder

Subindex 03 (Encoder: Index level)

0 Reference on rising edge (default)

1 Reference on falling edge

3 Reference on both edges

Subindex 04 (SSI: Use grey code)

0 Straight binary (default)

1 Grey coded binary

Subindex 05 (Event Counter: Sensitivity)

0 Count rising edges (default)

1 Count falling edges

3 Count both edges

0x2910 Enc2 Digital Interface Bit Size

Analogue output values as integer value

Technical Data

General

| | |
|-----------------------|---------------------------|
| Order no. | 694.444.64 |
| I/O Supply | 24 VDC (-20% / +25%) |
| Dimensions WxHxD | 25 x 120 x 90 mm |
| Mounting | 35 mm DIN-top hat rail |
| Storage temperature | -25°C ... +70°C |
| Operating temperature | 0°C ... +55°C |
| Relative humidity | 5% ... 95% without dewing |
| Protection | IP20 |
| Interference immunity | Zone B (DIN EN 61131-2) |

Fieldbus (System)

| | |
|---------------------|---|
| Type | EtherCAT* 100 Mbit/s |
| Connection | 10-pole system plug at the side |
| Logic supply | from EtherCAT-Coupler via E-Bus-plug |
| E-Bus-Last | <100mA |
| Galvanic separation | Separated from one another and versus the bus |

Analogue inputs

| | |
|-------------------------------|----------------------------|
| Number | 4 |
| Type | 0 ... 10 V, 0(4) ... 20 mA |
| Internal resistance (Voltage) | >200 kΩ |
| Internal resistance (Current) | 120 Ω |
| Resolution | 12 Bit |
| Sampling rate | <62,5 µs |

Analogue outputs

| | |
|----------------|---|
| Number | 4 |
| Type | 0 ... 10 V, -10 ... +10 V, 0(4) ... 20 mA |
| Load (Voltage) | >1000 Ω (short circuit protected) |
| Load (Current) | <500 Ω (short circuit protected) |
| Resolution | 16 Bit |
| Sampling rate | <=250 µs |

Counter/Encoder

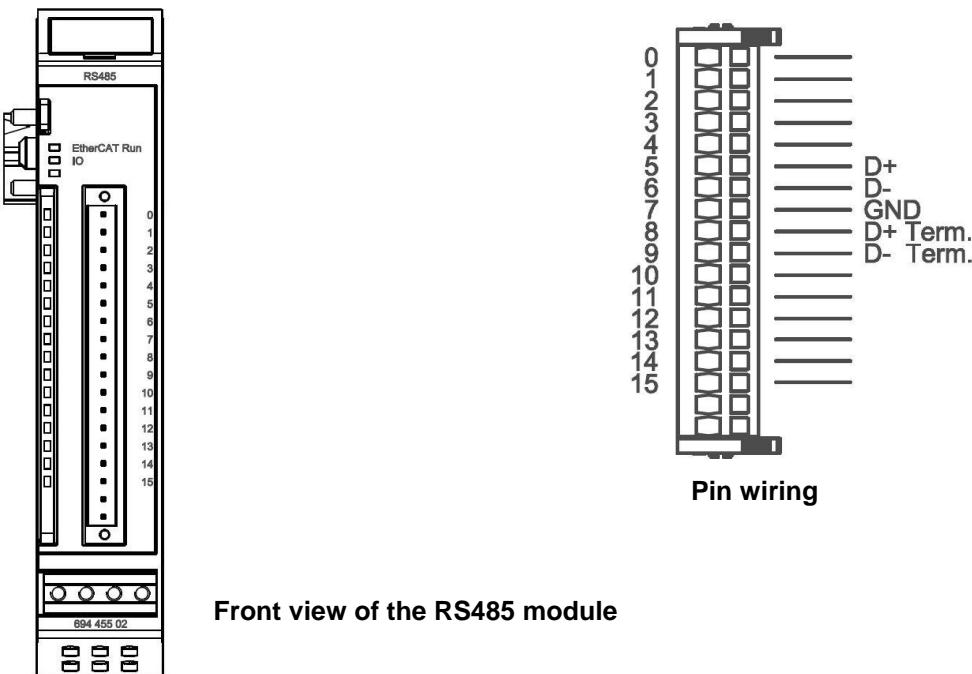

| | |
|------------------------|---------------------------|
| RS422 | 32Bit, 5 MHz |
| 5/24V Single Ended | 32Bit, 1,6 MHz |
| SSI | 18-32 Bit, 80-1000 Kbit/s |
| EnDAT 2.1 | 100 kHz – 2 MHz |
| Event counter (CNT0-5) | 6 x HTL/TTL 32Bit, 1 kHz |

Encoder supply: 5V/150mA / encoder

Wire length: <30m shielded cable

5.7 Interface and Communication Modules

5.7.1 RS485 1 Port

The module provides a RS485 interface accessible by EtherCAT.

Run CoE (CODESYS configuration tool) to set the parameters. The process image is the medium of data interchange. A [library can be downloaded](#) (*RS485 is there COM2*) for this module.

Terminals

IO Connection, Male 18-pin

| Trm. | Signal | Explanation |
|--------|----------|------------------------|
| 0..4 | - | Not used |
| 5 | D+ | Data + |
| 6 | D- | Data - |
| 7 | GND | earth potential |
| 8 | D+ Term. | Bus termination, Data+ |
| 9 | D- Term. | Bus termination, Data- |
| 10..15 | - | Not used |

Status LEDs

LED "EtherCAT Run"

The LED labelled "RN" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|------------------|----------------|-------------------------|
| Ok | Green, on | No error |
| Error | Red, 4x | EtherCAT watchdog |
| | Red, 5x | Transmit queue overflow |
| | Red, 6x | Receive queue overflow |
| | Red, 7x | No Tx counter |
| Start, defective | Red | Module not initialised |

LED "Power"

Not used

LEDs "Channel [COM State]"

The "Channel" LEDs indicate the state of every channel.

| State | LED | Explanation |
|-------|---------------------|--------------------------------|
| On | Green, flashing | Communication |
| Off | Off | No communication |
| Error | Red/green, flashing | Controller communication error |
| | Red, flashing | Controller error |

Process Image

There are 20 PDOs containing 8 bytes of data each for every direction. Use PDO Assignment (objects 1C12 and 1C13) to vary the volume of data. Taken together with the mailboxes (32 bytes each), this is the maximum configuration of ET1200.

Output Data (PLC -> IO, 0-160 Bytes)

| Name | Size | Source |
|----------------|---------|--------|
| ControlData | 8 bytes | PLC |
| TxData1[0..7] | 8 bytes | PLC |
| ... | ... | ... |
| TxData19[0..7] | 8 bytes | PLC |

The process image holds max. 152 bytes of payload data per direction.

ControlData:

| Name | Format | Source |
|--------------|----------|---|
| TxCounter | Word | Incrementing the TxCounter tells the gateway that the process image contains new data to be sent. |
| RxCounterCon | Word | If synchronised data (RxSync) is used, this object is used to acknowledge that the data received has been processed. Only then will the gateway send the next data. |
| TxNrOfMsg | Word | Number of bytes to be sent from the process image. Range: 0..152. Starting point of the data section is TxData1[0]. |
| ResetError | Bit (1) | Bit 0 ->1: Resets errors that have been removed. |
| Unused 0..14 | Bit (15) | |

Input Data (IO -> PLC, 0..160 Bytes)

| Name | Size | Source |
|----------------|---------|--------|
| StateData | 8 bytes | IO |
| RxData1[0..7] | 8 bytes | IO |
| ... | ... | ... |
| RxData19[0..7] | 8 bytes | IO |

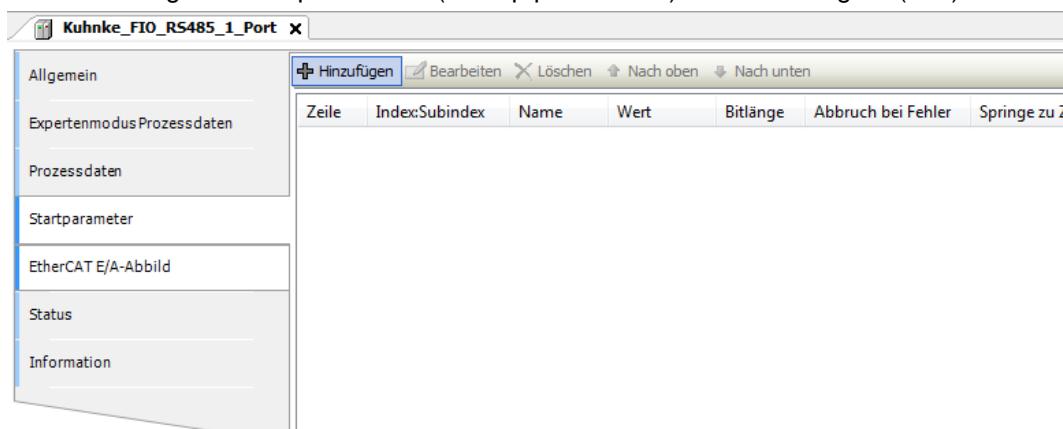

StateData:

| Name | Format | Source |
|----------------|---------|--|
| TxCounterCon | Word | The gateway shows the TxCounter again to confirm the new out-queue data. |
| RxCounter | Word | Incrementing the RxCounter indicates that the process image contains new in-queue data. |
| RxNrOfMsg | Word | Number of bytes received by the process image. Range: 0..152. Starting point of the data section is RxData1[0]. |
| ResetErrorAck | Bit (1) | Acknowledges the state of the Reset Error signal. |
| EtherCATError | Bit (1) | If 1: Sync Manager watchdog triggered (watchdog control) |
| Unused 0 | Bit (1) | |
| Unused 1 | Bit (1) | |
| TxCounterMiss | Bit(1) | The gateway checks the TxCounter for steady increments. This error indicates a skipped increment. Best use TxCounterCon to send new data. |
| Unused 2 | Bit (1) | |
| COM_TxQueueOvr | Bit (1) | Overflow of the gateway's out-buffer. Too much data is being sent or the baud rate is too low. |
| COM_RxQueueOvr | Bit (1) | In-buffer overflow. Data is being accepted too slowly. Either speed up the EtherCAT task or reduce the volume of data (lower baud rate). |
| Unused 3 | Bit (1) | |
| COM_CtrlErr | Bit (1) | RS485 controller error (bit error or overrun) |
| Unused 4..7 | Bit (4) | |
| COM_TxBusy | Bit (1) | The interface is transmitting data |
| Unused 8 | Bit (1) | |

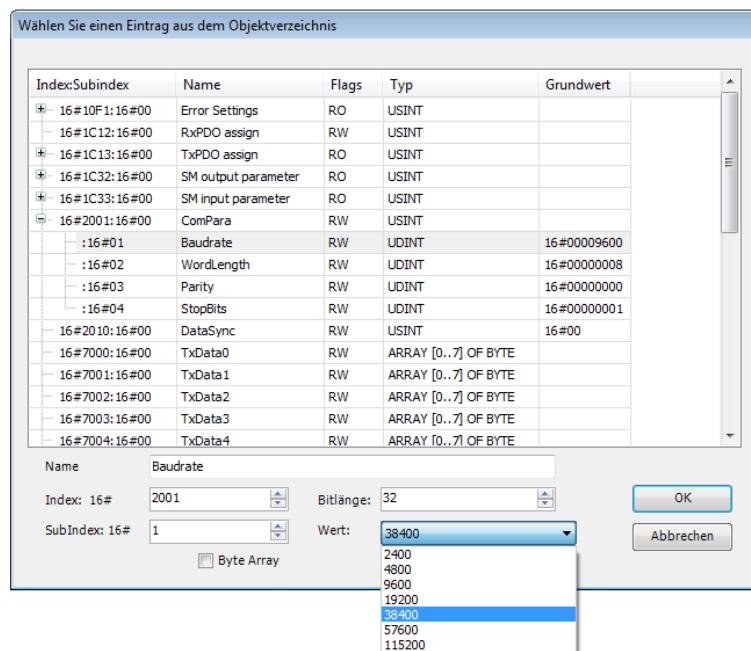

Configuration

Run CoE to configure the RS485 module. You can directly set the startup parameters.

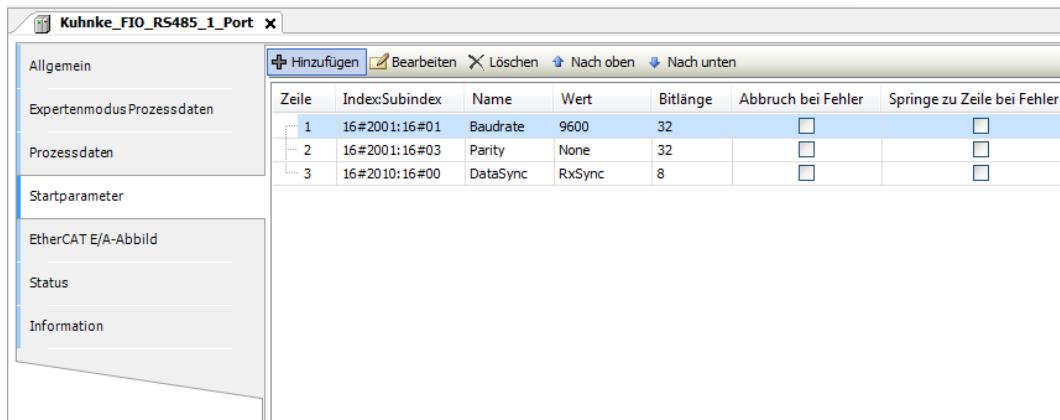

Select the module and go to "Startparameter" (startup parameters) and "Hinzufügen" (add).

Now go to ComParameter and change the Baud Rate or other settings as appropriate or enable/disable data synchronisation.

Your settings are then displayed on tab "Startparameter" (startup parameters).

Sample Program

The example below illustrates how a program works. It does not use library available for the communication module.

Visit Kendrion Kuhnke's Product Finder to download a sample project and the library.

Link: <http://productfinder.kuhnke.kendrion.com>

Run your development environment (e.g. CODESYS) to set the interface parameters, including the baud rate, parity, stop bits, etc.

Refer to section Object Dictionary. The settings are applied when PreOp turns into SafeOp.

Running SDO components to make changes in state Operational will therefore have no effect.

Transfer Data:

Initial state:

TxCounter = 0 TxCounterCon = 0

TxNrofMsg := 6;

TxDATA1[0] = `H`

TxDATA1[1] = `e`

TxDATA1[2] = `l`

TxDATA1[3] = `l`

TxDATA1[4] = `o`

TxDATA1[5] = ``

Increment TxCounter by 1:

TxCounter = 1 TxCounterCon = 0

Slave module accepts data (into a an out-data queue). TxCounterCon = TxCounter acknowledges.
(Data has not necessarily been transferred yet, though. Use COM_TxBusy to check the data transfer.)

TxCounter = 1 TxCounterCon = 1

TxNrofMsg := 4;

TxDATA1[0] = `W`

TxDATA1[1] = `o`

TxDATA1[2] = `r`

TxDATA1[3] = `l`

TxDATA1[4] = `d`

Increment TxCounter by 1:

TxCounter = 2 TxCounterCon = 1

Slave module accepts data. TxCounterCon = TxCounter acknowledges.

TxCounter = 2 TxCounterCon = 2

Receive Data

Initial state:

RxCounter = 0 RxCounterCon = 0

The module increments RxCounter by 1:

RxCounter = 1 RxCounterCon = 0

RxNrofMsg := 4;

RxDATA1[0] = `T`

RxDATA1[1] = `e`

RxDATA1[2] = `s`

RxDATA1[3] = `t`

If RxSync is enabled (object 2010 DataSync = RxSync), the module will not be allowed to send the next set of data until you set RxCounterCon = RxCounter. If RxSync is disabled, the module will send data without checking RxCounterCon.

RxCounter = 1 RxCounterCon = 1

Response to Errors

- EtherCAT error.
Sync Manager watchdog.
LED "Error" flashes 4x.
Unit changes from Op to Safe-Op.
Use "Reset Error" to acknowledge the error.

- Out-queue overflow (COM_TxQueueOvr).
Failure to send the data fast enough.
LED "Error" flashes 5x.
Use "Reset Error" to acknowledge the error.

- In-queue overflow (COM_RxQueueOvr).
Too much data is being received and cannot be transferred to the control unit fast enough.
LED "Error" flashes 6x.
Use "Reset Error" to acknowledge the error.

- TxCount error (TxCounterMiss).
The TxCounter received is not "last TxCounter + 1".
The gateway probably missed an EtherCAT frame. The EtherCAT master is sending the data too quickly (< 1ms for 9 messages).
LED "Error" flashes 7x.
Use "Reset Error" to acknowledge the error.

- Com controller wrror (COM_CtrlErr).
Indicates bit errors or overruns of the control unit concerned.
The applicable LED "COM State" is red and flashes rapidly or alternates green/red while communicating.
Use "Reset Error" to acknowledge the error.

Technical Data

RS485 Electrically insulated
 Baud rate 2400...115200 kBit/s
 Payload data Max. 152 bytes In/Out
 IO connection 18-pin
 Controller ASIC ET1200
 E-bus connector 10-pole system plug in side wall
 Terminating module not required
 Power supply Via E-bus
 E-bus load Max. 330 mA
 Part no. 694 455 02

Approval.....

5.7.2 RS232 2 Port

The module provides 2 RS232 interfaces accessible by EtherCAT.

Run CoE (CODESYS configuration tool) to set the parameters. The process image is the medium of data interchange. A [library can be downloaded](#) for this module.

Terminals

IO Connection, Male 18-pin

| Trm. | Signal | Explanation |
|------|--------|---------------------------|
| 0..9 | - | Not used |
| 10 | RxD1 | Channel 1 Rx data |
| 11 | TxD1 | Channel 1 Tx data |
| 12 | GND1 | Channel 1 earth potential |
| 13 | RxD2 | Channel 2 Rx data |
| 14 | TxD2 | Channel 2 Tx data |
| 15 | GND2 | Channel 2 earth potential |

Status LEDs

LED "EtherCAT Run"

The LED labelled "RN" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|------------------|----------------|-------------------------|
| Ok | Green, on | No error |
| Error | Red, 4x | EtherCAT watchdog |
| | Red, 5x | Transmit queue overflow |
| | Red, 6x | Receive queue overflow |
| | Red, 7x | No Tx counter |
| Start, defective | Red | Module not initialised |

LED "Power"

Not used

LEDs "Channel [COM State]"

The "Channel" LEDs indicate the state of every channel.

| State | LED | Explanation |
|-------|---------------------|--------------------------------|
| On | Green, flashing | Communication |
| Off | Off | No communication |
| Error | Red/green, flashing | Controller communication error |
| | Red, flashing | Controller error |

process image

There are 20 PDOs containing 8 bytes of data each for every direction. Use PDO Assignment (objects 1C12 and 1C13) to vary the volume of data. Taken together with the mailboxes (32 bytes each), this is the maximum configuration of ET1200.

Output Data (PLC -> IO, 0-160 Bytes)

| Name | Size | Source |
|----------------|---------|--------|
| ControlData | 8 bytes | PLC |
| TxData1[0..7] | 8 bytes | PLC |
| ... | ... | ... |
| TxData19[0..7] | 8 bytes | PLC |

The process image holds max. 152 bytes of payload data per direction.

ControlData:

| Name | Format | Source |
|--------------|----------|---|
| TxCounter | Word | Incrementing the TxCounter tells the gateway that the process image contains new data to be sent. |
| RxCounterCon | Word | If synchronised data (RxSync) is used, this object is used to acknowledge that the data received has been processed. Only then will the gateway send the next data. |
| TxNrOfMsg | Word | Number of bytes to be sent from the process image. Range: 0..152. Starting point of the data section is TxData1[0]. |
| ResetError | Bit (1) | Bit 0 ->1: Resets errors that have been removed. |
| unused 0..13 | Bit (14) | |
| TxComSwitch | Bit (1) | 0 -> COM1; 1-> COM2 |

Input Data (IO -> PLC, 0..160 Bytes)

| Name | Size | Source |
|----------------|---------|--------|
| StateData | 8 bytes | IO |
| RxData1[0..7] | 8 bytes | IO |
| ... | ... | ... |
| RxData19[0..7] | 8 bytes | IO |

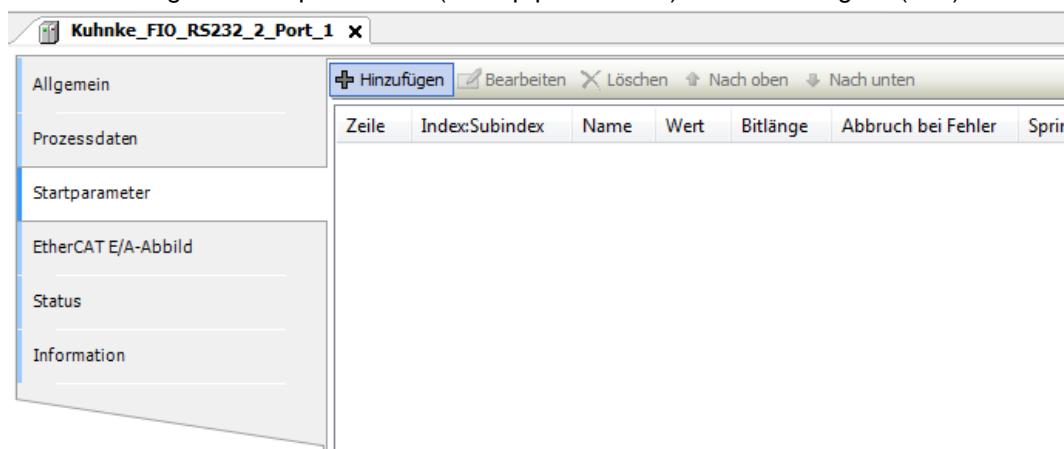

StateData:

| Name | Format | Source |
|-----------------|---------|---|
| TxCounterCon | Word | The gateway shows the TxCounter again to confirm the new out-queue data. |
| RxCounter | Word | Incrementing the RxCounter indicates that the process image contains new in-queue data. |
| RxNrOfMsg | Word | Number of bytes received by the process image. Range: 0..152. Starting point of the data section is RxData1[0]. |
| ResetErrorAck | Bit (1) | Acknowledges the state of the Reset Error signal. |
| EtherCATError | Bit (1) | If 1: Sync Manager watchdog triggered (watchdog control) |
| COM1_TxQueueOvr | Bit (1) | Overflow of the gateway's out-buffer (Com1). Too much data is being sent or the baud rate is too low. |
| COM1_RxQueueOvr | Bit (1) | In-buffer overflow (Com1). Data is being accepted too slowly. Either speed up the EtherCAT task or reduce the volume of data (lower baud rate). |
| TxCounterMiss | Bit(1) | The gateway checks the TxCounter for steady increments. This error indicates a skipped increment. Best use TxCounterCon to send new data. |
| unused 0 | Bit (1) | |
| COM2_TxQueueOvr | Bit (1) | Overflow of the gateway's out-buffer (Com2). Too much data is being sent or the baud rate is too low. |
| COM2_RxQueueOvr | Bit (1) | In-buffer overflow (Com2). Data is being accepted too slowly. Either speed up the EtherCAT task or reduce the volume of data (lower baud rate). |
| COM1_CtrlErr | Bit (1) | RS232 controller error (Com1) (bit error or overrun) |
| COM2_CtrlErr | Bit (1) | RS232 controller error (Com2) (bit error or overrun) |
| unused 1..3 | Bit (3) | |
| COM1_TxBusy | Bit (1) | Com1 is transferring data |
| COM2_TxBusy | Bit (1) | Com2 is transferring data |
| RxComSwitch | Bit (1) | 0 -> data received from Com1 1 -> data received from Com2 |

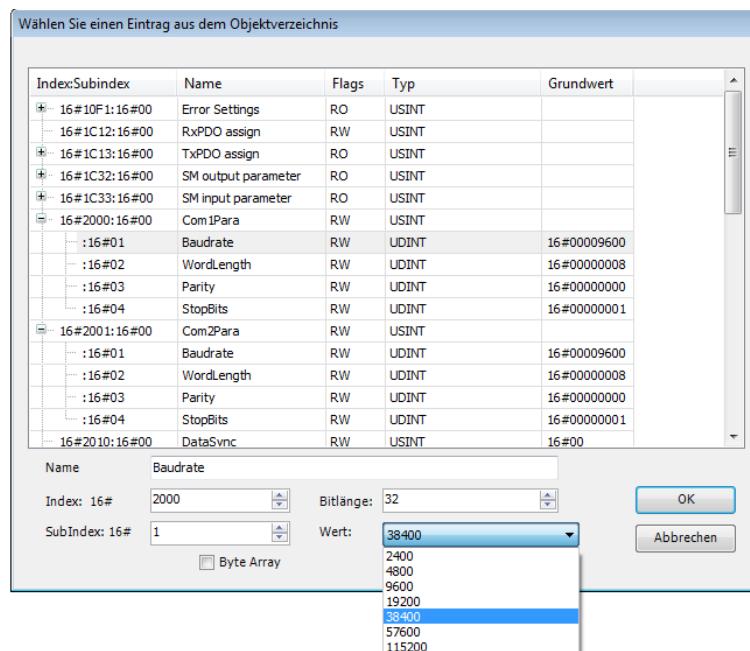

Configuration

Run CoE to configure the RS232 module. You can directly set the startup parameters.

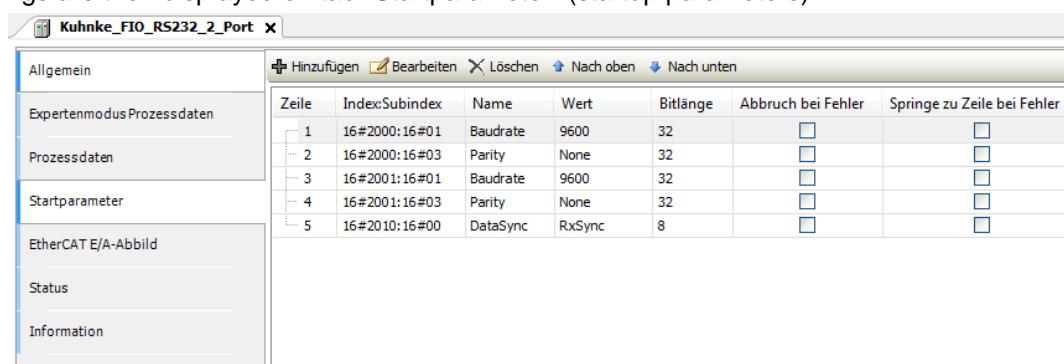

Select the module and go to "Startparameter" (startup parameters) and "Hinzufügen" (add).

Now go to ComParameter and change the Baud Rate or other settings as appropriate or enable/disable data synchronisation.

Your settings are then displayed on tab "Startparameter" (startup parameters).

Sample Program

The example below illustrates how a program works. It does not use library available for the communication module.

Visit Kendrion Kuhnke's Product Finder to download a sample project and the library.

Link: <http://productfinder.kuhnke.kendrion.com>

Run your development environment (e.g. CODESYS) to set the interface parameters, including the baud rate, parity, stop bits, etc.

Refer to section Object Dictionary. The settings are applied when PreOp turns into SafeOp.

Running SDO components to make changes in state Operational will therefore have no effect.

Transfer Data:

```
Initial state:TxCounter = 0           TxCounterCon = 0
TxComSwitch = 0 -> COM1, TxComSwitch = 1 -> COM2
TxNrOfMsg := 6;
TxData1[0] = `H`
TxData1[1] = `e`
TxData1[2] = `l`
TxData1[3] = `l
TxData1[4] = `o`
TxData1[5] = ``

Increment TxCounter by 1:
TxCounter = 1           TxCounterCon = 0
Slave module accepts data (into a an out-data queue). TxCounterCon = TxCounter acknowledges.
(Data has not necessarily been transferred yet, though. Use COM_TxBusy to check the data transfer.)

TxCounter = 1           TxCounterCon = 1
TxNrOfMsg := 4;
TxData1[0] = `W`
TxData1[1] = `o`
TxData1[2] = `r`
TxData1[3] = `l
TxData1[4] = 'd"

Increment TxCounter by 1:
TxCounter = 2           TxCounterCon = 1
Slave module accepts data. TxCounterCon = TxCounter acknowledges.
TxCounter = 2           TxCounterCon = 2
```

Receive Data:

```
Initial state:RxCounter = 0           RxCounterCon = 0
The module increments RxCounter by 1:
RxCounter = 1           RxCounterCon = 0
RxComSwitch = 0 -> COM1, RxComSwitch = 1 -> COM2
RxNrOfMsg := 4;
RxData1[0] = `T`
RxData1[1] = `e`
RxData1[2] = `s`
RxData1[3] = `t`
```

If RxSync is enabled (object 2010 DataSync = RxSync), the module will not be allowed to send the next set of data until you set RxCounterCon = RxCounter. If RxSync is disabled, the module will send data without checking RxCounterCon.

```
RxCounter = 1           RxCounterCon = 1
```

Response to Errors

- EtherCAT error.
Sync Manager watchdog.
LED "Error" flashes 4x.
Unit changes from Op to Safe-Op.
Use "Reset Error" to acknowledge the error.

- Out-queue overflow (COM1_TxQueueOvr, COM2_TxQueueOvr).
Failure to send the data fast enough.
LED "Error" flashes 5x.
Use "Reset Error" to acknowledge the error.

- In-queue overflow (COM1_RxQueueOvr, COM2_RxQueueOvr).
Too much data is being received and cannot be transferred to the control unit fast enough.
LED "Error" flashes 6x.
Use "Reset Error" to acknowledge the error.

- TxCount error (TxCounterMiss).
The TxCounter received is not "last TxCounter + 1".
The gateway probably missed an EtherCAT frame. The EtherCAT master is sending the data too quickly (< 1ms for 9 messages).
LED "Error" flashes 7x.
Use "Reset Error" to acknowledge the error.

- Com controller error (COM1_CtrlErr, COM2_CtrlErr).
Indicates bit errors or overruns of the control unit concerned.
The applicable LED "COM State" is red and flashes rapidly or alternates green/red while communicating.
Use "Reset Error" to acknowledge the error.

Technical Data

- RS232 Electrically insulated
 Baud rate 2400...115200 kBit/s
 Payload data Max. 152 bytes In/Out
 IO connection 18-pin, male
 Controller ASIC ET1200
 E-bus connector 10-pole system plug in side wall
 Terminating module not required
 Power supply Via E-bus
 E-bus load Max. 330 mA
 Part no. 694 455 04

Approval.....

5.7.3 CAN Master/Slave

The FIO CAN Master/Slave module is a layer 2 EtherCAT CAN gateway. CODESYS provides the higher-layer protocols (CANopen Master / Slave, etc.). The module is based on the EtherCAT slave stack version 5.11.

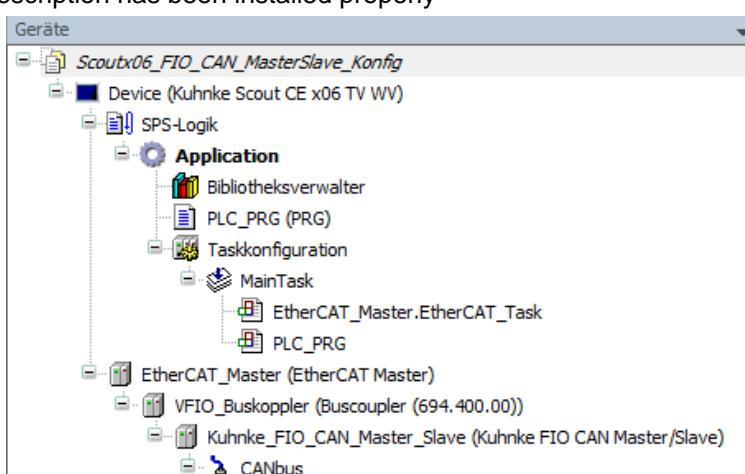

In CODESYS 3, the module provides a CANbus port that further configurations can be connected to. A device description available for CODESYS 3 contains all the required details. Mind that you also need the device driver (CAN Mini Driver).

Visit Kendrion Kuhnke's Product Finder to download the data you need. Please note the installation instructions.

Screen if the device description has been installed properly

Terminals

IO Connection, 18-pin, Male

| Trm. | Signal | Explanation |
|-------|-------------|-----------------------|
| 0 | CAN-H | CAN-High Signal |
| 1 | CAN-L | CAN-Low Signal |
| 2 | CAN-GND | earth potential |
| 3 | CAN-H Term. | Bus termination CAN-H |
| 4 | CAN-L Term. | Bus termination CAN-L |
| 5..15 | - | Not used |

Status LEDs

LED "EtherCAT Run"

The LED labelled "RN" indicates the state of the EtherCAT ASIC.

| State | LED flash code | Explanation |
|---------|----------------|---|
| Init | Off | Initialising, no data exchange |
| Pre-Op | Off/green, 1:1 | Pre-operational, no data exchange |
| Safe-Op | Off/green, 5:1 | Safe operation, inputs readable |
| Op | Green, on | Operational, unrestricted data exchange |

LED "IO"

The LED labelled "IO" indicates the state of the module's I/Os.

| State | LED flash code | Explanation |
|-------|----------------|-------------------------|
| Ok | Green, on | No error |
| Error | Red, 4x | EtherCAT watchdog |
| | Red, 5x | Transmit queue overflow |
| | Red, 6x | Receive queue overflow |
| | Red, 7x | No Tx counter |

LED "Power"

Not used

LEDs "Channel [COM State]"

The "Channel" LEDs indicate the state of every channel.

| LED colour, flash code | Explanation |
|---------------------------------|---------------------------------|
| Off | No communication |
| Green, flashing | Communication |
| Alternating red/green, flashing | CAN warning while communicating |
| Red, flashing | CAN warning |
| Red, on | CAN Bus Off |

Process Image

There are 20 PDOs containing 8 bytes of data each for every direction. Use PDO Assignment (objects 1C12 and 1C13) to vary the volume of data. Taken together with the mailboxes (32 bytes each), this is the maximum configuration of ET1200.

Output Data (PLC -> IO, 0-160 Bytes)

| Name | Size | Source |
|----------------|---------|--------|
| ControlData | 8 bytes | PLC |
| TxData1[0..7] | 8 bytes | PLC |
| ... | ... | ... |
| TxData19[0..7] | 8 bytes | PLC |

The CAN data in this data range are superposed. The data range can hold up to 9 CAN messages. If so, Rx/TxData19 stays blank.

ControlData:

| Name | Format | Source |
|--------------|----------|---|
| TxCounter | Word | Incrementing the TxCounter tells the gateway that the process image contains new data to be sent. |
| RxCounterCon | Word | If synchronised data (RxSync) is used, this object is used to acknowledge that the data received has been processed. Only then will the gateway send the next data. |
| TxNrOfMsg | Word | Number of CAN messages in the process image. Range: 0..9. |
| ResetError | Bit (1) | Bit 0 ->1: Resets errors that have been removed. |
| Unused 0..14 | Bit (15) | |

TxData1,2 / 3,4 / 5,6 / 7,8 / 9,10 / 11,12 / 13,14 / 15,16 / 17,18 :

| Byte | Name | Explanation |
|------|-----------------------|---|
| 0 | CanIdLowWordLowByte | CAN Identifier. |
| 1 | CanIdLowWordHighByte | ExtendedId = 0 -> 11 bit. |
| 2 | CanIdHighWordLowByte | ExtendedId = 1 -> 29 bit. |
| 3 | CanIdHighWordHighByte | |
| 4 | CanDataLength | Number of data bytes. Range: 0..8 |
| 5 | RemoteFrame | RemoteFrame = 1 -> no data, just request to send the identifier |
| 6 | ExtendendId | ExtendedId = 0 -> 11 bit, ExtendedId = 1 -> 29 bit. |
| 7 | Reserved | - |
| 8 | Data[0] | Payload data. |
| 9 | Data[1] | Only "CanDataLength" bytes are sent. |
| 10 | Data[2] | |
| 11 | Data[3] | |
| 12 | Data[4] | |
| 13 | Data[5] | |
| 14 | Data[6] | |
| 15 | Data[7] | |

Input Data (IO -> PLC, 0..160 Bytes)

| Name | Size | Source |
|----------------|---------|--------|
| StateData | 8 bytes | IO |
| RxData1[0..7] | 8 bytes | IO |
| ... | ... | ... |
| RxData19[0..7] | 8 bytes | IO |

StateData:

| Name | Format | Source |
|---------------|---------|---|
| TxCounterCon | Word | The gateway shows the TxCounter again to confirm the new out-queue data. |
| RxCounter | Word | Incrementing the RxCounter indicates that the process image contains new in-queue data. |
| RxNrOfMsg | Word | Number of CAN messages in the process image. Range: 0..9. |
| ResetErrorAck | Bit (1) | Acknowledges the state of the Reset Error signal. |
| EtherCATError | Bit (1) | If 1: Sync Manager watchdog triggered (watchdog control) |
| CanTxQueueOvr | Bit (1) | Overflow of the gateway's out-buffer. Too much CAN data is being sent or CAN bus the baud rate is too low. |
| CanRxQueueOvr | Bit (1) | In-buffer overflow. CAN data is being accepted too slowly. Either speed up the EtherCAT task or reduce the bus load. |
| TxCounterMiss | Bit(1) | The gateway checks the TxCounter for steady increments. This error indicates a skipped increment. Best use TxCounterCon to send new data. |
| CanWarning | Bit (1) | Indicates the CAN controller states "CAN Warning" and "Error Passive". These states are retained unless several frames are sent and received without errors. Reset Error is NOT required to acknowledge the bit. |
| CanBusOff | Bit(1) | Massive problems have changed the CAN controller's state to "bus off". The controller will quit this error state automatically. |
| Unused 0..5 | Bit (6) | |
| CanTxBusy | Bit(1) | 1: Data is being sent. |
| Unused 6..7 | Bit (2) | |

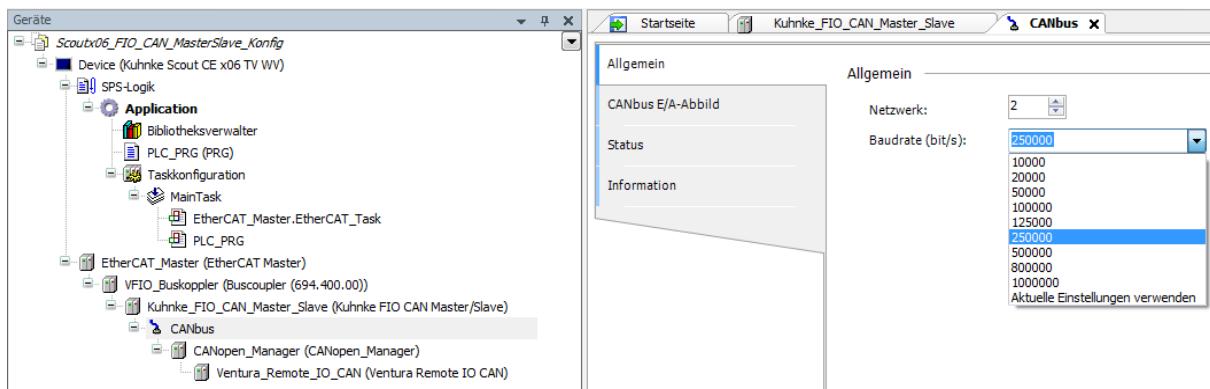

RxData1,2 / 3,4 / 5,6 / 7,8 / 9,10 / 11,12 / 13,14 / 15,16 / 17,18 :

| Byte | Name | Explanation |
|------|-----------------------|---|
| 0 | CanIdLowWordLowByte | CAN Identifier. |
| 1 | CanIdLowWordHighByte | ExtendedId = 0 -> 11 bit. |
| 2 | CanIdHighWordLowByte | ExtendedId = 1 -> 29 bit. |
| 3 | CanIdHighWordHighByte | |
| 4 | CanDataLength | Number of data bytes. Range: 0..8 |
| 5 | RemoteFrame | RemoteFrame = 1 -> no data, just request to send the identifier |
| 6 | ExtendendId | ExtendedId = 0 -> 11 bit, ExtendedId = 1 -> 29 bit. |
| 7 | Reserved | - |
| 8 | Data[0] | Payload data. |
| 9 | Data[1] | Only the number of bytes in "CanDataLength" is accepted. |
| 10 | Data[2] | |
| 11 | Data[3] | |
| 12 | Data[4] | |

| Byte | Name | Explanation |
|------|---------|-------------|
| 13 | Data[5] | |
| 14 | Data[6] | |
| 15 | Data[7] | |

Configuration

To set the baud rate, go down the device tree and find the CAN node immediately underneath the Kuhnke FIO CAN Master/Slave module.

Information

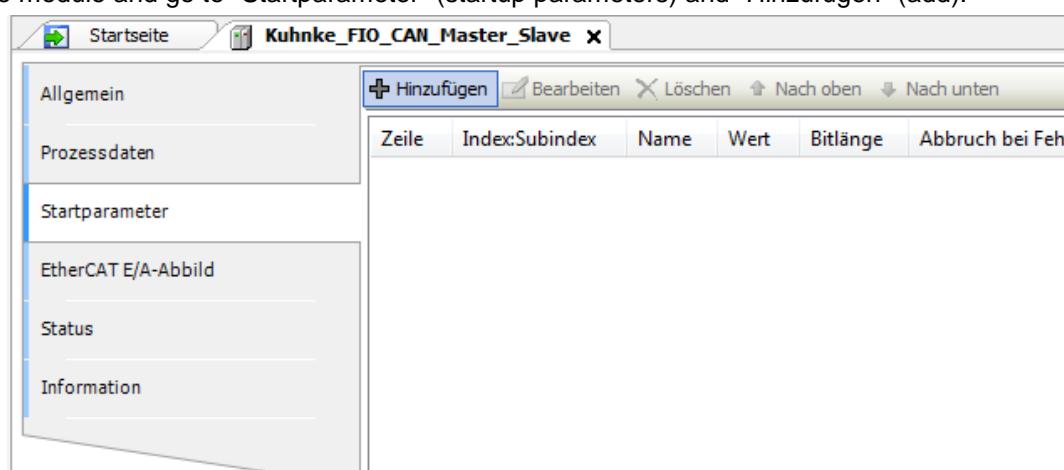

The Kuhnke FIO CAN Master/Slave module does NOT support all CODESYS baud rates (refer to the object dictionary).

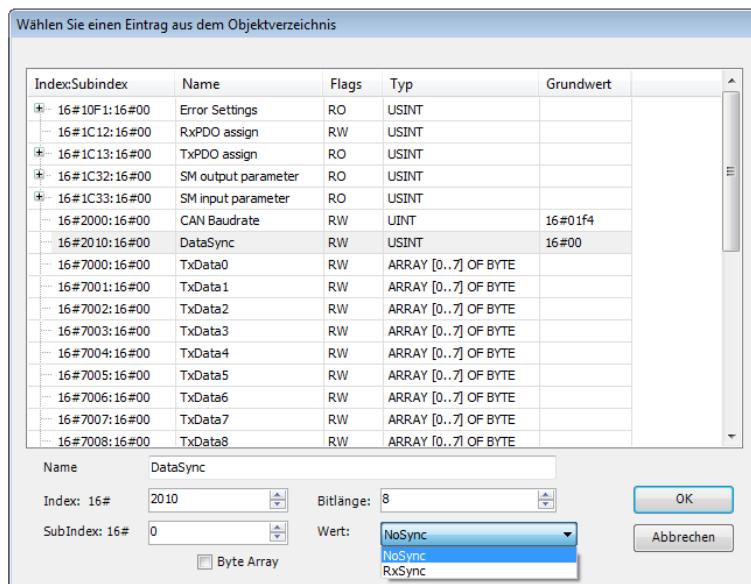

The following baud rates are supported:

- 100, 125, 250, 500 and 1000 kBit/s

Go to the startup parameters of the CAN module to enable or disable data synchronisation.

Select the module and go to "Startparameter" (startup parameters) and "Hinzufügen" (add).

Your settings are then displayed on tab "Startparameter" (startup parameters).

| Zeile | Index/Subindex | Name | Wert | Bitlänge | Abbruch bei Fehler | Springe zu Zeile bei Fehler |
|-------|----------------|----------|--------|----------|-------------------------------------|-------------------------------------|
| 1 | 16#2010:16#00 | DataS... | NoSync | 8 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |

Response to Errors

- EtherCAT error.
Sync Manager watchdog.
LED "Error" flashes 4x.
Unit changes from Op to Safe-Op.
Use "Reset Error" to acknowledge the error.
- Out-queue overflow (CanTxQueueOvr).
Failure to send the data fast enough across the CAN bus.
LED "Error" flashes 5x.
Use "Reset Error" to acknowledge the error.
- In-queue overflow (CanRxQueueOvr).
Too much data is being received via the CAN bus. and cannot be transferred to the control unit fast enough.
LED "Error" flashes 6x.
Use "Reset Error" to acknowledge the error.
- TxCount error (TxCounterMiss).
The TxCounter received is not "last TxCounter + 1".
The gateway probably missed an EtherCAT frame. The EtherCAT master is sending the data too quickly (< 1ms for 9 messages).
LED "Error" flashes 7x.
Use "Reset Error" to acknowledge the error.
- CAN warning.
Indicates the CAN controller states "CAN Warning" and "Error Passive". These states are retained unless several frames are sent and received without errors.LED "CAN" is red and flashes rapidly (or alternates between green and red while communicating).
"Reset Error" is NOT required to acknowledge the error.
- CAN Bus Off.
Massive problems have changed the CAN controller's state to "bus off". The controller will quit this error state automatically.LED "CAN" lights up red.
Use "Reset Error" to acknowledge the error.

Object Dictionary

| Index | Name | Type | Default | Min Max | Access |

Technical Data

CAN Master/Slave Electrically insulated
 Baud rate 100, 125, 250, 500 and 1000 kbit/s
 Payload data 9 frames of max. 8 bytes In/Out per EtherCAT cycle
 IO connection 18-pin, male
 Controller ASIC ET1200
 E-bus connector 10-pole system plug in side wall
 Terminating module not required
 Power supply Via E-bus
 E-bus load Max. 330 mA
 Part no. 694 455 06

Approval.....

5.8 Safety Modules

5.8.1 Kuhnke FIO Safety PLC

There is a separate instruction manual available for the Kuhnke FIO Safety PLC. For further information, please click the link below.

Link to the documentation: <http://productfinder.kuhnke.kendrion.com>

Technical Data

| | |
|----------------------------------|--|
| Type | Safety control unit |
| Safety protocol | FSoE |
| Safety standard | IEC 61508 SIL3 and DIN EN ISO 13849-1 PLe |
| Approval | CE, cULus, TÜV Rheinland |
| Runtime system | CODESYS RT Safety |
| Programming tool | CODESYS v3.5 SP5 or higher with integrated safety function modules |
| E-bus power consumption | 200 mA – 300 mA |
| Supply voltage | From bus coupler through E-bus connector |
| Electrical interference | EN 61000-6-2/EN 61000-6-4 |
| Resistance to vibration | EN 60068-2-6 |
| Impact resistance | EN 60068-2-27 |
| Fieldbus port | EtherCAT® 100 Mbps LVDS: E-bus |
| Installation / mounting position | 35 mm DIN rail / horizontal |
| Signal indication | Status LEDs (EtherCAT, Safety, Power) |
| Shield | Provided directly by the module |
| Terminals | - |
| Ambient conditions | 0 °C ...+55 °C, IP 20 |
| Housing | Plastic shroud over aluminium frame, 25 x 120 x 90 [mm] |

5.8.2 Kuhnke FIO Safety SDI4 SDO2

There is a separate instruction manual available for Kuhnke FIO Safety I/O. For further information, please click the link below.

Link to the documentation: <http://productfinder.kuhnke.kendrion.com>

Technical Data

| | |
|----------------------------------|---|
| Type | Safe input / output terminal |
| Safety protocol | FSoE |
| Safety standard | IEC 61508 SIL3 and DIN EN ISO 13849-1 PLe |
| Number of inputs | 4 safe inputs (configurable properties) |
| Number of outputs | 2 safe outputs ($I_{max} = 2.0 \text{ A}$) |
| Clock pulse outputs (OSSD) | 4 |
| Response time | < 1 ms (read input, write to E-bus) |
| Error response time | \leq watchdog time (configurable) |
| Extended diagnostic information | Via CoE |
| E-bus power consumption | 275 mA |
| Supply voltage | 24 VDC (-15 % / +20 %) |
| Electrical interference | EN 61000-6-2/EN 61000-6-4 |
| Resistance to vibration | EN 60068-2-6 |
| Impact resistance | EN 60068-2-27 |
| Fieldbus port | EtherCAT® 100 Mbps LVDS: E-bus |
| Installation / mounting position | 35 mm DIN rail / horizontal |
| Signal indication | LEDs per I/O: locally allocated to the terminal point, status LEDs: EtherCAT, Safety, Power |
| Shield | Provided directly by the module |
| Terminals | 18-pin spring-assisted connector with mechanical ejector |
| Ambient conditions | 0 °C ...+55 °C, IP 20 |
| Housing (W x H x D) | Plastic shroud over aluminium frame, 25 x 120 x 90 [mm] |
| Approval | CE, EtherCAT Conformance tested, cULus, TÜV Rheinland |

5.8.3 Kuhnke FIO Safety SDI8 SDO2

There is a separate instruction manual available for Kuhnke FIO Safety I/O. For further information, please click the link below.

Link to the documentation: <https://productfinder.kuhnke.kendrion.com>

Technical Data

| | |
|----------------------------------|---|
| Type | Safe input / output terminal |
| Safety protocol | FSoE |
| Safety standard | IEC 61508 SIL3 and DIN EN ISO 13849-1 PLe |
| Number of inputs | 8 safe inputs (configurable properties) |
| Number of outputs | 2 safe outputs ($I_{max} = 2.0 \text{ A}$) |
| Clock pulse outputs (OSSD) | 4 |
| Response time | < 1 ms (read input, write to E-bus) |
| Error response time | \leq watchdog time (configurable) |
| Extended diagnostic information | Via CoE |
| E-bus power consumption | Typ. 210 mA (max. 300 mA) |
| Supply voltage | 24 VDC (-15 % / +20 %) |
| Electrical interference | EN 61000-6-2/EN 61000-6-4 |
| Resistance to vibration | EN 60068-2-6 |
| Impact resistance | EN 60068-2-27 |
| Fieldbus port | EtherCAT® 100 Mbps LVDS: E-bus |
| Installation / mounting position | 35 mm DIN rail / horizontal |
| Signal indication | LEDs per I/O: locally allocated to the terminal point, status LEDs: EtherCAT, Safety, Power |
| Shield | Provided directly by the module |
| Terminals | 18-pin spring-assisted connector with mechanical ejector |
| Ambient conditions | 0 °C ...+55 °C, IP 20 |
| Housing (W x H x D) | Plastic shroud over aluminium frame, 25 x 120 x 90 [mm] |
| Approval | CE, EtherCAT Conformance tested, cULus, TÜV Rheinland |

5.8.4 Kuhnke FIO Safety SDI16 SDO4

There is a separate instruction manual available for Kuhnke FIO Safety I/O. For further information, please click the link below.

Link to the documentation: <https://productfinder.kuhnke.kendrion.com>

Technical Data

| | |
|----------------------------------|---|
| Type | Safe input / output terminal |
| Safety protocol | FSoE |
| Safety standard | IEC 61508 SIL3 and DIN EN ISO 13849-1 PLe |
| Number of inputs | 16 safe inputs (configurable properties) |
| Number of outputs | 4 safe outputs ($I_{max} = 2.0 \text{ A}$) |
| Clock pulse outputs (OSSD) | 8 |
| Response time | < 1 ms (read input, write to E-bus) |
| Error response time | \leq watchdog time (configurable) |
| Extended diagnostic information | Via CoE |
| E-bus power consumption | Typ. 210 mA (max. 300 mA) |

| Terminals | 36-pin spring-assisted connector with mechanical ejector |
| Ambient conditions | 0 °C ...+55 °C, IP 20 |
| Housing (W x H x D) | Plastic shroud over aluminium frame, 25 x 120 x 90 [mm] |
| Approval | CE, EtherCAT Conformance tested, cULus, TÜV Rheinland |

6 Accessories

6.1 Power Distributor 2 x 16

Front view of power distributor

Power connectors

Terminals

The power distribution module 2 x 16 has two separate power lines.

It picks up the potential fed to connections L1 and L2 (0 VDC or 24 VDC, to the operator's discretion) and distributes its among the connections 0 to 15 along the same line.

The E-bus is fed through from the upstream to the downstream module.

Status LEDs

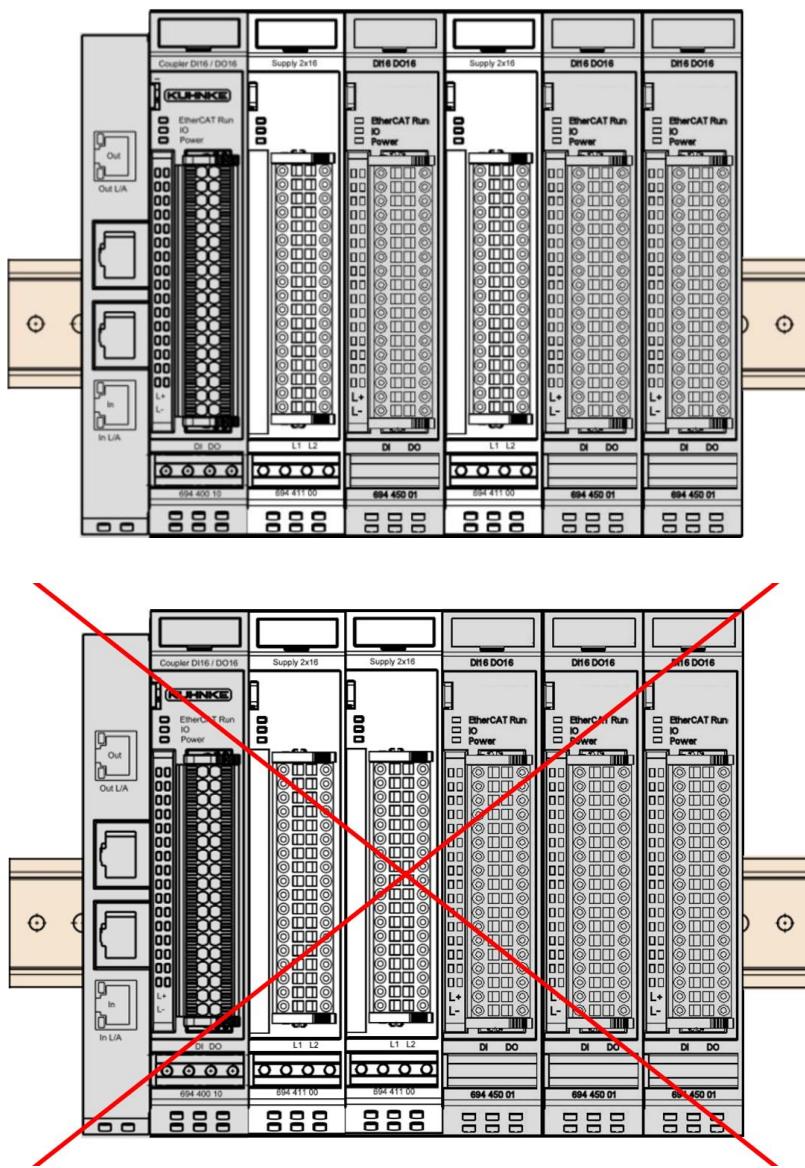

None.

Function

2-wire or 3-wire connection of digital IO modules.

Mounting

When mounting, you should make sure that you do not mount several potential distributors next to each other to prevent possible EMC problems. Please note the following connection example:

Technical Data

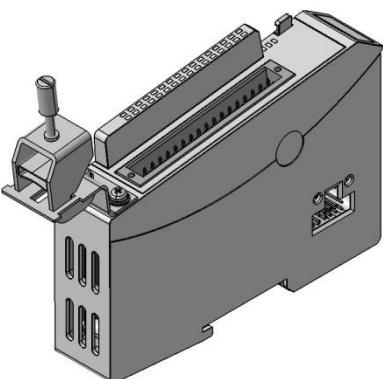

Power Distributor 2 x 16

| | |
|------------------------|----------------------------------|
| Power connection | 36-pin male |
| E-bus connector | 10-pole system plug in side wall |
| E-bus load..... | none |
| Part no. | 694.411.00 |

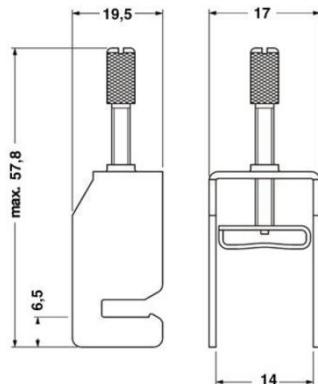

Approval:.....

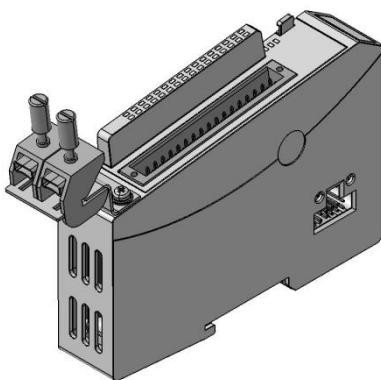

6.2 Shield Terminal

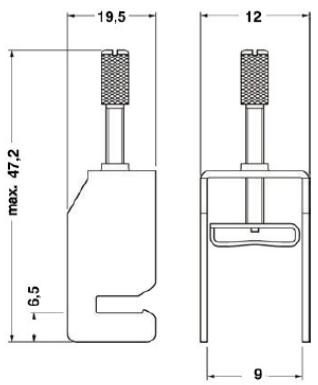

Shield terminal 1x14mm

Dimensions

Shield terminal 2x8mm

Dimensions

Terminals

The shield terminal assembly consists of the actual shield terminal, the terminal bracket, two M3x5 screws, 2 washers, and 2 spring washers. Use the 2 screws, washers and spring washers to mount the terminal bracket on the housing mount of the Kuhnke FIO module. Screw the screws into the 2 holes tapped into the bottom of the front side.

Function

The shield terminal makes it easier for you to connect the cable shield. The terminal deflects the cable shield power to the DIN rails that the Kuhnke FIO module is snapped on to.

NOTE

Verify that the DIN rail is properly earthed.

NOTE

Do not use the shield terminals as a strain relief.

Technical Data

Shield Terminal 2x8mm

Shield terminals, 8mm 2 pcs:
Part no. 694.412.01

Shield Terminal 14mm

Shield terminals, 14mm 1 pcs:
Part no. 694.412.02

7 Configuration

The EtherCAT master needs to be configured to drive the EtherCAT network.

One major part of the configuration is to specify the EtherCAT slave stations.

There are two ways of documenting the properties of an EtherCAT slave.

1. The basic properties are stored in an EEPROM of the slave, whereas a XML device file (ESI file) describes the others.
2. All of the properties are stored in an EEPROM of the slave. (This method is not supported by every OEM supplier.)

The XML device files provide EtherCAT administrators with convenient options.

EtherCAT allows both, a configuration offline and the scanning of station data via an Ethernet line (online configuration).

The examples below are based around the standard ETG configuration tool (EtherCAT configuration tool supplied by Beckhoff Automation GmbH) which accesses the XML device files for both offline and online configuration.

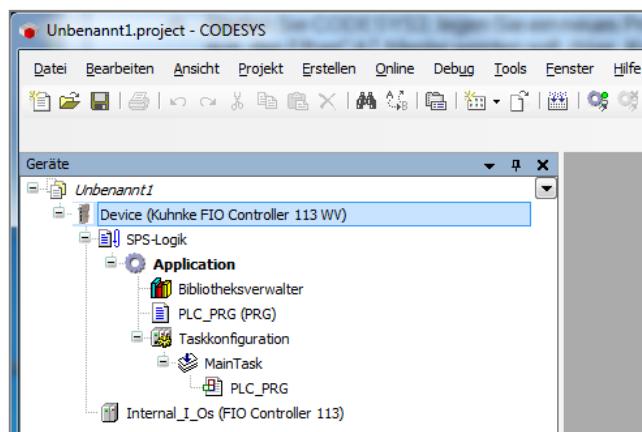

The file to use for Kuhnke FIO is called "KuhnkeEtherCATModulesAll.xml".

Copy file "KuhnkeEtherCATModulesAll.xml" to folder C:\Programs\EtherCAT Configurator\EtherCAT or, if you are using another tool, to the folder set for that tool.

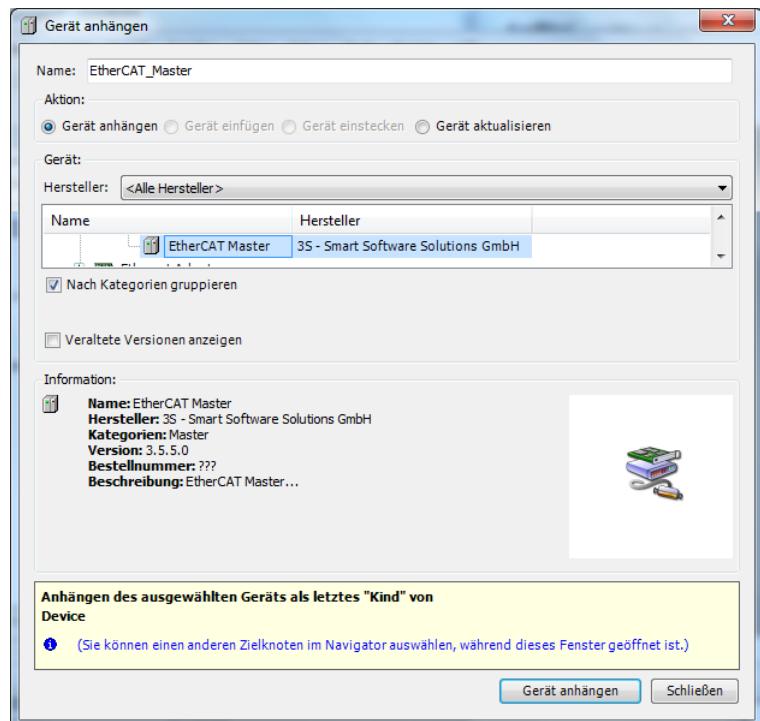

7.1 CODESYS V3 (CODESYS Configurator)

Offline Configuration

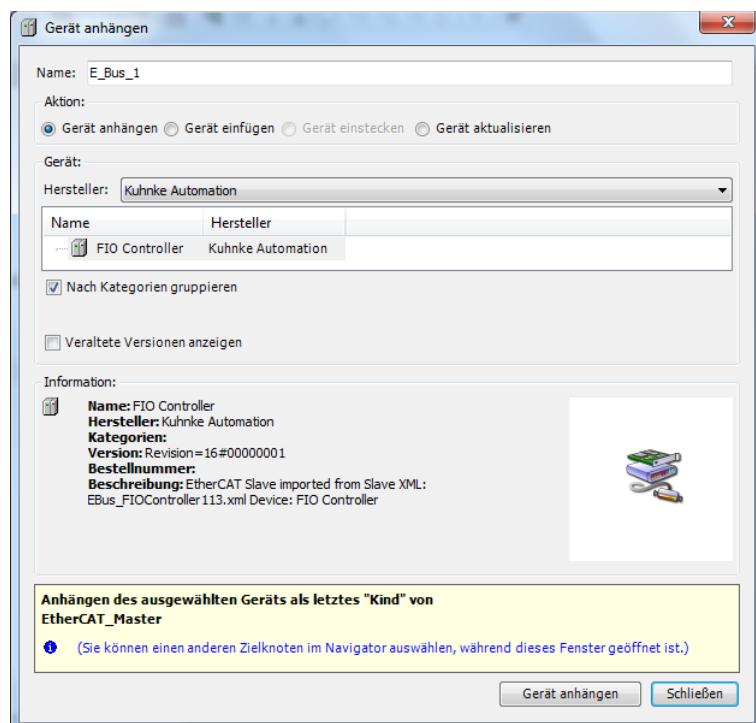

- Run CODESYS3, create a new project (default project), and select the device to become the EtherCAT master (here: "Kuhnke FIO Controller 113 WV").

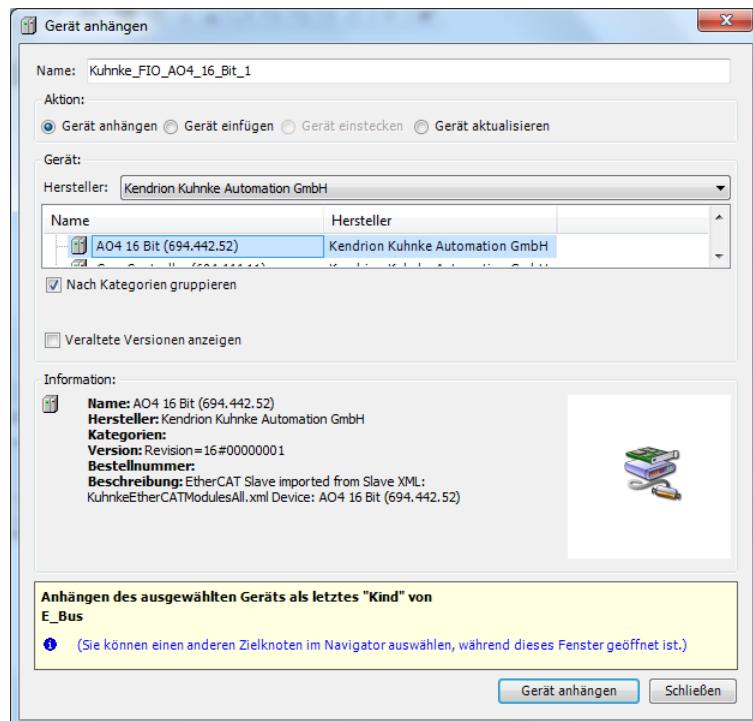

- Highlight the device and pick the 3S "EtherCAT Master" from the right-click menu.

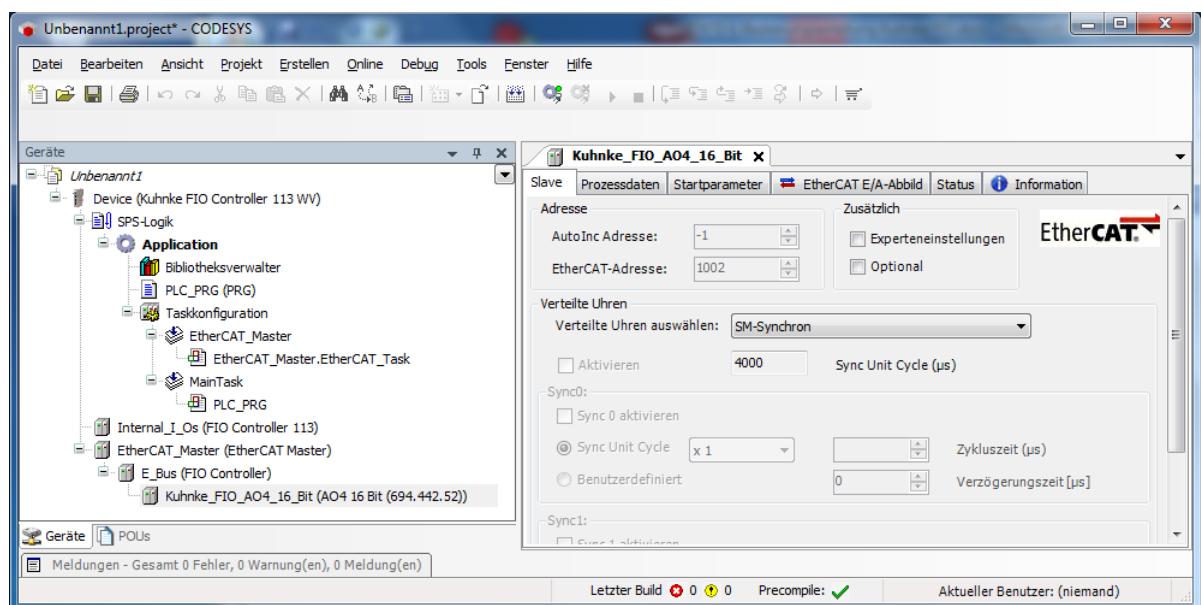

- Go down the list of devices, pick "EtherCAT_Master (EtherCAT Master)", and add Kuhnke Automation's "FIO Controller".

- Go down the list of devices, pick "E-Bus (FIO Controller)", and add Kendrion Kuhnke Automation's "AO4 16Bit".

- Now highlight "Kuhnke_FIO_AO4_16Bit" in the list of devices and make the appropriate settings on the right-hand side (see section "AO4 16Bit").

- Keep repeating the last two steps until your configuration is complete.

If the configuration is complete and all devices are connected to the programming PC, you can log in and run the configuration tool to test your Kuhnke FIO modules.

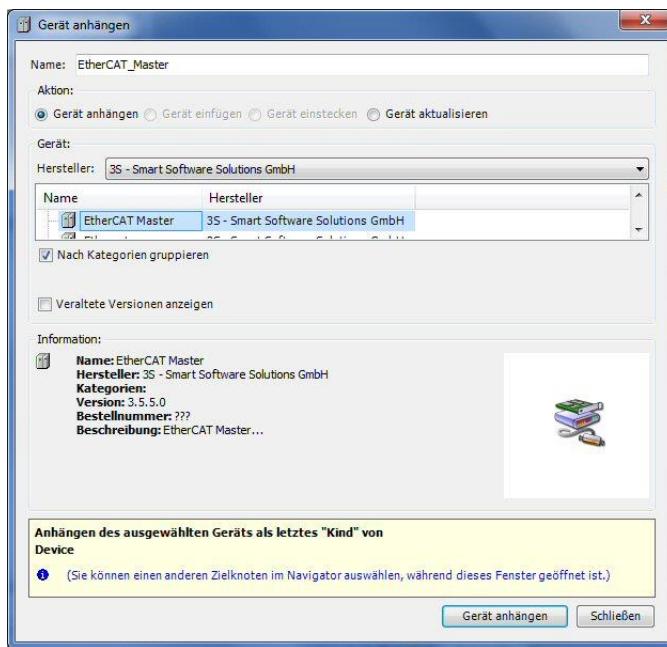

DANGER

Set outputs only if you are sure that this will cause no harm.

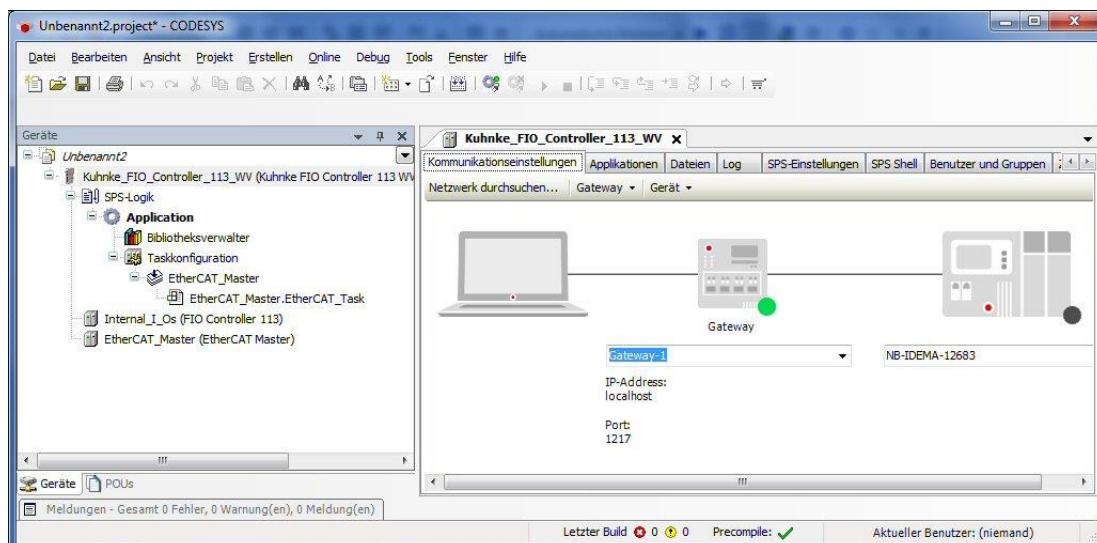

Online Configuration

EtherCAT allows you to scan the stations connected to an Ethernet line. The example below illustrates how to identify the actual configuration of an I/O unit consisting of a Kuhnke Controller 113, a Kuhnke FIO AI8-I module, and a Kuhnke FIO AI8-Pt/Ni/Tc module.

- Connect Kuhnke Controller 113 to the Kuhnke FIO AI8-I module and the Kuhnke FIO AI8-Pt/Ni/Tc module and turn on the power supply.
- Use a CAT5 cable to connect your PC's Ethernet port to your CoDeSys3 control unit (Kuhnke Controller 113) (both a patch cable and a crossover cable will work).
- Run CoDeSys V3.
- Open a project for your CoDeSys3 control unit (Kuhnke Controller 113).
- Select "Device (.....Kuhnke FIO Controller 113)" and pick "Gerät anhängen" (add device).

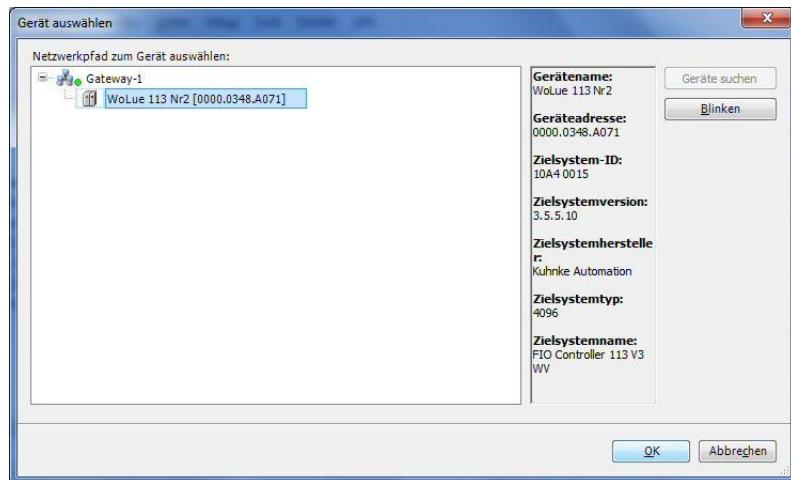

- Configure an EtherCAT master by adding an "EtherCAT Master" supplied by 3S-Smart Software Solutions GmbH to your device.

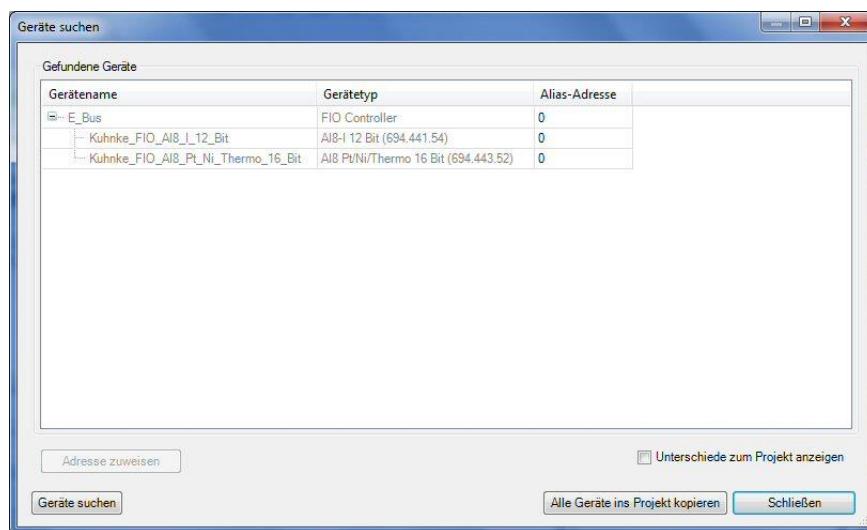

- Select "Device (....Kuhnke FIO Controller 113)" and choose "Netzwerk durchsuchen" (search network).

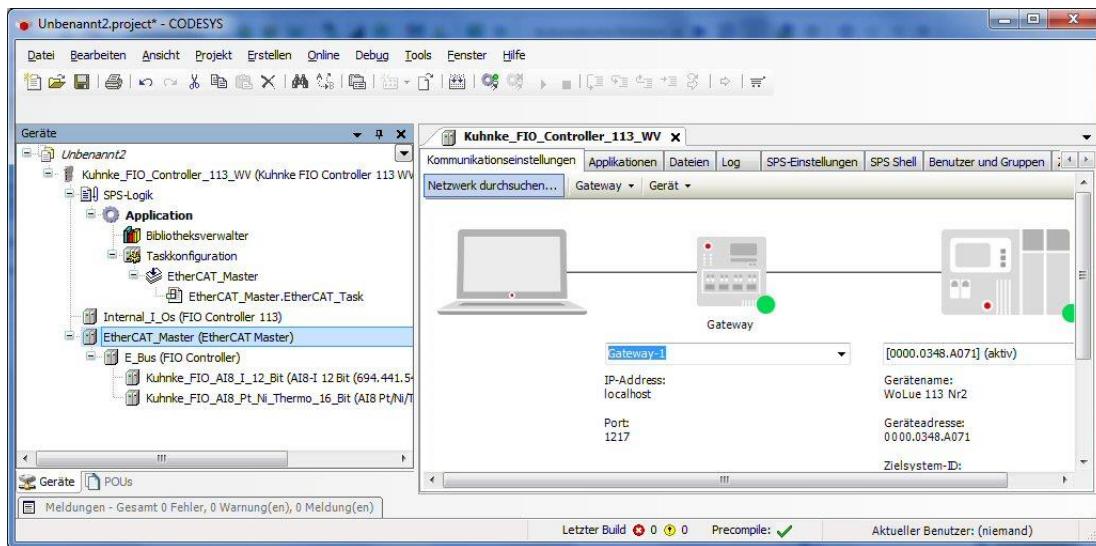

The software now scans the Ethernet network and finds the CoDeSys3 control unit connected to it.

- Now select "EtherCAT_Master" and choose "Netzwerk durchsuchen" (search network). CoDeSys scans your EtherCAT configuration.

- Click on "Alle Geräte ins Projekt kopieren" (copy all devices to the project). You have added your actual EtherCAT configuration to your project.

- Test the EtherCAT IOs.

**DANGER**

Set outputs only if you are sure that this will cause no harm.

8 Appendix

8.1 Technical Data (Summarised)

System Properties of Kuhnke FIO

| | |
|---------------------------------------|---|
| Fieldbus | EtherCAT 100 Mbit/s |
| Dimensions | 25mm x 120mm x 90mm (W x H x D) |
| Housing mount | aluminium |
| Shield..... | connects directly to the module housing |
| Installation..... | 35mm DIN rail |
| IO connection..... | spring-assisted combi plug with mechanical ejector, 4 ... 36-pin |
| Signal indication | LED, local assignment to terminal |
| Diagnostics | LED: bus state, module state, broken wire/excessive current |
| Numer of connectors | up to 32 digital I/Os and 8 analogue channels per module |
| Supply voltage | 24 VDC -20% / +25% |
| Overvoltage category | Overvoltage category 2 |
| Numer of I/O modules | 20 per bus coupler (total max. power consumption: 3A) |
| Electrical insulation..... | modules electrically insulated from one another and from the bus |
| Length of analogue signal lines | < 30m |
| Storage temperature..... | -25 ...+ 70 [°C] |
| Working temperature | 0...+ 55 [°C] |
| Rel. humidity | 5...95 [%], non-condensing |
| Protection | IP20 |
| Immunity to noise | Zone B to EN 61131-2, mounted on earthed DIN rail in earthed control cubicle |
| Permitted operating environment | Operation only permitted in an environment that at least complies with degree of protection IP54 according to IEC 60529 (eg suitable control cabinet) |

Bus Coupler

Kuhnke FIO bus coupler

| | |
|-------------------|--|
| Part no. | 694.400.00 |
| Fieldbus | EtherCAT 100 Mbit/s 100 Base TX to IEEE802.3 |
| Connection..... | 2x RJ45 |
| Controller | ASIC ET1100 |
| Extension..... | connection to first Kuhnke FIO I/O module integrated in side panel of module |
| Diagnostics | LED: EtherCAT module state EtherCAT In/Out state |

Kuhnke FIO Bus Coupler DI16/DO16

| | |
|------------------|--|
| Part no. | 694.400.10 |

Digital FIO Modules

Kuhnke FIO DI16/DO16 1ms/0.5A

Part no. 694.450.03
Digital inputs 16, 1 ms delay
Digital outputs 16, load: 0.5 A, high-side semiconductor

Kuhnke FIO DI16/DO16 5ms/0.5A

Part no. 694.450.01
Digital inputs 16, 5 ms delay
Digital outputs 16, load: 0.5 A, high-side semiconductor

Kuhnke FIO DI16/DO16 1ms/0.5A LS

Part no. 694.450.13
Digital inputs 16, 1 ms delay, low-side
Digital outputs 16, load: 0.5 A, low-side semiconductor

Kuhnke FIO DI16/DO8 1ms/1A

Part no. 694.450.02
Digital inputs 16, 1 ms delay
Digital outputs 8, load: 1 A, high-side semiconductor

Kuhnke FIO DI8/DO8 1ms/0.5A

Part no. 694.450.05
Digital inputs 8, 1 ms delay
Digital outputs 8, load: 0.5 A, high-side semiconductor

Kuhnke FIO DI8/DO8 5ms/0.5A

Part no. 694.450.04
Digital inputs 8, 5 ms delay
Digital outputs 8, load: 0.5 A, high-side semiconductor

Kuhnke FIO DI16 1ms

Part no. 694.451.03
Digital inputs 16, 1 ms delay

Kuhnke FIO DI16 2-wire

Part no. 694.451.43
Digital inputs 16, 1 ms delay
+16 x 24V each max. 1A

Kuhnke FIO DI32 1ms

Part no. 694.451.02
Digital inputs 32, 1 ms delay

Kuhnke FIO DO8 1A

Part no. 694.452.02
Digital outputs 8, load: 1 A, high-side semiconductor

Kuhnke FIO DO8 2A

Part no. 694.452.06
Digital outputs 8, load: 2 A (Σ max. 10A), high-side semiconductor,

Kuhnke FIO DO16 0.5A

Part no. 694.452.01
Digital outputs 16, load: 0.5 A, high-side semiconductor

Kuhnke FIO DO16 2-wire

Part no. 694.452.41
Digital outputs 16, load: 1 A, high-side semiconductor
+16 Ground connections

Kuhnke FIO DO8 NO Relay 24V

Part no. 694.452.03
Digital outputs 8, load: 5A (resistive) / 2A (inductive), n.o. relay
Switching voltage..... max. 24 VDC / VAC

Kuhnke FIO DO8 NO Relay 230 VAC

Part no. 694.452.04
Digital outputs 8, load: 5A (resistive) / 2A (inductive), n.o. relay
Switching voltage..... max. 24 VDC/ 230 VAC

Analogue FIO Modules**Kuhnke FIO AI4, 12 Bit / AO4, 16Bit**

Part no. 694.444.65
Analogue Inputs..... 4
Resolution 12 Bit
Output signal..... 0..10V, (0→10V: $\leq 22\mu s$ at $2k\Omega$ / $<200pF$)
0..20mA, 4..20mA, (0→16V: $\leq 25\mu s$ at 300Ω / $<1mH$)

| | |
|------------------------|---|
| Output frequency | DC-synchron, SM-synchron |
| Analogue outputs..... | 4 |
| Resolution | 16 Bit |
| Output signal | 0..10V, +/- 10V, (0→10V: ≤22µs at 2kΩ/<200pF) 0..20mA, 4..20mA, 0..24mA, (0→16V: ≤25µs at 300Ω/<1mH) |
| Output frequency | DC-synchron, SM-synchron |

Kuhnke FIO AO4, 16-Bit

| | |
|------------------------|---|
| Part no. | 694.442.52 |
| Analogue outputs..... | 4 |
| Resolution..... | 16 bit |
| Output signal | 0..10V, +/- 10V, (at loads > 1kΩ, <1µF) 0..20mA, 4..20mA, 0..24mA, (at loads < 500Ω, <1mH) (channels configure separately), |
| Output frequency | synchronised with DC / SM |

Kuhnke FIO AO4, 12-Bit

| | |
|------------------------|--|
| Part no. | 694.442.02 |
| Analogue outputs..... | 4 |
| Resolution..... | 12 bit |
| Output signal | 0..10V, +/- 10V, (at loads > 1kΩ, <1µF) 0..20mA, 4..20mA, 0..24mA, (at loads < 500Ω, <1mH) (configurable), |
| Output frequency | 220 µs (constant) |

Kuhnke FIO AI4/8-U 13-Bit

| | |
|-----------------------|---|
| Part no. | 694.441.52 |
| Analogue inputs..... | 4x differential signal or 8x single-ended |
| Resolution..... | 13 bit |
| Measuring range | 0...10V, +/- 10V, +/- 5V, +/- 2.5V |
| Conversion time..... | 464 µs (all channels) |

Kuhnke FIO AI8/16-U 13-Bit

| | |
|-----------------------|--|
| Part no. | 694.441.53 |
| Analogue inputs..... | 8x differential signal or 16x single-ended |
| Resolution..... | 13 bit |
| Measuring range | 0...10V, +/- 10V, +/- 5V, +/- 2.5V |
| Conversion time..... | 580 µs (all channels) |

Kuhnke FIO AI4-I 12-Bit

| | |
|----------------------|----------------------|
| Part no. | 694.441.51 |
| Analogue inputs..... | 4 |
| Resolution..... | 12 bit |
| Measuring range..... | 0 ... 20mA, 4...20mA |
| Conversion time..... | 235 µs (4 channels) |

Kuhnke FIO AI8-I 12-Bit

| | |
|---------------|------------|
| Part no. | 694.441.54 |
|---------------|------------|

| | |
|-----------------------|---------------------|
| Analogue inputs | 8 |
| Resolution..... | 12 bit |
| Measuring range..... | 0 ...20mA, 4...20mA |
| Conversion time..... | 290 µs (8 channels) |

Kuhnke FIO AI4-Pt/Ni/TC 16-Bit

| | |
|-----------------------|---|
| Part no. | 694.443.51 |
| Analogue inputs | 4 |
| Resolution..... | 16 bit |
| Measuring range | mV, Pt100, Pt1000, Ni100, Ni1000DIN43760, thermalcouple types K, J |
| Conversion time..... | 50 ms (adjustable) |

Kuhnke FIO AI8-Pt/Ni/TC 16-Bit

| | |
|-----------------------|---|
| Part no. | 694.443.52 |
| Analogue inputs | 8 |
| Resolution..... | 16 bit |
| Measuring range | mV, Pt100, Pt1000, Ni100, Ni1000DIN43760, thermalcouple types K, J |
| Conversion time..... | 50 ms (adjustable) |

Mixed I/O Modules

Kuhnke FIO MIX 02

| | |
|--------------------------|---|
| Part no. | 694.444.62 |
| Digital inputs | 4x 1ms, 1x 0.1ms, 3x 0.001 ms delay |
| Digital outputs | 8x 0.5A, 16x 0.1A |
| Counters | 1 (clock, direction, reset) |
| Counting frequency | 500 kHz (up to 1 MHz) |
| Analogue inputs | 4x 0..+10 V, 12 bit |
| RS485..... | 2.4..921.6 kBit/s, electrically insulated |

Counter / Posi / Drive / CAM Modules

Counter2 5V

| | |
|--------------------------|---|
| Part no. | 694.444.01 |
| Encoder inputs..... | 2 |
| Counting frequency | max. 200 kHz |
| Digital inputs | 8, 1 ms delay |
| Digital outputs | 2, load: 2.0 A, high-side semiconductor |

Kuhnke FIO CounterPosi2 5V

| | |
|--------------------------|---------------|
| Part no. | 694.454.01 |
| Encoder inputs..... | 2 |
| Counting frequency | max. 200 kHz |
| Digital inputs | 8, 1 ms delay |

Digital outputs 2, load: 2.0 A, high-side semiconductor
Analogue outputs 2, -10V..+10 V, 12 bit

Interface and Communication Modules

Kuhnke FIO RS485 1 Port

Part no. 694.455.02
Serial interface RS485, electrically insulated
Baud rate 2400...115200 Bit/s
Payload data max. 152 bytes In/Out

Kuhnke FIO RS232 2 Port

Part no. 694.455.04
Serial interface 2x RS232, electrically insulated
Baud rate 2400...115200 Bit/s
Payload data max. 152 bytes In/Out

Kuhnke FIO CAN Master/Slave

Part no. 694.455.06
Serial interface RS485, electrically insulated
Baud rate 100, 125, 250, 500 and 1000 kbit/s
Payload data 9 frames of max. 8 bytes In/Out per EtherCAT cycle

9 Sales & Service

Please visit our Internet site to find a comprehensive overview of our sales and service network including all the relevant addresses. Feel free to also contact us at our headquarters in Malente/Germany

The screenshot shows the homepage of the Kendrion Kuhnke Automation GmbH website. At the top left is the Kendrion logo with the tagline "WE MAGNETISE THE WORLD". To the right is the text "INDUSTRIAL CONTROL SYSTEMS". A horizontal menu bar follows, with links for Home, Products, Industries, Customised Solutions, About us, News, Press, Career, and Contact. Below the menu is a large photograph of a red brick building with a glass-enclosed entrance, identified as the Malente headquarters. Overlaid on the photo is the text "Herzlich Willkommen bei Kendrion Kuhnke Automation Industrial Control Systems". To the right of the photo is a navigation bar with five numbered circles (1-5). Below the main image are four smaller boxes, each representing a product line: "Kuhnke Control Technology" (with a "To the control technology" button), "Kuhnke Solenoid Technology" (with a "To the solenoid technology" button), "Kuhnke Pneumatic and Fluid Technology" (with a "To the pneumatic and fluid technology" button), and "Arriva Control Technology Mobile Automation" (with a "To the mobile control technology" button). Each box contains a small image of the respective products.
